

# ***VSAC Users' Forum***

**Thursday, September 17, 2015**  
**2:00 – 3:00 PM**

## Purpose:

VSAC stakeholders need tooling that supports interactive and centralized collaboration among VSAC authors and external collaborators, as well as notification of changes.

## What does VSAC Collaboration do?

VSAC Collaboration provides a central site for teams to share threaded discussions about value sets, view recent value set expansions posted by members, organize value sets by usage, and by team's workflow needs, and receive activity and change notifications from VSAC.

## How do memberships and permissions work?

- All members of a value set's author group and steward group are automatically members of each value set's collaboration site.
- The steward can manage the members of the collaboration site and invite additional members if they wish.
- Anyone can request membership to a site, and a steward can approve it.
- The steward can restrict or open membership as they wish, and the steward can create a private or open group as they wish.

## What is the underlying program for VSAC Collaboration?

We have used the open source Alfresco software.

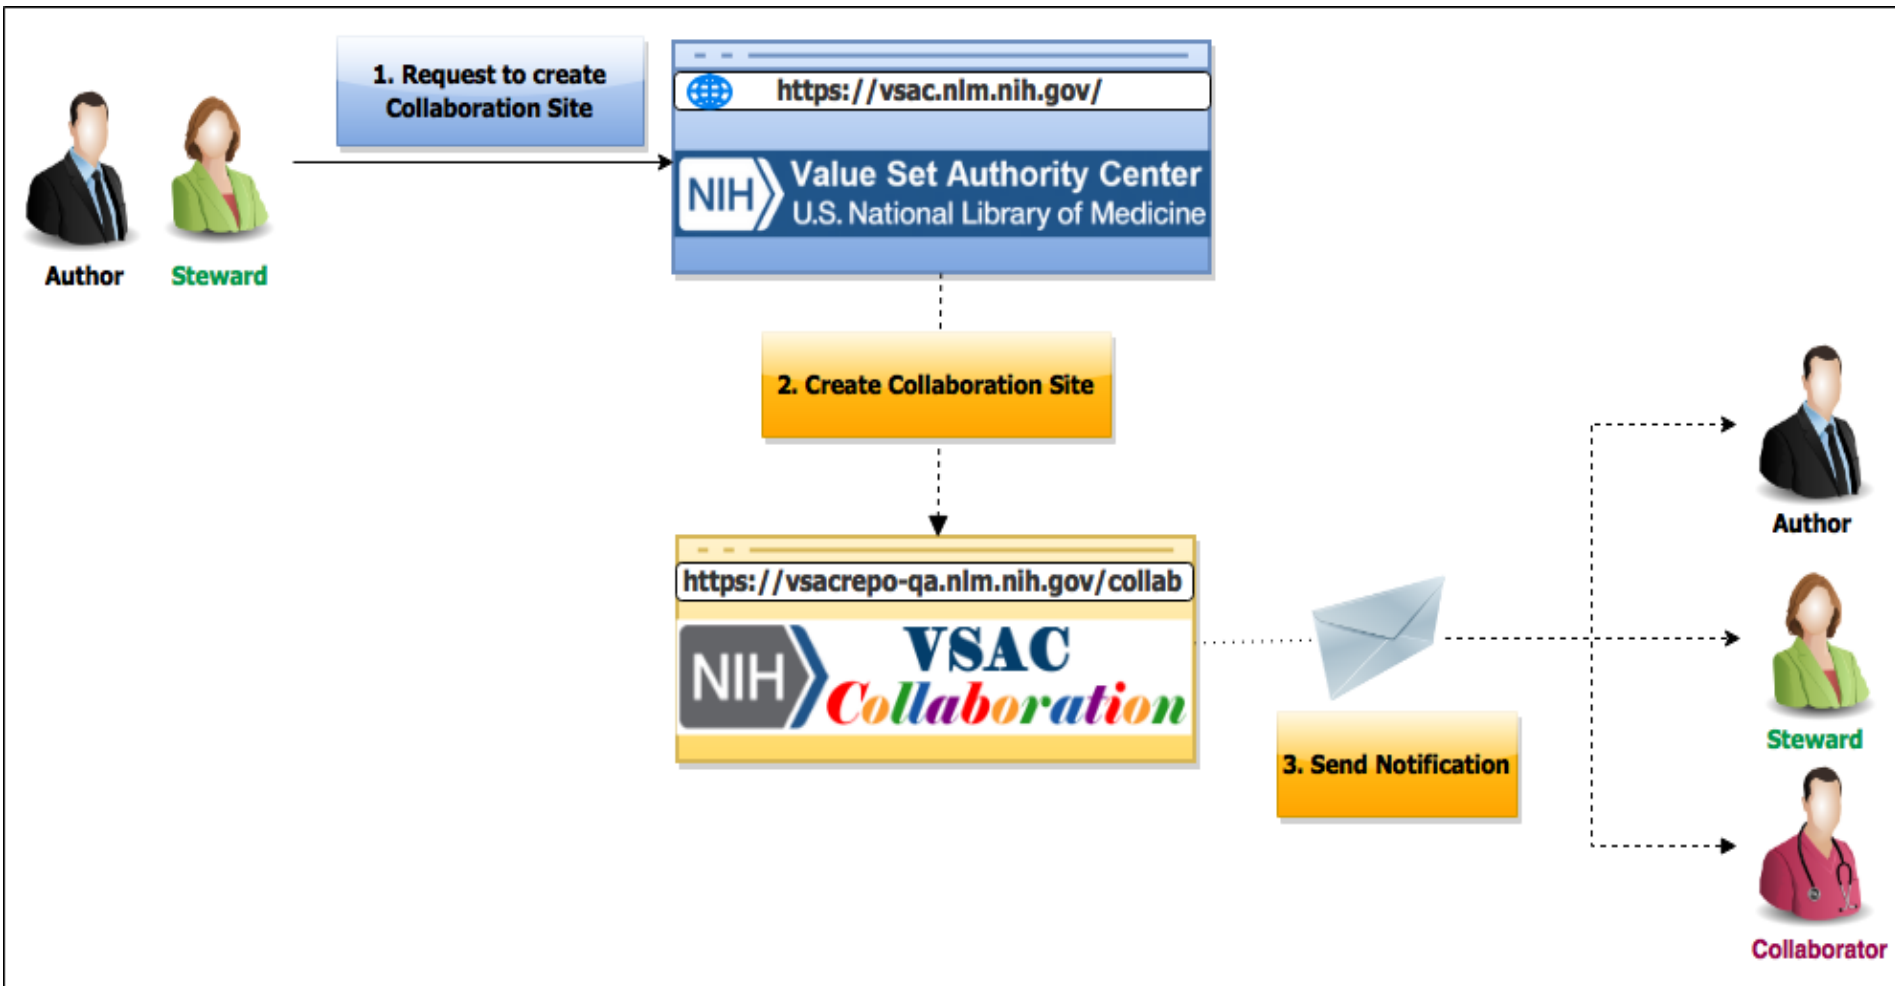

Alfresco is a customizable Enterprise Content Management (ECM) system that manages content within an enterprise and provides services and controls to manage this content.

<https://www.alfresco.com/>

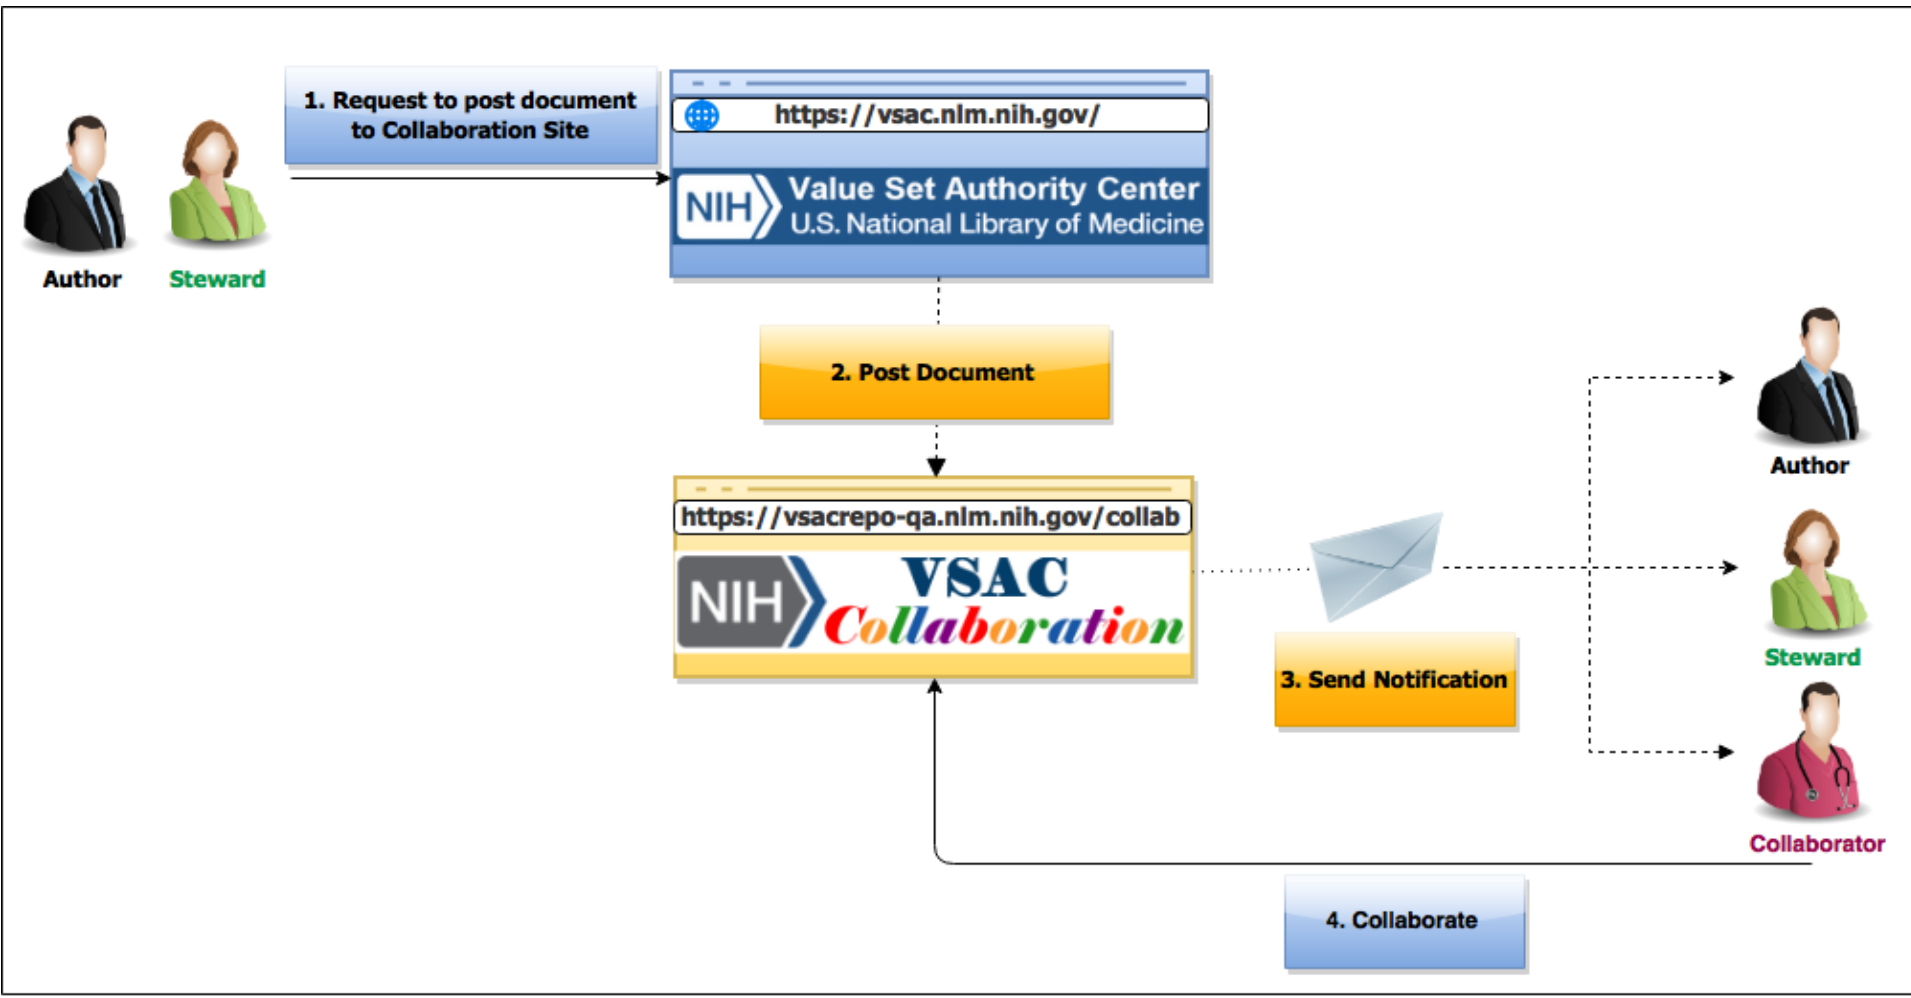

# From VSAC: Create a Collaboration Content Site for a Value Set

# From VSAC: Post a Value Set Document to a Collaboration Content Site

# Various Collaboration Workflow Descriptions

- Create a single value set site with default dashboard and members
- Upload and view value set content
- Invite internal and external collaborators to be collaboration content site members
- Add comments, reply to comments, add new topics
- Organize a vote and cast votes to attain consensus on content
- Create a collaboration content site based on collections of value sets
- Create a content site based on steward-defined keywords

# Create a Collaboration Content Site from within the VSAC Authoring Tool

The screenshot shows the VSAC Authoring Tool interface. At the top, there are tabs for 'Value Sets' and 'Type 1 Dia...'. Below this is a navigation bar with 'Collaboration', 'Harmnization', and 'Report' menus. The 'Collaboration' menu is expanded, showing options: 'Create Site...' (highlighted with a red arrow), 'Visit Site', and 'Post Document...'. To the right of these options, there are fields for 'Definition Version: Draft', 'Status: Draft', and a 'Note' text area. Below this, there are fields for 'Purpose: Show', 'Type: Extensional', 'Code System: SNOMEDCT', 'Steward: VSAC Collab Demo Steward', 'Author: VSAC Collab Demo Author', and 'Code System Version: 2015-03'. At the bottom, there is a 'Value Set Code List' table with columns for Code, Descriptor, TTY, Property, and Status. The table contains three rows of data for Type 1 diabetes mellitus findings. Navigation buttons for 'Edit', 'Submit', 'Clone', and 'Delete' are at the bottom.

Code	Descriptor	TTY	Property	Status
290002008	Brittle type I diabetes mellitus (finding)	FN		Active
444073006	Type I diabetes mellitus uncontrolled (finding)	FN		Active
444074000	Type I diabetes mellitus well controlled (finding)	FN		Active

# Login to VSAC Collaboration to Access the Content Site for a Specific Value Set

The screenshot shows the VSAC Collaboration login interface. At the top, there is a navigation bar with 'Home', 'My Files', 'Shared Files', 'Sites', and 'Tasks'. The user 'Maureen Madden' is logged in, and a search bar is available. The main content area features a 'Wiki - Main Page' on the left and a 'Discussion Threads' section on the right. The central focus is a login modal window with the VSAC Collaboration logo and the instruction: 'Please use your UMLS account to login to VSAC'. The login form includes fields for 'User Name' and 'Password', a 'Login' button, and links for 'Request One Now', 'Forgot Username', and 'Forgot Password'. A table with columns 'Modifier' and 'Modified Date' is partially visible in the background.

Value Set Purpose Created by Vsac Admin 2 minutes ago.

Each value set content site is automatically populated by all author and stewards for the value set. Every member of the value set's steward group can act as the manager of the value set content site. Site managers can: change Collab roles for each member within the Collab site; remove specific site members from the Collab site; invite external people into the Collab site; approve or reject invitation requests.

# Create Keywords: Keyword Management

The screenshot shows the Value Set Authority Center (VSAC) website in a Windows Internet Explorer browser window. The browser's address bar shows the URL <https://vsac-dev.nlm.nih.gov/#>. The website header features the NIH logo and the text "Value Set Authority Center U.S. National Library of Medicine". A navigation menu includes "Welcome", "Search Value Sets", "Authoring", "Collaboration", and "Download". A user profile dropdown menu is visible, showing "Welcome back, mmadden" and options for "Keyword Management", "Author Registration", "Contact Us", and "Sign out".

**Welcome to the NLM Value Set Authority Center (VSAC)**

For VSAC announcements, please subscribe to the [VSAC Updates listserv](#).

The Value Set Authority Center (VSAC) is provided by the National Library of Medicine (NLM), in collaboration with the Office of the National Coordinator for Health Information Technology and the Centers for Medicare & Medicaid Services.

The VSAC provides downloadable access to all official **versions** of vocabulary **value sets** contained in the 2014 Clinical Quality Measures (CQMs). Each value set consists of the numerical values (codes) and human-readable names (terms), drawn from standard vocabularies such as SNOMED CT®, RxNorm, LOINC and ICD-10-CM, which are used to define clinical concepts used in clinical quality measures (e.g., patients with diabetes, clinical visit).

The content of the VSAC will gradually expand to incorporate value sets for other use cases, as well as for new measures and updates to existing measures.

**Viewing or downloading value sets requires a free [Unified Medical Language System® Metathesaurus License](#), due to usage restrictions on some of the **codes** included in the value sets.**

The [Data Element Catalog](#) contains the complete list of 2014 CQMs and value set names.
