

HEAL Data Platform

Robert L. Grossman

L. Philip Schumm

The Standard Model for Data Sharing

Evolution of Data Platforms

Research Project with Download

Databases
(1982)

- Data repositories
- Download data

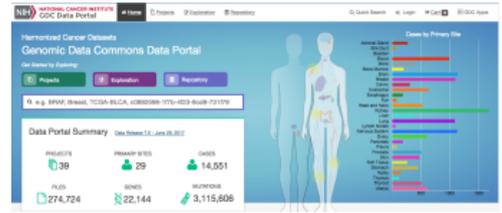

Research Project with Cloud Computing

Data Clouds
(2010)

- Support for large-scale data and computing

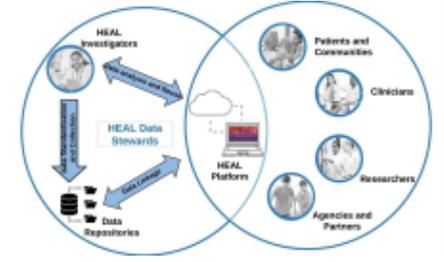

Single Research Community

Data Commons
(2016)

- Common data models
- Core data services
- Governance
- Workspaces

Multiple Research Communities

Data Ecosystems
(2020)

Source: Grossman, Robert L. "Data lakes, clouds, and commons: A review of platforms for analyzing and sharing genomic data." Trends in Genetics 35, no. 3 (2019): 223-234.

Data Ecosystems

Research Community

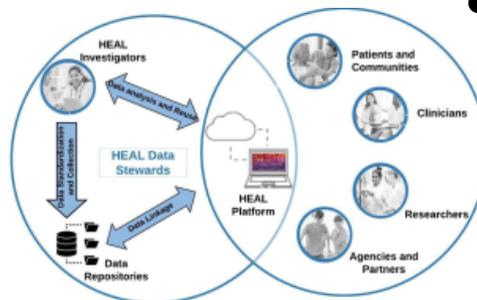

Data Commons (2016)

Research Project

Data Clouds (2010)

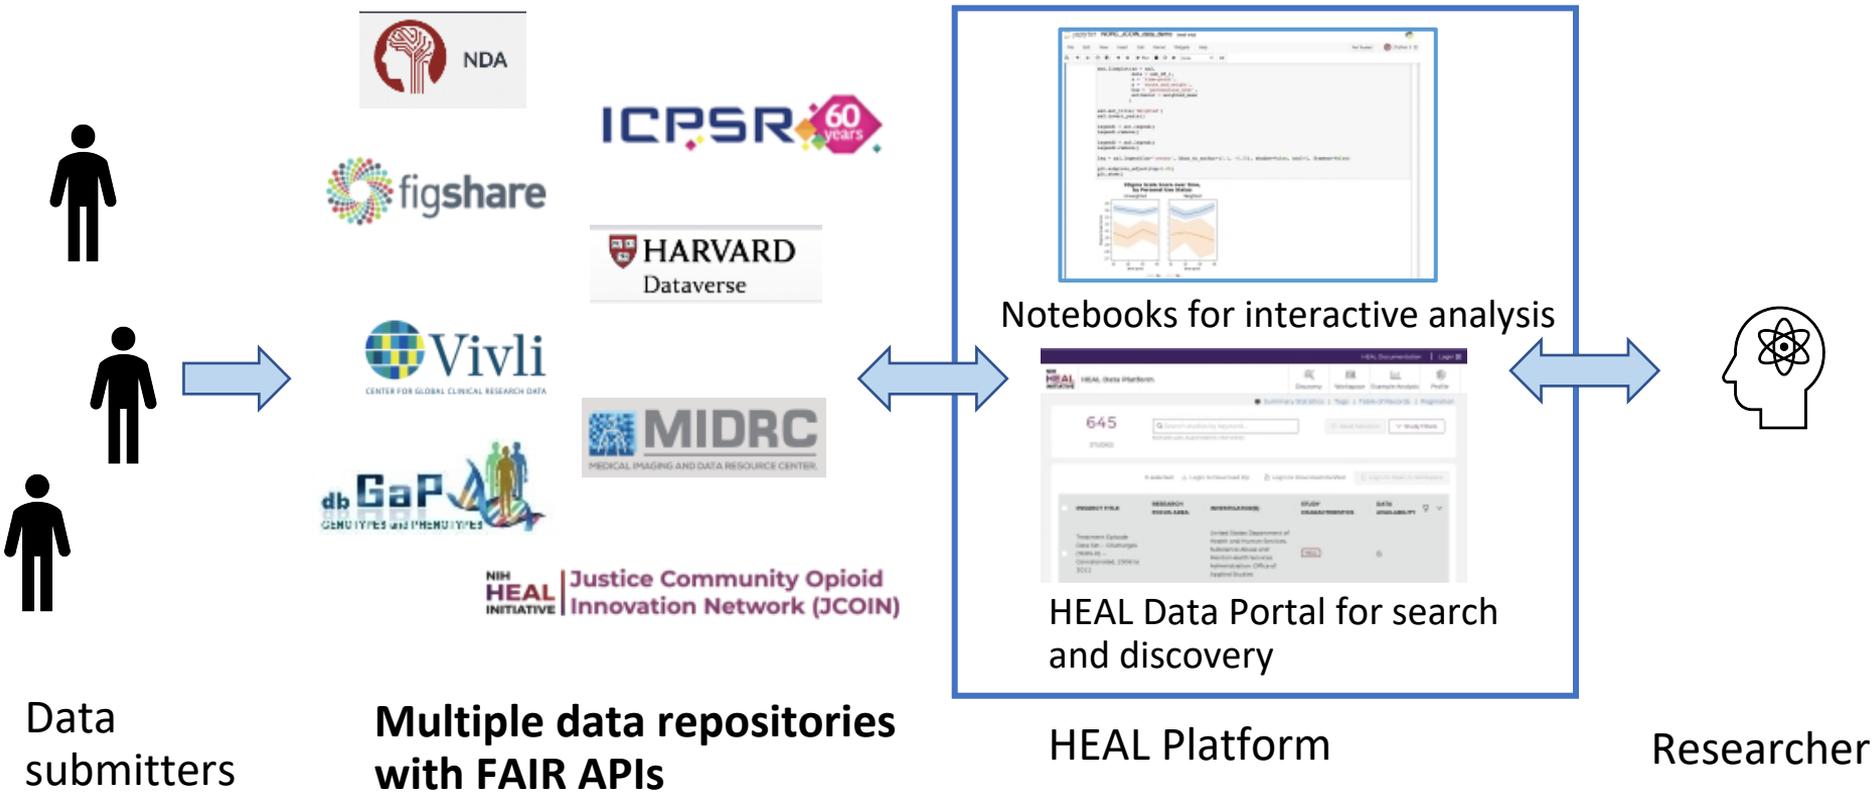

Multiple Research Communities

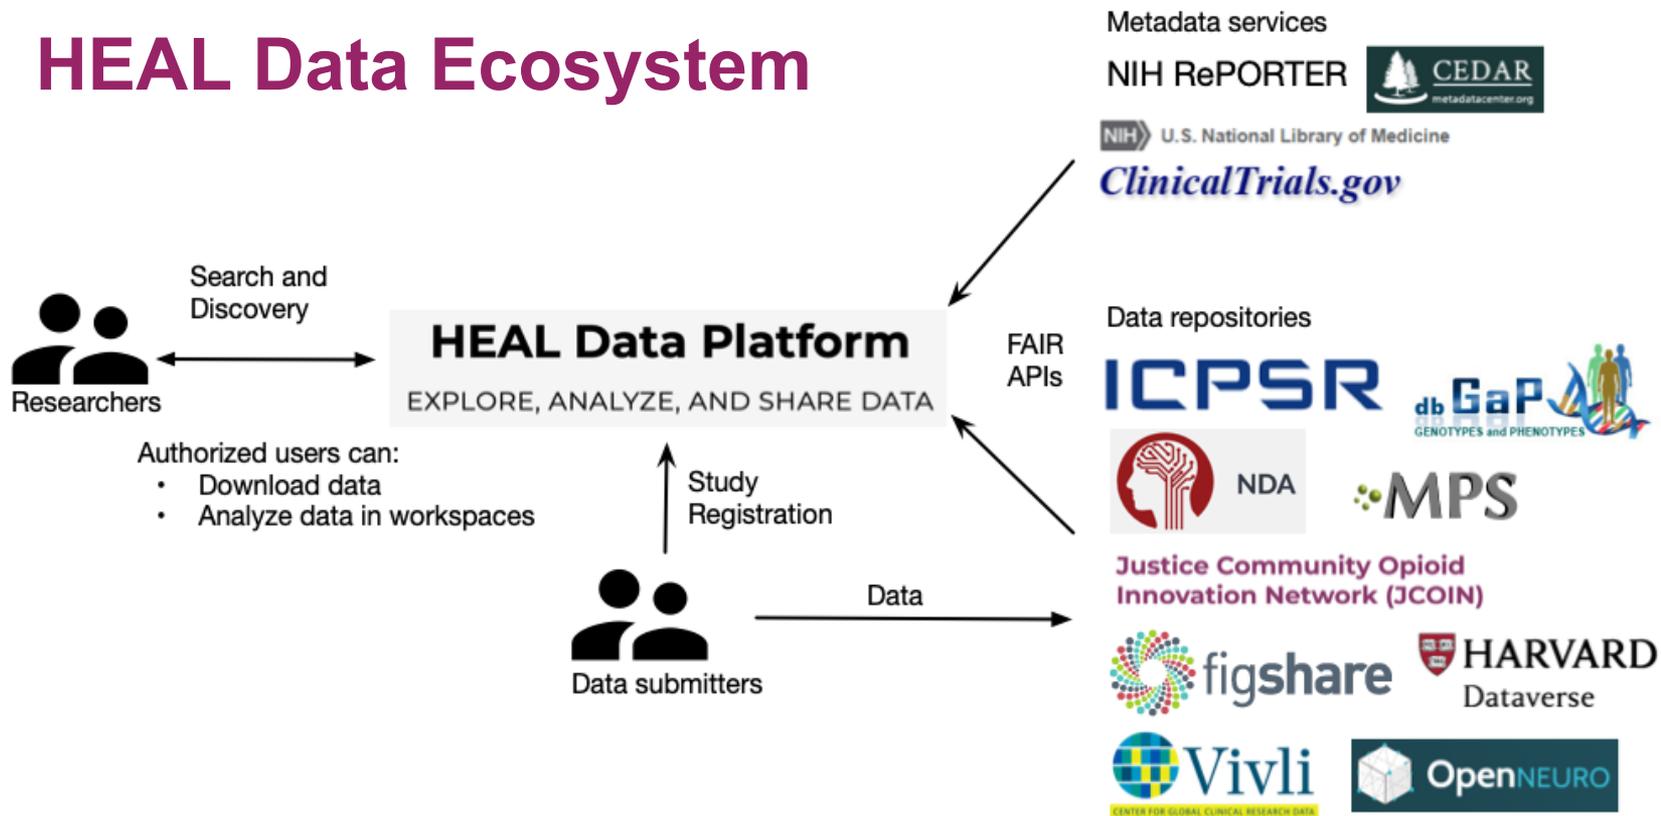

Data Ecosystems (2020)

- aka a “data mesh”
- Data ecosystems consisting of multiple data repositories, computational resources, knowledge bases, notebooks, & applications across multiple disciplines that can interoperate
- Hybrid governance model
- Services to support multiple data models

The HEAL Platform is a Data Ecosystem (aka a Data Mesh)

Methodology and Advanced Analytics Resource Center	Translation of Research to Practice for the Treatment of Opioid Addiction	Schneider, John; Pollack, Harold	Community Opioid Use Practice Quality Racial and Ethnic Populations Justice-involved Populations Observational Clinical Pain Treatment JCOIN	🔒

Abstract: Tracking changes in stigma associated with OUD is important, for as stigma intensifies over time it might make it more difficult to find positive treatment effects in JCOIN. Given the critical importance of public opinion towards policy making and approaches used in the justice system, this project will measure public support for OUD treatment in the general public, assess stigma associated...

PROJECT NUMBER	1U2CDA050098-01.a
RESEARCH FOCUS AREA	Translation of Research to Practice for the Treatment of Opioid Addiction
RESEARCH PROGRAM	Justice Community Opioid Innovation Network
RESEARCH QUESTION	Research questions: (1) What level of stigma does the general public attribute to individuals with an OUD? (2) What is the general public knowledge base and awareness of addiction and opioid treatment? (3) What is the public attitudes towards OUD, OUD treatment, and how does this vary by knowing individuals who have overdosed or social distance? (4) What is the public perceptions of criminality around OUD and appropriateness of justice interventions (incarceration/punitive and/or community/rehab)? We will also have demographic data on each study participant.
INSTITUTION(S)	University of Chicago/NORC
LOCATION	Chicago, IL
INVESTIGATOR(S)	Schneider, John; Pollack, Harold
ADMINISTERING IC(S)	NIDA
YEAR GRANT AWARDED	2019
STUDY TYPE	repeated cross-sectional survey
STUDY NAME	Amerispeak Brief Stigma Survey (JCOIN 026)
STUDY DESCRIPTION	Observational
NUMBER OF SUBJECTS	1000
NUMBER OF SITES	1
PROTOCOL NAME	JCOIN 026: Amerispeak Brief Stigma Survey

NIH HEAL INITIATIVE HEAL Data Platform

Discovery Workspace **Example Analysis** Profile

Static HEAL Jupyter Notebooks

The Jupyter notebooks contained in this notebook viewer pull data from various sources to generate and output useful tables, charts, graphs, and models. Each notebook is static, meaning the data being used by the notebooks is not updated in real time. These notebooks are also available in the Gen3 Workspace.

BACPAC Synthetic Data Analysis

In this Jupyter notebook, we used synthetic data of the BACPAC study as an example to demonstrate how to navigate datasets within the workspace in HEAL and conduct data analysis using Python libraries.

JCOIN Tracking Opioid Stigma

In this Jupyter notebook, we used the JCOIN-MAARC (Justice Community Opioid Innovation Network - Methodology and Advanced Analytics Resource Center) Survey Core Survey Project 1/4 to track stigma related to Opioid Use Disorder (OUD) and public attitudes towards persons with OUD as well as how treatment of/for persons with OUD may impact the effect of OUD interventions.

Stigma Scale Score over time

Opioid Prevalence And Overdoses

In this Jupyter notebook, we used the CDC WONDER, DEA ARCOS, and PDAPS datasets to demonstrate how multiple datasets may be utilized within the workspace in HEAL.

Workspaces

- Secure use of data leveraging cloud services
- Access to common software and specialized tools
- STRIDES
- Collaboration
- Replicability
