ERRATA

(Updated December 20, 2016)

The SF-8 mental component summary (MCS) and physical component summary (PCS) scores provided in the original National Beneficiary Survey (NBS) data files were calculated incorrectly. The original values excluded an intercept constant needed to scale the scores to general population norms. The intercept constant values are -10.11675 for the MCS, and -9.36839 for the PCS.

Because the intercept constants were not applied, the scores provided in the original data files were too high relative to what they should be on the population-based scale. Thus, if comparing NBS respondents to the general population, NBS respondents would appear healthier than they should. However, within the NBS respondent sample, the scores still appropriately represented greater or lesser mental and physical health according to the design of the SF-8.

The MCS and PCS variables included in the current data files have been corrected and are now valid for comparisons to other populations.

This page has been left blank for double-sided copying.

I. INTRODUCTION

As part of an evaluation of the Ticket to Work and Self-Sufficiency program (TTW), Mathematica Policy Research (MPR) conducted the second round of the National Beneficiary Survey (NBS) in 2005. The survey, sponsored by the Social Security Administration's (SSA) Office of Disability and Income Security Programs, collected data from a national sample of SSA disability beneficiaries (hereafter referred to as the Representative Beneficiary Sample) and a sample of TTW participants (hereafter referred to as the Ticket Participant Sample). The Ticket Participant Sample contains cross-sectional and longitudinal components, both of which are discussed in this report. MPR collected data using computer-assisted telephone interviewing (CATI) with computer-assisted personal interviewing follow-ups of CATI nonrespondents and those who preferred or needed an in-person interview to accommodate their disabilities.

A voluntary employment program for people with disabilities, TTW was authorized by the Ticket to Work and Work Incentives Improvement Act of 1999. The legislation was designed to create market-driven services to help disability beneficiaries become economically self-sufficient. Under the program, SSA provides beneficiaries with a "Ticket," or coupon, that they may use to obtain employment-support services, including vocational rehabilitation, from an approved provider of their choice (called Employment Networks or ENs).¹

The TTW program was implemented in three phases. In Phase 1, which began in February 2002, the program was rolled out in 13 states across the country. In Phase 2, which began in November 2002, the program was extended to an additional 20 states plus the District of

¹ For more information on the Ticket to Work Program, see Thornton et al. 2004.

Columbia. Phase 3, which began in November 2003, implemented TTW in the remaining 17 states and U.S. territories (Thornton, et al. 2004).

A. OVERVIEW OF THE NATIONAL BENEFICIARY SURVEY

1. Survey Objectives

The NBS is one of several components of an evaluation to assess the impact of TTW relative to the current system—the SSA Vocational Rehabilitation Reimbursement Program, which has been in place since 1981. The evaluation includes a process analysis, as well as an impact and a participation analysis. Along with the NBS, the data sources include SSA administrative records and interviews with program stakeholders. The NBS collects data needed for the TTW evaluation that are not available from SSA administrative data or other sources.

The NBS has five key objectives:

1. To provide critical data on the work-related activities of SSI and SSDI beneficiaries, particularly as these activities relate to TTW implementation
2. To collect data on the characteristics and program experiences of beneficiaries who use their Ticket
3. To gather information about beneficiaries who do not use their Ticket, and the reasons for this choice
4. To collect data that will allow us to evaluate the employment outcomes of Ticket users and other SSI and SSDI beneficiaries
5. To collect data on service use, barriers to work, and beneficiary perceptions about TTW and other SSA programs designed to help SSA beneficiaries with disabilities find and keep jobs

Round 2 NBS data will be combined with SSA administrative data to provide critical information on access to jobs and on employment outcomes for beneficiaries, including those who participate in the TTW program and those who do not. Though some sections of the NBS target beneficiary activity directly related to TTW, most of the survey captures more general

information on SSA beneficiaries, including their disabilities, interest in work, use of services, and employment. As a result, SSA and external researchers who are interested in disability and employment issues can use the survey data for other policymaking and program-planning efforts.

2. Data Collection Overview

Round 2 CATI data collection for both samples began in February 2005. Beginning in May 2005, MPR conducted in-person CAPI interviews with beneficiaries who did not respond to the CATI interview, as well as those who could not be located (and whose names and other information were sent to field interviewers for additional locating), or who requested an in-person interview to facilitate their participation in the survey. The survey instrument was identical in each mode. When possible, the interview was attempted with the sample person. If the sample person was unable to complete either a telephone or in-person interview, a proxy respondent was sought. Proxy interviews were attempted only when the sample member was unable to complete the survey himself or herself due to his/her disability. To promote response among Hispanic populations, the questionnaire was available in Spanish. For languages other than English and Spanish, interpreters conducted the interviews. A number of additional accommodations were made available for those with hearing and/or speech impairments including teletypewriter (TTY), Telecommunications Relay Service (TRS), amplifiers, and instant messaging technology.

As shown in Table I.1, the NBS round 2 sample comprised 6,712 cases selected for the Representative Beneficiary Sample and 4,289 cases selected for the Phase 1 and Phase 2 Ticket Participant Cross-Sectional Samples (for a total of 11,001 cases). The Phase 1 Ticket Participant Longitudinal Sample comprised 1,466 cases selected at round 1. Most of these cases (82 percent) were still signed up with TTW at the time of the round 2 sample selection and were therefore

considered part of the cross-sectional sample. The remainder were not TTW participants at round 2 and were therefore not eligible for the Phase 1 Ticket Participant Cross-Sectional Sample.

TABLE I.1

SAMPLE SIZES, TARGET COMPLETES, AND ACTUAL COMPLETES FOR CROSS-SECTIONAL SAMPLE

Sampling Strata	Sample Size	Target Completes	Actual Completes
Representative Beneficiary Sample	6,712	4,800	4,864
Ticket Participant Sample	4,289	3,000	3,091
Phase 1 Cohort	2,939	2,000	2098
Phase 2 Cohort	1,350	1,000	993
Total Sample Size	11,001	7,800	7,955

Source: NBS, round 2.

The round 2 CATI and CAPI data collection was completed in September 2005. In the cross-sectional samples, 7,955 cases were completed (including 29 partially completed interviews)—4,864 from the Representative Beneficiary Sample and 3,091 from the Phase 1 and Phase 2 Ticket Participant cohorts.² An additional 151 cases were not eligible for the Ticket Participant Cross-Sectional Sample, but are included in the data file as completed interviews from the Longitudinal Ticket Participant Sample (for a total of 3,242 Ticket Participant complete interviews)³. Thus the total number of completes is 8,106: 4,864 from the Beneficiary Sample and 3,242 TTW Participant completes (3,091+151). An additional 375 beneficiaries and 63 TTW

²Because the clustered and unclustered samples of the Ticket Participant Sample were independent, it was not uncommon for individuals to be chosen for both samples. It was also possible for a sample member to be chosen for both the Representative Beneficiary Sample and the Ticket Participant Sample. Interviews for these duplicate cases were conducted only once but recorded twice (once for each sample). The counts given above include these duplicates as separate cases.

³ Partial interviews were considered as completed if responses were provided through section H of the interview (or if the respondent was not eligible to receive section H, through section G of the interview).

participants were determined to be ineligible for the survey.⁴ Across both samples, 6,371 cases were completed by telephone, and 1,735 were completed by CAPI. Proxy interviews were completed for 1,793 sample members (22 percent). There were 207 cases in which the sample member was unable to participate and a proxy could not be identified. The weighted response rate for the Representative Beneficiary Sample was 78.7 percent. The weighted response rate for the Ticket Participant Cross-Sectional Sample was 80.4 percent. More information about the sample selection and sampling weights can be found in Chapter VI.

B. NBS RESTRICTED USE AND PUBLIC USE FILES

This guide describes the content and format of the NBS Restricted and Public Use data files and codebooks. To protect the anonymity of the respondents while providing accurate and detailed data, the NBS data are presented in two formats: a Restricted Use file available only to users approved by SSA and for use on specific research projects, and a Public Use File, planned to be released by SSA, for the general public to use in various statistical analyses. These two files present the same survey results, but offer differing degrees of accessibility to confidential information. For both data files, any information that could directly or indirectly identify a respondent has been removed; this information includes respondents' names, Social Security numbers, and addresses. Because of its more widespread availability, the Public Use File has undergone extensive masking and has fewer available variables than the Restricted Use File. Even with the variables masked, however, the NBS Public Use File offers a wide variety of pertinent variables and topics for the general public to use. The masking procedures employed to

⁴Ineligible sample members include those who were deceased, incarcerated; or no longer living in the continental United States; or those whose benefit status was pending. For the Ticket Participant Sample, ineligibles also included sample members who left the program after sampling was completed (although those who were in the round 1 sample and subsequently left the program were eligible for the Phase 1 longitudinal sample).

create the Public Use File are discussed in more detail in Chapter V. A listing of the variables available on the NBS Restricted Use Data File and Public Use Data File is included as Appendix A.

The Public Use File will be available to researchers through the Health and Medical Care Archive at the Inter-University Consortium for Political and Social Research (ICPSR). The file can be downloaded directly from the ICPS Web site (www.icpsr.umich.edu). Researchers must contact SSA to obtain permission to use the Restricted Use File.

C. ROUND 2 DATA DOCUMENTATION REPORTS

The following reports make up the complete documentation describing the NBS, the round 2 data collection, and the data files:

- ***Editing, Coding, Imputation, and Weighting Report*** (Grau, et al. 2008). This report summarizes the editing, coding, imputation, and weighting procedures as well as the development of standard errors for the round 2 NBS. It includes an overview of the variable naming, coding, and construction conventions used in the data files and accompanying codebooks; describes how the sampling weights were computed to the final post-stratified analysis weights for both the Representative Beneficiary Sample and the Ticket Participant Sample (and describes the procedures for combining these samples); describes the procedures used to impute missing responses; and discusses procedures that should be used to estimate sampling variances for the NBS.
- ***Cleaning and Identification of Data Problems Report*** (Wright and Barrett 2008). This report describes the data processing procedures performed for round 2 of the NBS. It outlines the data coding and cleaning procedures and describes the data problems identified, their origins, and the corrections implemented to create the final data file. The report describes the data issues by sections of the interview and concludes with a summary of types of problems encountered and general recommendations.
- ***User's Guide for Restricted and Public Use Data Files*** (current report). This report is designed to provide users with information about the restricted and public use data files including construction of the files; weight specification and variance estimation; masking procedures employed in the creation of the Public Use File; and a detailed overview of the questionnaire design, sampling, and NBS data collection. The report also contains some information covered in the two reports mentioned above, including procedures for data editing, coding of open-ended responses, and variable

construction; and a description of the imputation and weighting procedures and development of standard errors for the survey.

In addition, the following supplemental materials are available from MPR or SSA upon request:

- ***NBS Questionnaire***. This document contains all items on the round 2 survey and includes documentation of skip patterns, question universe specifications, text fills, interviewer directives, and consistency and range checks.
- ***NBS Restricted Access and Public Use File Codebooks***. The codebooks provide extensive documentation for each variable on the file including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes. Frequency distributions and means are also included, as appropriate.

In the discussion that follows, we provide detailed information about the NBS to assist users of the round 2 public and restricted access data files. Chapter I offers an overview of the NBS and study objectives. In Chapter II we describe the sample design of the NBS. Chapter III provides an overview of the questionnaire design. Chapter IV explains the NBS data collection, including the locating and calling protocols for this survey. Chapter V is devoted to variable construction and editing, and provides information on the coding of verbatim and open-ended responses found in the NBS. Masking procedures employed in the creation of the Public Use File are also discussed. Chapter VI explains the weighting, imputation, and variance estimates used in this survey. Finally, Chapter VII provides information about using the NBS data files, including weight specification and variance estimation.

II. SAMPLE DESIGN

A. OVERVIEW OF THE DESIGN

SSA implemented the TTW program in three phases spanning three years, with each phase corresponding to about one-third of the states. The initial NBS survey design called for four national cross-sectional surveys (called rounds) of Ticket-eligible SSA disability beneficiaries—one each in 2003, 2004, 2005, and 2006—and cross-sectional surveys of Ticket participants in each of three groups of states (Phase 1, Phase 2, and Phase 3 states)—defined by the year in which the program was rolled out (Bethel and Stapleton 2002).⁵ This design was subsequently revised to accommodate Phase 1 data collection starting in 2004 rather than 2003. In addition, the final round was postponed to address the experiences of TTW participants under the new TTW regulations, implemented in July 2008. The fourth round will include a cross-sectional Representative Beneficiary survey as well as a survey of new Ticket Participants and is planned for 2009. Details of the sample design for round 4 are not yet determined; in a change from the original design, Ticket participants from previous rounds will not be re-interviewed.

One group of sample members in each of the first two cross-sectional surveys of Ticket participants was followed longitudinally across rounds: Phase 1 sample members who were

⁵ The Ticket to Work program, implemented in 2002, was phased in nationwide over three years. In 2002, the first year of the program, SSA distributed Tickets in the following 13 states, known as the “Phase 1” states: Arizona, Colorado, Delaware, Florida, Illinois, Iowa, Massachusetts, New York, Oklahoma, Oregon, South Carolina, Vermont, and Wisconsin. The Phase 2 roll-out ran from November 2002 through September 2003, during which time SSA distributed Tickets in the following 20 “Phase 2” states and the District of Columbia: Alaska, Arkansas, Connecticut, Georgia, Indiana, Kansas, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Montana, Nevada, New Hampshire, New Jersey, New Mexico, North Dakota, South Dakota, Tennessee, Virginia, and the District of Columbia. The Phase 3 roll-out ran from November 2003 through September 2004, during which time SSA distributed Tickets in 17 “Phase 3” states: Alabama, California, Hawaii, Idaho, Maine, Maryland, Minnesota, Nebraska, North Carolina, Ohio, Pennsylvania, Rhode Island, Texas, Utah, Washington, West Virginia, and Wyoming, as well as in American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, and the Virgin Islands.

active in the TTW program in round 1, and Phase 2 sample members active in round 2. The original sample design called for re-interviewing only those longitudinal cases that had completed the previous round. However, based on MPR's recommendation, re-interviews were attempted with all longitudinal cases. Table II.1 gives the original planned sample sizes for all rounds of data collection. The initial sampling and survey design documents are available from SSA upon request.

TABLE II.1
NATIONAL BENEFICIARY AND TTW PARTICIPANT SAMPLE SIZES

Sample ^a	Year 1	Year 2	Year 3	Year 4	All Years ^c	
National Beneficiary Samples	7,200	4,800	2,400	1,500	15,900	
Longitudinal TTW Participant Samples	Phase 1 Cohorts (1) ^b	1,000	922	850	784	3,556
		(2)	1,000			1,000
	Phase 2 Cohorts (1)	1,000	922	850		2,772
		(2)		1,000		1,000
	Phase 3 Cohorts (1)			1,000	922	1,922
		(2)			1,000	1,000
	Total	1,000	2,922	3,772	3,556	11,250
Total Sample Size	8,200	7,722	6,172	5,056	27,150	

Source: NBS Sample Design Report (Bethel and Stapleton 2002)

^a Sample sizes refer to number of completed interviews

^b(1)=TTW participant longitudinal sample and (2)=TTW participant cross-sectional supplement

^c The All Years column is a tabulation of the number of interviews, not the number of sample members. Longitudinal cases may be included up to three times in these counts, depending upon the number of completed interviews for the sample member in question.

In round 1 (2004), two surveys were fielded: the first national survey of all beneficiaries (the Representative Beneficiary Sample) and the first cross-sectional survey of Ticket participants in the Phase 1 states (the Ticket Participant Sample). Three surveys were fielded in round 2 (2005):

1. The second national survey of all beneficiaries (The Representative Beneficiary Sample)
2. The second cross-sectional survey of Ticket participants who resided in a Phase 1 state at the time of Ticket assignment (The Phase 1 Cross-Sectional Ticket Participant Sample)
3. The first cross-sectional survey of Ticket participants who resided in a Phase 2 state at the time of Ticket assignment (The Phase 2 Cross-Sectional Ticket Participant Sample)

Additionally, we attempted to re-interview Phase 1 Ticket Participants who were selected into the sample at round 1, whether or not they had been interviewed in round 1 (the Phase 1 Longitudinal Sample). Phase 2 cases who were selected into the sample at round 2 are part of the Phase 2 Longitudinal Sample. Most, but not all, of the Phase 1 Longitudinal Sample cases were also part of the Phase 1 Cross-Sectional Ticket Participant Sample.⁶ All of the Phase 2 sample cases are part of the Phase 2 Longitudinal Sample, regardless of their round 3 final disposition.

The NBS used a multi-stage sampling design (which was used for all survey rounds) with a supplemental single-stage sample for some Ticket participant populations. For the multi-stage design, data from SSA on the counts of eligible beneficiaries in each county were used to form the primary sampling units (PSUs) consisting of one or more counties. A stratified national sample of 80 PSUs was selected; Los Angeles County and Cook County (Chicago) were selected with certainty because of the number of SSA beneficiaries in these counties. Because of the size of these two counties (in both beneficiary population and geographic area), Secondary Sampling Units (SSUs) were formed using zip codes of beneficiaries. Four SSUs were selected from Los Angeles County and two were selected from Cook County (Chicago). PSUs were selected with probability proportional to size of the beneficiary population in them. One PSU was selected

⁶ All Phase TTW participants in the round 1 sample were in the longitudinal sample. Of this sample, the cross-sectional sample included only those sample members who were still participating in the TTW program at round 2.

twice because of the large number of beneficiaries in the included county, therefore the final number of PSUs selected was 79. The sample of all SSA beneficiaries (the Representative Beneficiary Sample) was selected from among beneficiaries residing in these PSUs/SSUs using age-defined sampling strata. The final sample size for the Representative Beneficiary Sample in round 2 was 6,712.

These PSUs were also used to generate the Phase 1 and Phase 2 Ticket Participant Samples for each of the three Ticket Program EN payment types (outcome-only, milestone-outcome, and traditional vocational rehabilitation). Each phase of the Ticket program included only one-third of all states; therefore, the sample for each phase was based on only one-third of the PSUs. For participants in both Phase 1 and Phase 2 states using either the milestone-outcome or the outcome-only payment system, the number of Ticket participants in the clusters was insufficient to support the analytic objectives of the survey, so the clustered samples were supplemented by an independent unclustered sample of participants. The clustered Ticket Participant Samples were selected using the same PSUs, but due to the small number of Ticket participants, the Secondary Sampling Units were not used and the sample was drawn from all participants in the PSUs.⁷ For participants using the milestone-outcome and outcome-only payment types, the unclustered sample was a stratified random sample using two strata: participants in the PSUs and participants outside of the PSUs. This stratification was needed to control the sample release.

For round 2, the final sample size for the Ticket Participant Cross-Sectional Sample was 4,289. This consisted of the Phase 1 Ticket Participant Cross-Sectional Sample, with 2,939

⁷ Participants of the Ticket program are also SSA beneficiaries and these samples of participants are designed to support the more detailed analysis required for the evaluation of the program. We anticipated that some Ticket participants would be selected in the beneficiary survey (and a small number of Ticket participants were selected in both samples).

sample members, and the Phase 2 Ticket Participant Cross-Sectional Sample with a sample size of 1,350 (see Table II.2 for a detailed description of sample size by stratum)

TABLE II.2

ROUND 2 CROSS-SECTIONAL SAMPLE SIZES AND TARGET COMPLETES PER SAMPLING STRATUM

Sampling Strata	Sample Size	Target Completes	Actual Completes
Beneficiary Sample	6,712	4,800	4,864
18 to 29 Years Old	1,891	1,333	1,374
30 to 39 Years Old	1,837	1,333	1,315
40 to 49 Years Old	1,858	1,333	1,352
50 to 64 Years Old	1,126	800	823
Ticket Participant Cross-Sectional Sample	4,289	3,000	3,091
Phase 1 Cohort ^a	2,939	2,000	2,098
Traditional Payment Type	882	666	712
Milestone-Outcome Payment Type (Unclustered)	646	666	410
Milestone-Outcome Payment Type (Clustered)	438		330
Outcome-Only Payment Type (Unclustered)	805	666	528
Outcome-Only Payment Type (Clustered)	168		118
Phase 2 Cohort	1,350	1,000	993
Traditional Payment Type	437	333	344
Milestone-Outcome Payment Type	436	333	331
Outcome-Only Payment Type (Unclustered)	391	333	258
Outcome-Only Payment Type (Clustered)	86		60
Total	11,001	7,800	7,955

Source: NBS round 2.

^a The Phase 1 Cross-Sectional Sample included 1,200 Ticket participants sampled at round 1 who were still in SSA's Ticket Participant File at the time of round 2 and 1,739 Ticket participants in SSA's Ticket Participant File who were newly sampled at round 2. Some of these 1,739 Ticket Participants were in SSA's file at both round 1 and round 2; others were in only the round 2 file.

The round 2 Phase 1 Ticket Participant Cross-Sectional Sample included 1,200 longitudinal cases, along with 1,739 Supplemental Sample cases that were interviewed for the first time in round 2. Of the 1,466 cases in the Phase I Longitudinal Sample, 1,200 (82 percent) were found in

SSA's file of active Ticket participants at round 2. The remaining 266 were either deceased or were not TTW participants at round 2 and were therefore not eligible for the Phase 1 Ticket Participant Cross-Sectional Sample (see Table II.3 for longitudinal sample sizes and completes per stratum). The full sample of TTW participants included 4,555 sample members (4,289 participants in the cross-sectional samples plus the 266 sample members who were participants in round 1 and not at round 2, as noted above). See Tables II.2 and II.3 for sample size by stratum.

ROUND 2 PHASE 1 LONGITUDINAL SAMPLE SIZES AND TARGET COMPLETES
PER SAMPLING STRATA

Sampling Strata	Sample Size	Target Completes	Actual Completes
Traditional Payment Type	441	307	337
Milestone-Outcome Payment Type	455	307	321
Outcome-Only	570	307	361
Outcome-Only Payment Type (Unclustered)	447		281
Outcome-Only Payment Type (Clustered)	123		80
Total	1,466	921	1,019

Source: NBS round 2.

B. TARGET POPULATION

The target population for both the Representative Beneficiary Sample and the Ticket Participant Sample consisted of SSI and SSDI beneficiaries between the ages of 18 and 64. For the Representative Beneficiary Sample, the target population included beneficiaries in all 50 states and the District of Columbia who were in active pay status as of June 2004.⁸ There were

⁸ Beneficiaries in the Trust Territories and Puerto Rico were excluded from the survey target population.

two subpopulations of these beneficiaries who are not eligible for Ticket participation but were included in the survey samples to give complete coverage of the national beneficiary population:

- Beneficiaries who were designated as Medical Improvement Expected (MIE) at the time they received their allowances and who had not yet completed a first Continuing Disability Review (CDR)
- Young SSI recipients who were receiving benefits because of their eligibility as a child, and were in the process of completing a re-determination under the adult eligibility criteria.

The beneficiary target population included approximately 10 million persons; approximately 2 million beneficiaries were in the sampled PSUs.

For the Ticket Participant Cross-Sectional Sample, the target population included beneficiaries who had used the Ticket at least once as of January 1, 2004, or between January 1, 2004, and November 18, 2004. For the Ticket participants, the study population was constrained by the TTW rollout schedule. The target population for the round 2 survey included beneficiaries who were participants in SSA's Ticket to Work program in the Phase 1 or Phase 2 rollout states. Participants were assigned to a phase for this study on the basis of their address at the time of program rollout regardless of their current address. Thus, a Phase 1 participant (early state rollout) might reside in any state at the time of the survey.

For the Phase 1 Ticket participants, the samples were designed for the analysis of two populations:

- The longitudinal population: Persons who were participants at the time of the first data collection.
- The cross-sectional population: Persons who were currently participants (including participants from both round 1 and round 2).

At the time of round 2 sampling, the target population for the Phase 1 Ticket Participant Cross-Sectional Sample included 34,312 Ticket participants and the target population for the Phase 2 Ticket Participant Cross-Sectional Sample included 21,196 Ticket participants. The target population for the Phase 1 Longitudinal Sample included 21,477 Ticket participants.

C. PRIMARY SAMPLING UNIT FORMATION AND SELECTION

PSUs were needed for both the Representative Beneficiary Survey and the Ticket Participant Survey and were constructed using county-level beneficiary counts. Based on the design report for the TTW Evaluation (Bethel and Stapleton 2002), the design for the Representative Beneficiary Survey called for 80 PSUs to be formed from counties or groups of counties. The design report also recommended that in the geographically largest PSUs, Secondary Sampling Units (SSUs) would be formed based on zip codes, and a sample of these would be selected. The clustered Ticket Participant Sample was selected in the same manner as the Representative Beneficiary Sample using the same PSUs, but due to the small number of Ticket participants, the Secondary Sampling Units were not used and the sample was drawn from all participants in the PSUs. To construct the PSUs, county-level counts of beneficiaries in four age strata (18-29, 30-39, 40-49, and 50-64) and a composite size measure were used (Folsom et al. 1987). The composite size measure incorporates the count of beneficiaries and the desired sampling rate of beneficiaries in each age stratum and permits equal probability of selection of beneficiaries within each age stratum across PSUs, and approximately equal workload in each PSU. To form the PSUs, counties were ordered within each state by geography using a score based on latitude and longitude. An eligible PSU needed a composite size measure above a specific level to ensure that adequate counts of beneficiaries existed in each of four sampling strata. The PSUs were also evaluated on the basis of geographic size (square miles), topography (lakes, rivers, and mountain

ranges) and transportation access among counties in a PSU (roadways in mountainous areas and bridges around the Great Lakes).

In total, 1,330 PSUs were formed with 48 percent (664 PSUs) having a single county; 84 percent (1,118 PSUs) had three or fewer counties. Of the 1,330 PSUs, just 30 (2.2 percent) included 10 or more counties; mostly rural areas in Western states.

For sample selection of PSUs, the PSUs were stratified explicitly by the Ticket program's three phases (each accounting for approximately one-third of the states). Based on the selection frequencies for the PSUs computed using the composite size measure, two PSUs were classified as certainty PSU selections (Los Angeles County and Cook County (Chicago)). Because of the size of the Los Angeles County selection frequency, this PSU was allocated twice the sample size allocated to the others. To complete the sample of 80 PSUs, we selected 77 other noncertainty PSUs with probability proportional to the composite size measure within each Ticket phase stratum. The selection of the PSUs was controlled implicitly by SSA region, state within SSA region, and a beneficiary weighted score (from 0 to 9) based on the 2003 Urban Influence Code (Area Resource File 2003). In the Phase 1 states, 23 PSUs were selected and in the Phase 2 states, 25 PSUs were selected. In the Phase 3 states, 31 PSUs were selected. (As noted previously, the Los Angeles County PSU accounted for two PSU selections).

In the Los Angeles and Chicago certainty PSUs, Secondary Sampling Units were formed using counts of beneficiaries in each stratum for five-digit zip codes and the composite size measure. Once again, SSUs consisted of one or more zip code areas such that the aggregate composite size measure exceeded the criterion value. In the Los Angeles PSU, 62 SSUs were formed and four were selected with probability proportional to the composite size measure. In the Chicago PSU, 44 SSUs were formed and two were selected with probability proportional to the composite size measure.

D. STRATA DEFINITIONS AND SAMPLE SIZES

The sample is designed to be statistically and operationally efficient and to provide adequate sample sizes for the planned analyses. In order to ensure a sufficient number of persons seeking work, the Representative Beneficiary Sample was classified into sampling strata based on age, with persons in the younger age categories selected at higher rates than those in the oldest age category. The Representative Beneficiary Sample was divided into the following age groups: 18-29, 30-39, 40-49, and 50-64, which were used as the sampling strata. The target number of completed interviews for round 2 was 1,333 beneficiaries in each of the three younger age groups (18-29, 30-39, and 40-49). For the 50-64 age cohort, the target number of completed interviews was 800 beneficiaries.

The sampling strata for the Ticket Participant Samples were defined by the payment system. For Ticket participants, services received from ENs can be provided under three program payment systems: (1) outcome-only, (2) milestone-outcome, or (3) the traditional vocational rehabilitation reimbursement system. (See the “Evaluation of the Ticket to Work Program Initial Report,” Thornton, et al. (2004), for more information about the EN program payment systems.) Because the use of the outcome-only and milestone-outcome payment systems was low among Ticket participants, both a clustered and unclustered sample of participants was selected for each of these payment types. The sample of participants using the traditional payment type was limited to a clustered sample. The target number of completed interviews for participants at round 2 was 3,000 overall, with a target of approximately 2,000 for the Phase 1 cohort (666 in each payment type) and 1,000 for the Phase 2 cohort (333 in each payment type).

In order to statistically combine the clustered and unclustered samples, we needed to establish comparability between the portions of the samples related to the data collection effort because, while both samples received central office locating and telephone interviewing, only the

clustered sample received field locating and in-person interviewing. Sample members in both the clustered and unclustered samples underwent the same level of central office locating activities (including batch processing through search databases and individualized locating efforts) to identify a telephone number so that a telephone interview could be attempted. For the unclustered sample, participants who could not be located or who required an in-person interview were considered nonrespondents. Operationally, these cases were “closed out” and classified as ineligible for purposes of sampling weight computation.⁹ For the clustered sample, beneficiaries who could not be located or who required an in-person interview were eligible for a field follow-up and were assigned to field locators/interviewers. The sample members in both the clustered and unclustered samples were comparable up to the point of assignment of sample members for field work. The samples from the clustered and unclustered sample before assignment for field work could be statistically combined because the two samples represented the same subpopulation (Ticket participants who could be located by central office locating efforts and interviewed by telephone). The sample members in the clustered sample who were assigned for field work represented a subsample of sample members representing the subpopulation who required field work for locating and interviewing.

For fielding purposes in both the Representative Beneficiary Sample and the Ticket Participant Samples, we selected many more cases than we needed (called the augmented sample) to ensure that an adequate pool of sample would be available if we found that the response and eligibility rates during data collection differed from our initial assumptions. Within each stratum, an equal probability sample of beneficiaries or participants was selected using a

⁹ They were treated differently, however, than other ineligible cases, which were operationally treated as respondents for the purposes of calculating sample weights and response rates.

sequential selection algorithm with the sampling frame sorted by disability diagnosis, race/ethnicity, and zip code. These sorting factors ensured an approximate proportional allocation of the sample across levels of these factors and, therefore, enhance the face validity of the sample across these factors.

For the Representative Beneficiary Sample, we selected for the augmented sample approximately 4,000 beneficiaries in each of the three younger age groups (18-29, 30-39, and 40-49) and 2,400 beneficiaries in the oldest age cohort. For Phase 1 Ticket participants, all sample members that had been sampled in round 1 were included in the sample for round 2. For the round 2 cross-sectional sample, we selected a supplemental sample of Phase 1 TTW participants from two sources: (1) Phase 1 Ticket participants in round 1 who had not been selected for the round 1 sample and (2) Phase 1 Ticket participants who started participation after the round 1 sampling file was developed. The size of the augmented supplemental sample was sufficiently large to ensure approximately 2,000 target completes in the Phase 1 sample, though it varied by payment type according to the number of additional Phase 1 sample members needed after accounting for longitudinal cases. For augmented samples of the Phase 2 Ticket participants, we selected approximately 666 participants in each payment-type stratum. These augmented samples were randomly partitioned into subsamples (called “waves”) to allow controlled release of sample throughout the data collection effort. During the data collection period, we monitored the sample results and determined whether, and in which strata and PSUs, additional waves of sampled cases were needed.

III. QUESTIONNAIRE DESIGN

The NBS collects data on a wide range of topics including employment, disability, experience with a variety of SSA programs, employment services used in the past year, health and functional status, health insurance, income and other assistance, and sociodemographic information. The survey items were developed and initially pre-tested as part of a separate contract held by Westat. Revisions were made by MPR to prepare the instrument for CATI/CAPI programming, and additional minor wording changes were made after pretesting. The survey instrument is available from MPR upon request.

To promote response among Hispanic populations, the questionnaire was translated into Spanish. In some cases, because the Spanish speaker was more familiar with a word or term in English than in Spanish, the term was provided in both languages so that interviewers could reinforce the question by using the second language as a probe, if necessary.¹⁰ Measurements were treated in a similar way. Thus, questions that mentioned a specific weight also mentioned the kilogram equivalent.¹¹ Interpreters were used as needed to conduct interviews in languages other than Spanish.

A. QUESTIONNAIRE SECTIONS

The questionnaire is divided into 13 sections, labeled A through M:

- Section A—Introduction and Screener

¹⁰ For example, on item L-5: Did {you/NAME} receive any food stamps last month? Spanish: Recibió {usted/NAME} food stamps o cupones de alimentos el mes pasado?

¹¹ For example, on item Jb-10: {Do you/Does NAME} have any difficulty lifting and carrying something as heavy as 10 pounds, such as a full bag of groceries? Spanish: Tiene {usted/NAME} cualquier dificultad en levantar y cargar algo que pesa hasta unas 10 libras {4½ kilos}, tal como una bolsa llena con compras del mercado?

- Section B–Disability and Current Work Status
- Section C–Current Employment
- Section D–Jobs/Other Jobs During 2004
- Section E–Awareness of SSA Work Incentive Programs and Ticket to Work
- Section F–Ticket Non-Participants in 2004
- Section G–Employment-Related Services and Supports Used in 2004
- Section H–Ticket Participants in 2004
- Section I–Health and Functional Status
- Section J–Health Insurance
- Section K–Income and Other Assistance
- Section L–Sociodemographic Information
 - Section M–Closing Information and Observations.

Detailed descriptions of each section are provided below:

1. Section A–Introduction and Screener

This section confirms that the correct sample person has been contacted and verifies that the sample person is still eligible for the survey. In addition, the screener allowed interviewers to:

- Identify any barriers to participation and, if needed, identify a proxy respondent. The sample member was offered every opportunity to complete the interview himself or herself, and a proxy was only accepted if necessary
- Identify the need for an interpreter for a respondent who spoke a language other than English or Spanish
- Administer a cognitive assessment to ensure that the respondent would be capable of completing the survey.

Due to the complexity of the survey, a cognitive assessment was administered to respondents (both sample persons and proxy respondents) prior to the interview. Respondents were read three questions (a brief description of what it meant that the survey was confidential,

what it meant that the survey was voluntary, and an overview of the study topics) and asked to reiterate the concepts in his or her own words. If the respondent was not able to restate a concept, the question was read a second time. If the respondent could not restate a concept after being asked a second time, he or she was asked if there was someone else who could answer questions about his or her health, daily activities, and any jobs he or she might have (such as a friend, parent, caseworker, or payee). An interview was then pursued with the proxy respondent. To minimize bias in reporting, attitudinal and opinion items were skipped: Proxy respondents were not asked to provide subjective assessments on behalf of the sample person; for example, regarding satisfaction with jobs or programs. The constructed variable C_Rtype indicates whether the sample person or a proxy completed most of the interview.

2. Section B–Disability and Current Work Status

This section collects information on the beneficiary’s limiting physical or mental condition(s) and current employment status. If the beneficiary is not currently employed, the section explores reasons for not working. This section also includes questions designed to determine the job characteristics that are important to beneficiaries and collects information about work-related goals and expectations.

3. Section C–Current Employment

Questions in this section collect detailed information about the beneficiary’s current job(s). Respondents are asked about the type of work performed, type of employer, hours worked, benefits offered, and wages earned. The section also asks about work-related accommodations received, as well as those needed but not received. Other questions solicit information about job satisfaction.

4. Section D–Jobs/Other Jobs During 2004

This section collects information about employment during the 2004 calendar year, including type(s) of employer(s), hours worked, wages earned, and reasons for leaving employment, if applicable. Other questions ask whether beneficiaries worked or earned less than they could have (and if so, the reasons why), and collect information about experiences related to Social Security benefit adjustments due to work.

5. Section E–Awareness of SSA Work Incentive Programs and Ticket to Work

This section includes questions designed to assess whether the beneficiary is aware of, or is participating in, specific SSA work incentive programs and services. For the TTW program, information is collected on how beneficiaries learned about the program, the names of the providers they signed up with, and dates they signed up with their service providers.

6. Section F–Ticket Non-Participants in 2004

This section is administered to beneficiaries not participating in the TTW program and collects data on reasons for nonparticipation. It asks whether the beneficiary has attempted to learn about employment opportunities (including TTW), problems the beneficiary may have had with Employment Networks or other employment agencies, and how those problems were handled or resolved.

7. Section G–Employment-Related Services and Supports Used in 2004

Questions in this section ask beneficiaries about their use of employment-related services in calendar year 2004, including the types of services received, the types of providers used, how long they received services, how the services were paid for, and reasons for and satisfaction with service utilization. Other questions ask about sources of information about services and the nature of any services that were needed but not received.

8. Section H–Ticket Participants in 2004

This section asks 2004 Ticket to Work participants about their experiences with the program, including information related to their decision to participate in the Ticket program, the kinds of information they used to pick their current service providers, development of the individual work plan (IWP), and any problems experienced with services provided by an Employment Network. The section also includes a series of questions about how problems with Employment Networks were resolved and overall satisfaction with the Ticket to Work program.

9. Section I–Health and Functional Status

This section includes questions about the beneficiary’s health status and everyday functioning, including the need for special equipment or assistive devices. Information is solicited regarding general health status (via the SF-8TM scale),¹² difficulties with Activities of Daily Living (ADLs) and Instrumental Activities of Daily Living (IADLs), a variety of functional limitations, substance abuse/dependence (using the CAGE Alcohol Abuse Screener),¹³ and treatment for mental health conditions.

10. Section J–Health Insurance

Questions in this section collect information about the sources of health insurance coverage, both at the time of interview and during calendar year 2004.

¹² SF-8TM is a trademark of QualityMetric, Inc.

¹³ See Mayfield, D., McLeod, G., Hall, P. (1974). The CAGE questionnaire: Validation of a new alcoholism instrument. *American Journal of Psychiatry* 131, 1121-1123.

11. Section K–Income and Other Assistance

Questions in this section ask about sources of income, including income received from earnings, Social Security, workers’ compensation, and other government programs and sources.

12. Section L–Sociodemographic Information

This section collects basic demographic information about the beneficiary, such as race, ethnicity, education, parental education, marital status, living arrangements, and household income.

13. Section M–Closing Information and Observations

In this section, address information is collected for the sample person, and telephone information for up to two contact people is collected for participants who may be selected for future survey rounds. The interviewer also records reasons a proxy or assistance was required, if appropriate, and documents special circumstances.

B. QUESTIONNAIRE PATHING AND RESPONDENT TYPE

Sample members in the Representative Beneficiary Sample and the Ticket Participant Sample received the same version of the NBS questionnaire. Pathing to questions about participation in the TTW Program was not based on sample type, but rather to answers given to items in previous sections (awareness of the program and use of the Ticket). Similarly, both CATI and CAPI respondents received the same questionnaire.

All respondents were asked questions from sections A, B, E, G, I, J, K, L, and M. Only respondents who reported that they were currently working were asked questions from section C. Similarly, only respondents who reported working in 2004 were asked questions in section D. Section F was asked of respondents who reported that they had never tried to get a Ticket from SSA, had never tried to use a Ticket to sign up with a provider, or were not signed up with a

provider in 2004. Only respondents who reported using their Ticket to sign up with a provider in 2004 were asked questions from section H. See Table III.1 for a summary description of the main questionnaire pathing.

The NBS instrument, which is programmed in Blaise, is complex and involves numerous integrated skips, within and across sections. Further complexities in questionnaire pathing are introduced by the utilization of preloaded SSA administrative data and allowances for proxy participation. Preloaded data about respondents' disability-benefits status (SSI, SSDI, or both), the phase of TTW program roll-out, age at which they first received SSI benefits, and TTW participant status, determine pathing for certain survey items. Other administrative variables are used as fills at particular items to provide respondents with local names of programs or to prompt recognition of program participation. See Table III.2 for a complete list and description of preloaded variables. Phase of TTW roll-out was not included as a preload at round 2 since the item that referenced phase at round 1 was deleted at round 2.

Finally, since proxies are necessary when the sample member's disability precludes participation, the instrument was programmed to fill the proper pronoun or name in the question text after the interviewer indicated who the survey respondent would be (sample member or proxy). Additionally, attitudinal and opinion items were skipped for proxy respondents so as to minimize bias in reporting. (See Table III.3 for a complete list of items that were not asked of proxy respondents.) Proxy interviews were completed for 1,793 cases.

TABLE III.1
NBS INSTRUMENT SECTIONS

Section	Title of Section	Respondents Receiving the Section
A	Screener	All respondents
B	Disability/Current Work Status	All respondents
C	Current Employment	Respondents who answer (B24 = YES). Question B24: Are you currently working at a job or business for pay or profit?
D	Jobs/Other Jobs During 2004.	Respondents who answer (B30 = YES). Question B30: Did you work at a job or business for pay or profit anytime in 2004?
E	Awareness of SSA Work Incentive Programs and Ticket to Work.	All respondents
F	Ticket Non-Participants in 2004.	Respondents who answer (E35 = NO, DON'T KNOW, OR REFUSED). Question E35: Did you ever try to get a Ticket from Social Security or anywhere else? OR Respondents who answer (E36 = NO, DON'T KNOW, OR REFUSED). Question E36: Have you ever used your Ticket to sign up with an Employment Network? OR Respondents who answer (E37 = NO, DON'T KNOW, OR REFUSED). Question E37: Were you signed up with any Employment Network or a State Vocational Rehabilitation Agency at any time in 2004?
G	Employment-Related Services and Supports Used in 2004.	All respondents
H	Ticket Participants in 2004.	Respondents who answer (E37 = YES) Question E37: Were you signed up with any Employment Network or a State Vocational Rehabilitation Agency at any time in 2004?
I	Health and Functional Status.	All respondents
J	Health Insurance	All respondents
K	Income and Other Assistance.	All respondents
L	Sociodemographic Information.	All respondents
M	Closing Information and Observations.	All respondents

Source: NBS, round 2.

TABLE III.2
SURVEY PRELOADS

Variable	Definition	Purpose
Bstatus	SSA benefit type (SSI only, SSDI only, or SSI and SSDI) received by sample member.	Used to determine pathing for awareness of SSA work incentive items. Only respondents who received SSDI benefits were asked items E3-E13. Only respondents who received SSI were asked items E15-E18.
DOB	Sample member date of birth.	Reported date of birth (or age) was matched with administrative data to verify that the correct person was contacted in the screener portion of the survey.
ENsample	Name of the Employment Network (EN) to which the sample member's ticket was assigned at the time the TTW Participant Sample was drawn.	Used as a fill at E24 to prompt TTW participants who responded that they had never heard of the TTW program. This item reminds respondents that according to SSA, the sample person's ticket was assigned to this EN (as of the date the sample frame was drawn).
LocalPAA	Name of Local Protection and Advocacy Group in the sample member's state of residence (as reported at time of survey).	Used at items H52, H53, H54, and H55 to identify, by name, the Protection and Advocacy Group in the respondent's area.
SDate	Date sample frame drawn for TTW participants.	Used as fill at E24 to prompt TTW participants who responded that they had never heard of the TTW program. This item reminds respondents that according to SSA, the sample person's ticket was assigned to an EN (as of the date the sample frame was drawn).
SSIage	Age at which sample member first received SSI benefits.	Used to determine pathing at items E11 and E12. Only respondents who received SSI before the age of 22 (and who were also 25 or younger) received these items.
StateMed	State name for Medicaid. Based on state of residence reported at time of survey.	Used at item J2 to identify, by name, the Medicaid program in the respondent's state.
Tstatus	Ticket status at the time the sample frame was drawn.	Used to determine pathing at item E24. Only respondents identified by SSA as being Ticket participants, and who indicated that they had never heard of the TTW program, were asked this item.
VRname	State name for Vocational Rehabilitation Agency. Based on state of residence reported at time of survey.	Used at items B29, E28, E30, E32, F2, F6, F8, F10, F20, F29, H7, H12, H16, H18, H21, and H52 to identify, by name, the Vocational Rehabilitation Agency in the respondent's state.

TABLE III.3
ITEMS SKIPPED FOR PROXY RESPONDENTS

Survey Item	Question Text
C18	Taking all things into account, how satisfied are you with your {main/current} job? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?
C39a-C39l	Thinking about your {main/current} job, how much do you agree with each of the following statements? Would you say you strongly agree, agree, disagree, or strongly disagree?
C39a	The pay is good
C39b	The benefits are good
C39c	The {job security is good/work is steady}
C39d	You have a chance for promotion
C39e	You have a chance to develop abilities
C39f	You have recognition or respect from others
C39g	You can work on your own in your job if you want to
C39h	You can work with others in a group or team if you want to
C39i	Your work is interesting or enjoyable
C39j	Your work gives you a feeling of accomplishment or contribution
C39k	Your supervisor is supportive
C39l	Your co-workers are friendly and supportive
H10a-H10d	Now I'm going to read you some statements about the Ticket to Work Program. For each statement, please tell me if it is something you knew before today or not. Is this something you knew before today or not;
H10b	You can, during any month, take back your Ticket and give it to another Employment Network or participating provider.
H10c	To remain in the program, you must participate in the activities described in your individual work plan during the first few years, and work for 3 to 6 months each year during the later years of your participation.
H10d	While you are working, you can keep your Medicare and /or Medicaid benefits.
H11	Before you started participating, how much would you say you knew about the Ticket to Work Program? Would you say a lot, some, a little, or nothing?
H45	Overall, how satisfied are you with the Ticket to Work program? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?
H58	How satisfied are you with how the problem (with the SVR/EN) was solved? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?
H59	Overall, how satisfied are you with the helpfulness of the {State VR/EN} in trying to solve this problem? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?

C. COMPARISONS WITH OTHER QUESTIONNAIRES AND SURVEYS

The NBS contains a number of questions that are found on other survey instruments. Table III.4 provides the names of the studies from which NBS questions have been drawn, their sponsors (where relevant), and the NBS question number. In some instances, the question was asked on multiple studies, in which case all studies are listed.

TABLE III.4
NATIONAL BENEFICIARY QUESTION SOURCES

D. SPECIAL DESIGN CONSIDERATIONS

The NBS survey population represented a wide range of disabilities with varying degrees of severity; in addition, some sample members had several disabling conditions. While the survey could not be designed to overcome all possible challenges, the instrumentation procedures attempted to address three broad categories of common challenges: (1) communication, (2) stamina, and (3) cognitive barriers. Communication challenges include both hearing and speech impairments. “Stamina challenges” include physical and mental fatigue. Cognitive challenges include, but are not limited to, emotional disturbance, difficulty processing questions and responses, lack of complete or specific knowledge, and confusion about the purpose of the interview (Mitchell et al. 2004).

The NBS survey featured several design techniques designed to overcome these challenges. The interviews could be conducted via text typewriter (TTY), Telecommunications Relay Service (TRS), or instant messaging so that persons with severe hearing or speech impairments could be interviewed by telephone. In addition, to maximize survey participation, in-person interviewers obtained the services of sign language translators and made a range of other accommodations when interviewing persons with hearing impairments in their home.

Structured probes were included in the survey instrument, which allowed questions to be rephrased and concepts defined in a standard manner in the event that respondents required clarification or additional information. Additionally, to minimize item nonresponse, the survey instrument included follow-up questions for continuous variables. For example, if a respondent could not provide an exact amount, the “Don’t know” response was followed with a modified version of the question that offered response categories. The upper and lower bounds of each category were based on ranges specified by analysts.

All respondents were notified in the introduction to the study that if they began to feel tired the interviewer could stop and the interview could be completed at a later time. Interviewers were also trained to check with respondents about their level of fatigue during the interview. If they sensed that a respondent was tiring, they repeated this and asked the respondent if he or she was OK to continue. The instrument was set up so that the interview could be broken off at any time and a call-back time scheduled. In round 2, 1,253 cases (about 12 percent of the total sample) were broken off after the interview began (that is, after the screener and cognitive items had been administered and the respondent was in the body of the questionnaire). Of these, 973 cases were later completed (78 percent); 280 were not completed (22 percent).

In general, we attempted to word survey questions simply, clearly, and briefly as well as in an unbiased manner so that respondents could readily understand key terms and concepts. Given the intent of the questions, response categories were appropriate, mutually exclusive, and reasonably exhaustive.

E. CHANGES MADE TO SURVEY INSTRUMENT AT ROUND 2

Some changes were made to the survey instrument at round 2 to update it for administration in 2005, including: (1) changing reference periods from 2003 to 2004, (2) revising questions that had administration problems at round 1, (3) adding predefined response categories to some open-ended items, and (4) making revisions to accommodate longitudinal respondents who had completed a round 1 interview. These changes are briefly described below.

1. Changes to Reference Periods

Questions that referenced calendar year 2003 during the round 1 survey were changed to 2004. Items affected included those asking about jobs held in 2003, Ticket use in 2003, services received in 2003, TTW participation in 2003, and insurance coverage in 2003. In a few cases, response categories were also edited to reflect the new data collection period.

2. Revisions to Question Wording

In the course of conducting interviewer monitoring and debriefings for the round 1 survey, we identified questions that appeared to be confusing to respondents. We worked with SSA and the analysts to make minor revisions to these items. Appendix B summarizes all of the changes in question content.

3. Changes to Response Categories

During coding of round 1 open-ended items, we identified responses that were commonly given to questions eliciting a verbatim answer. In some cases, these responses were revised or added as predefined response options to the survey item. These additions are summarized in Table III.5.

TABLE III.5
RESPONSE OPTIONS ADDED AT ROUND 2

Survey Item	Response Option Added
G9. Was this place a:	“Workforce Center or Employment/ Unemployment Office” was added
G13. Thinking about {NEW PROVIDER FROM G11}, was this place:	“School or College” was added
G45. In 2004, who paid for the services {you/NAME} received from {PROVIDER NAME IF USED IN 2003}?	Response category changed from “Health Insurance” to “Health Insurance / Other Insurance”
G53. The next few questions are about why {you/NAME} decided to use the employment, medical, and therapy services {you/he/she} used in 2003.	Response category changed from “To Improve Health” to “To Improve Health / Well-Being” and category “To be more Independent” was added.
G56. How did {your/NAME’s} {FILL PERSON(S) FROM G55} pressure {you/him/her} to use these services?	Response category changed from “Would Not Take ‘No’ for an Answer” to “Encouraged / Would Not Take ‘No’ for an Answer”
I32. What devices, equipment, or other types of assistance {do you/does NAME} use?	Response category changed from “Personal Care Attendant” to “Personal Care Assistant”
M14. Why was an assistant/proxy needed?	“Respondent Failed Cognitive Test” was added

Source: NBS, round 2.

4. Changes Made to Accommodate the Longitudinal Participant Sample

Revisions to questionnaire pathing and question wording were made to accommodate longitudinal cases that responded to the survey in round 1. These included revising introductory and transitional text as well as skipping items that it was not necessary to ask again. These revisions are summarized in Appendix C.

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

IV. DATA COLLECTION

The NBS was executed as a dual-mode survey. Initial interview attempts were made using computer-assisted telephone interviewing (CATI) followed by computer-assisted personal interviewing (CAPI) of nonrespondents. CAPI interviews were attempted with respondents who requested an in person interview, those who needed an in-person interview to accommodate a disability, and those did not have telephones or whose telephone number could not be located. If a sample person was not able to participate in the survey due to his or her disability, a proxy respondent was sought. If no proxy was available and an in-person interview was not possible, the final status of the case was classified as a nonresponse. Sample persons or proxies who requested an in-person interview and who were eligible for field follow-up were held for the start of CAPI data collection.

CATI data collection began in February 2005¹⁴. In person locating and interviewing of telephone nonrespondents and beneficiaries who requested an in-person interview began in May 2005 and continued, concurrent with CATI interviewing, through September 2005. In total 8,106 cases were completed (including 29 partially completed interviews)—4,864 from the Representative Beneficiary Sample and 3,091 from the Phase 1 and Phase 2 Cross-Sectional Samples. An additional 151 cases were not eligible for the Phase 1 Cross-Sectional Sample, but are included on the data file as completed interviews from the Longitudinal Ticket Participant Sample (for a total of 3,242 Ticket Participant complete interviews)¹⁵.

¹⁴ Interviewing began approximately eight months after the sample was selected.

¹⁵ Partial interviews were considered as completed if responses were provided through section H of the interview (or if the respondent was not eligible to receive section H, through section G of the interview).

MPR conducted a CATI pretest in December 2003 to test the programmed instrument prior to fielding. Overall, 74 pretest interviews were completed--thirty-two with participants and 42 with nonparticipants. As a result of the pretest, minor instrument changes were identified and programming problems corrected prior to full-scale CATI interviewing. More details of the pretest can be found in the NBS round 1 User's Guide (Wright et al 2007).

A. DATA COLLECTION PROCEDURES

1. Advance Contacts

In an effort to increase respondent trust and rapport, all sample members for whom MPR had a valid address were sent an advance letter and a list of frequently asked questions and answers before the start of data collection. The advance letter, printed on SSA letterhead and signed by an SSA official, identified SSA as the sponsor of the survey and MPR as the survey contractor, explained the purpose of the survey, offered assurances of confidentiality, described the voluntary nature of participation, and included a toll-free number, a TTY number, and an e-mail address for respondents to use to contact MPR with questions or to complete the interview at their convenience. To encourage participation and show appreciation for response, a post-paid incentive payment of \$10 was offered to respondents who completed the survey. The advance letters indicated that the interview could be conducted in the sample person's home if he or she was unable to respond by telephone because of a disability. Longitudinal sample members were sent a version of the letter reminding them that they had been contacted the previous year regarding the study and letting them know that we would like to talk to them again in 2005.

In an additional effort to help establish legitimacy, SSA posted information about the survey on the agency Web site and circulated information describing the survey to SSA field offices and the SSA teleservice (800) center. Field offices and the SSA teleservice (800) center were also sent the names of telephone and in-person interviewers involved in the NBS so that these

individuals could be identified as legitimate contacts. If upon receipt of the advance letter, disability beneficiaries contacted their local field office or the SSA 800 number with questions about the survey or its legitimacy, SSA staff could then assure beneficiaries of the study's legitimacy and encourage them to participate.

2. Interviewer Training

CATI interviewers received 14 hours of training over four sessions in February 2005. The CAPI interviewers were trained in three separate 24-hour trainings with each training split across three days. The NBS training included providing interviewers with the background and purpose of the study, a question-by-question review of the instrument, contact protocols, refusal avoidance strategies, and a series of practice interviews. In addition, sensitivity training was included, emphasizing the importance of patience, professionalism, and showing unconditional positive regard for respondents regardless of their impairments. Trainers stressed that the greatest barriers faced by people with disabilities are often others' prejudgments and erroneous images of them. Interviewers were trained to use positive rather than patronizing language and were encouraged to focus on the individual first and the disability last.

To overcome stamina challenges, interviewers were trained to be aware of behaviors that might indicate that a respondent was too fatigued to continue. If a respondent seemed tired, agitated, or distracted, for example, interviewers were encouraged to ask whether the respondent needed to take a break and schedule another time to continue and to set appointments for times when the respondent was most alert. To overcome cognitive challenges, the training focused on neutral, nondirected probing methods (repeating the question, repeating the response categories, asking for more information, stressing generality, stressing subjectivity, and zeroing in) and using active listening skills and patience. Interviewers were instructed to provide neutral feedback and encouragement throughout the survey. They were trained to help keep the

respondent free of distractions, to say the respondent's name often, and to avoid using an exaggerated inflection or tone of voice.

3. Locating

Sample member contact information was provided by SSA from administrative records. Prior to the mailing of the advance materials, all addresses were verified or updated using a commercially available database. Over the course of the round 2 data collection, 42 percent of telephone numbers initially provided were identified as invalid and were sent to central office locating. MPR used a variety of techniques for locating updated information, including database searches, calling relatives and friends, receiving updated contact information from SSA, and making in-person visits for field locating. Due to these efforts, approximately 92 percent of the sample was eventually located for interviewing or determined to be ineligible. Of the located sample, 71 percent completed the interview.

4. CATI Data Collection

CATI data collection began in February 2005. In total, 6,371 cases were completed by telephone (79 percent of completes). Seventy-four percent of the Representative Beneficiary Sample completes (n=3,590) and 86 percent of the Ticket Participant Sample completes (n=2,781) were completed via CATI. Approximately 58 percent of the total completes were obtained before the start of CAPI data collection (May 2005). The telephone survey took, on average, 47 minutes to administer. The interview length ranged from 15 to 185 minutes excluding TTY, TRS, and instant messaging interviews.

a. Assistive Technologies

Several technologies were available to assist with interviewing deaf and hard-of-hearing sample persons by telephone including phone amplifying volume controls, an in-house TTY

machine, TRS, and instant messaging. To minimize respondent burden when using TTY, TRS, and instant messaging, an electronic version of the instrument was maintained that included standard TTY abbreviations and punctuation [such as “ga” (go ahead), “nu” (number), “oic” (oh, I see)], which interviewers could use to “cut” the question text from the electronic file and “paste” into the TTY text box or instant messaging screen to ask a question. Respondents’ answers were then entered into the computerized survey instrument on a second PC. Despite these efforts, the average length of a TTY interview was considerably longer than that of a non-TTY interview. For round 2 of the NBS, the average time to complete a TTY interview was approximately two and 1/2 hours and often required several sessions. The shortest TTY interview was one hour and 10 minutes, the longest was five and 1/2 hours over several sessions. Interviews conducted by instant messaging were generally about one-third shorter than those using TTY.

For round 2, we identified 78 respondents who were hearing impaired and could potentially be interviewed using TTY, TRS, or instant messaging. In 28 cases, the sample member completed the interview: 7 by TTY, 2 by TRS, 4 by instant messaging, 1 by video relay, and 14 with an in-person interviewer. An additional 12 were completed by proxy. The remainder either did not answer the TTY call or refused, usually citing length of the interview.

5. CAPI Data Collection

In-person interviewing was employed to maximize access to the survey among persons with disabilities. In-person administration can facilitate interviewing of persons with hearing and speech limitations who are unable to participate by telephone, can permit in-person assistance to persons with cognitive challenges, and can improve the locating rate through in-field searching (Mitchell et al. 2004). To control costs, attempts were first made to contact and interview sample

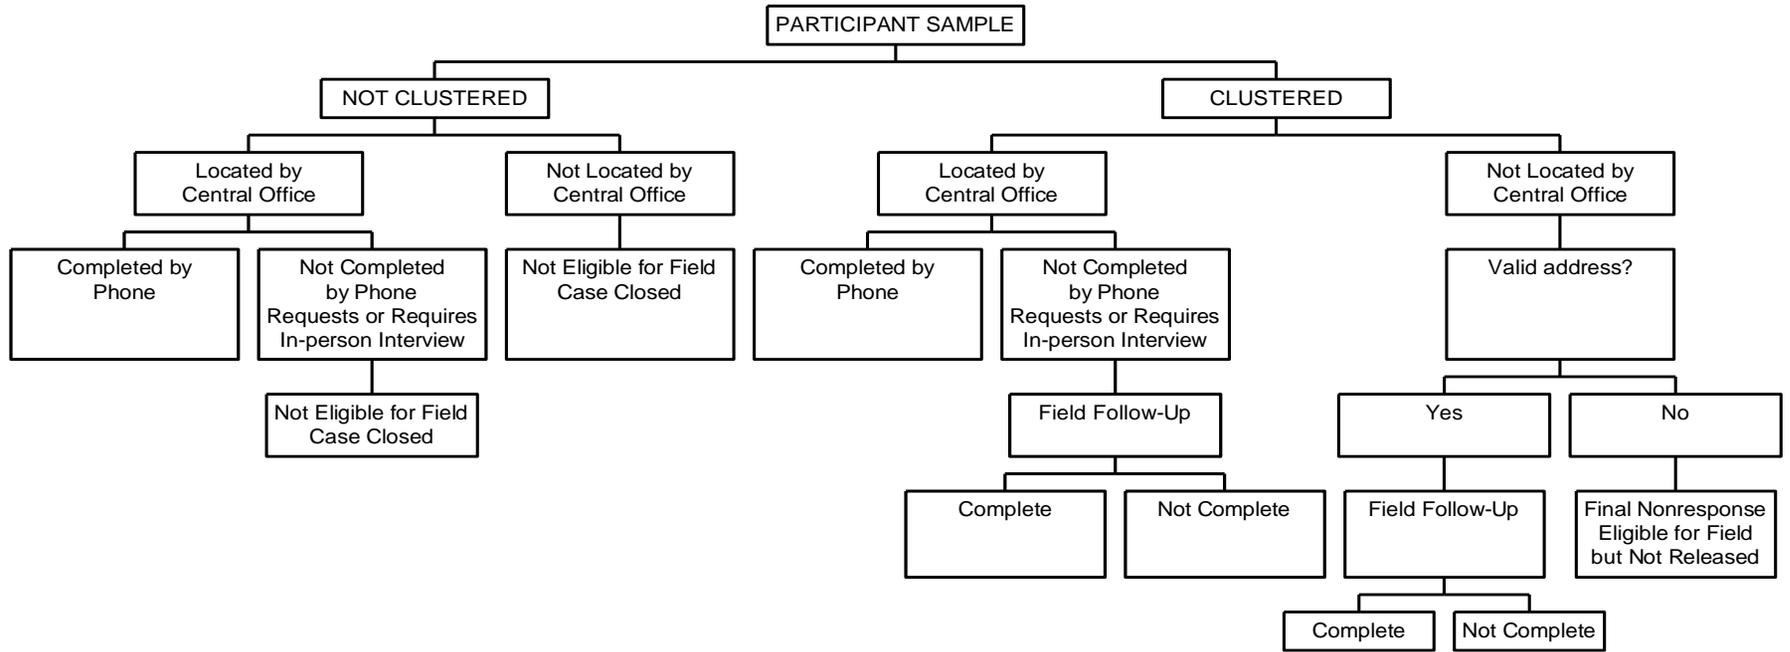

persons via telephone. CAPI interviews were then offered to anyone who requested an in-person interview or who needed an in-person interview to accommodate a disability.

All cases referred for in-person interviewing (refusals, those who were evasive to telephone attempts, and those who requested an in-person interview) were first sent to central office locating. Locating verified or updated the telephone and address if possible before the case was assigned to a field interviewer and provided the field interviewer with a listing of previous addresses. Additionally, cases for which a telephone number could not be located were flagged for CAPI follow-up. As discussed in Chapter II, the unlocated, unclustered outcome-only Ticket Participant Sample was not eligible for CAPI field treatment. For the purpose of data collection, clustered and unclustered cases were subjected to identical predetermined central office locating procedures. Once central office locating was exhausted, clustered cases were sent to the field for in-person locating and unclustered cases were put on hold and received no further locating treatment. See Figure IV.1 for a summary of the CAPI Ticket Participant Sample administration. In all, 3,411 cases, or approximately 30 percent of the total sample, were sent to CAPI interviewers to be conducted in-person. Of these, 60 percent were completed; 251 (7 percent) via CATI, and 1,799 (53 percent) by field interviewers. Field interviewers were trained to encourage sample persons to call in and complete the survey by telephone once they were located to save on data collection costs. Twenty-six percent of the Representative Beneficiary Sample completes (n=1,274) and 14 percent of Ticket Participant completes (n=461) were obtained via CAPI.

Most cases that were sent to the field (57 percent) were sent because they could not be located or did not have a telephone. Another 19 percent were sent to the field because the sample person initially refused a CATI interview. An additional 23 percent were sent to the field because they were difficult to contact via telephone or had evaded contact efforts. The remaining one percent of cases were sent to the field because they requested an in-person interview.

FIGURE IV.1

NATIONAL BENEFICIARY SURVEY - SAMPLE ADMINISTRATION

To ensure that the highest-quality CAPI data were collected, several Quality Assurance (QA) procedures were in place. Early CAPI data were reviewed for the frequency of item nonresponse and other data problems. Using this information, feedback and additional instruction were given to interviewers who needed it. Second, interview length was checked for patterns of especially lengthy or short interviews, since consistently short or long interviews might indicate data forgery or other problems. Finally, 10 percent of each interviewer's cases were randomly selected and verified by either telephone or mail. During the verification, respondents were asked how long the interview lasted, whether the interviewer used a laptop, and what types of questions were asked. In addition, some questions were re-asked to ensure that the answers are the same as those recorded during the interview.

6. Assisted Interviews and Proxy Respondents

To increase opportunities for self-response, “assisted” interviews were also permitted. These interviews were different from proxy interviews because beneficiaries answered most questions themselves. The assistant, typically a family member, provided encouragement, interpretation, and verified answers when needed. In the NBS, we allowed assisted interviews in order to minimize item nonresponse, improve the accuracy of responses, and overcome less limiting conditions (such as difficulty hearing) and language barriers. In all, 309 assisted interviews were conducted (approximately 4 percent of all completes) during round 2.

As a last resort, proxy respondents were used to complete the survey on behalf of respondents who could not complete the survey themselves (even with assistance) either by telephone or in-person. This included sample persons with severe communication impairments, those with severe physical disabilities that precluded participation (in any mode), and those with mental impairments that might have compromised data quality. Using the beneficiary instead of a proxy when possible was strongly favored because sample members generally provide more

complete and more accurate information than proxy respondents. However, allowing the use of proxies when necessary minimized the risk of nonresponse bias that would have resulted from the exclusion of individuals with severe physical or cognitive impairments.

In the NBS, we used an innovative “mini-cognitive test” designed expressly for the survey to identify when proxy respondents were needed.¹⁶ The screener provided interviewers with a tool for evaluating when to seek a proxy rather than leave the decision to their discretion or to gatekeeper advice. The test combined the ability to understand the survey topics with elements of informed consent.

Specifically, we asked three questions at the start of the interview. First, we gave a general description of the survey topics to be covered (your health, daily activities, and any jobs you might have) and asked the respondent to state the topics in his or her own words. Second, we described the voluntary nature of the survey and asked respondents to state, in their own words, what that description meant to them. Third, we described the confidential nature of the respondents’ answers and asked them to state what that description meant. If respondents were unable to restate accurately any description after two attempts, we asked if someone else could answer questions on their behalf.

For cases in which a sample person or knowledgeable informant expressed that a proxy would be necessary, several guidelines were used to determine whether a proxy would be appropriate. These guidelines included using proxies only when the sample member’s physical or mental condition precluded self-response, selecting the most knowledgeable proxy, and ensuring that the proxy answered on behalf of the sampled respondent rather than offering his or

¹⁶ Westat designed the test as part of the design of the Ticket to Work evaluation; MPR modified it after pretesting.

her own opinions. Interviewers were trained to overcome gatekeepers' objections, and to give sample members the opportunity to speak for themselves whenever possible.

At round 2, proxy interviews were completed for 1,793 sample persons (22 percent of all completes). In most cases (approximately 80 percent), a proxy was necessary because the sample person failed the cognitive assessment or was otherwise determined to be unable to respond due to a cognitive or mental impairment. Interviews were completed by proxy for 1,371 sample persons in the Representative Beneficiary Sample (28 percent of completes) and 422 sample persons in the Ticket Participant Sample (13 percent of completes).

B. CASE DISPOSITION SUMMARIES

A total of 4,864 cases from the Representative Beneficiary Sample and 3,091 cases from the Ticket Participant Sample Cross-Sectional Sample were completed; 375 beneficiaries and 63 TTW participants were determined to be ineligible for the survey. Ineligible cases included sample persons who were deceased, no longer living in the continental United States, who were incarcerated or institutionalized, or who were denied benefits since the time of sample selection or who had never received SSA benefits. An additional 151 Ticket Participant Phase 1 Longitudinal cases were completed that were not eligible for the round 2 cross-sectional sample (for a total of 3,242 Ticket Participant completes in all). Table IV.1 provides a summary of final case disposition for all released cases in the cross-sectional sample by sampling strata. Table IV.2 shows case dispositions for the Ticket Participant Longitudinal Sample.¹⁷

¹⁷ Longitudinal cases eligible for round 2 are also included in Table IV.1 as part of the Phase 1 cross-sectional sample.

Source: NBS round 2.

Note: The number of completed cases includes 29 partial completes: 12 in the Ticket Participant Sample and in the 17 Representative Beneficiary Sample.

^a The total number of Ticket Participant cases in the round 2 Cross-Sectional Sample does not include 266 cases from the longitudinal sample that were not eligible for the Phase 1 Cross-Section (were not TTW Participants at round 2). Total participant completes include 151 cases from the longitudinal sample that were not eligible for the Phase 1 Cross-section (were not Ticket to Work participants at round 2).

C. LONGITUDINAL RESPONSE

At round 2, interviews were attempted with all sample members selected into the Phase 1 Ticket Participant Longitudinal Sample, whether or not they had completed an interview at round 1. Interviews with completed with 1,019 longitudinal cases (70 percent of the total sample) for an overall weighted response rate of 78.2 percent. Of the Phase 1 longitudinal cases, 897 (61 percent of the total sample), completed a round 1 and a round 2 interview (see Table IV.3)

TABLE IV.3

V. VARIABLE CONSTRUCTION AND EDITING

The NBS data files contain several types of variables: unedited and edited questionnaire variables, imputed variables and imputation flags, coded verbatim responses, variables masked for the Public Use File, constructed variables derived from questionnaire variables, weights, survey administration variables, and SSA administrative data.¹⁸ This chapter provides an overview of the types of variables on the file and variable naming conventions as well as additional details on coded items and select constructed variables.

A. EDITING OF QUESTIONNAIRE VARIABLES

Questionnaire variables are survey items collected directly from the respondent. On the NBS data files, these variables are distinguished by a two-part name with the first part of the variable name representing the section of the questionnaire where the question originates and the second part of the variable name representing the numerical question from the questionnaire (for example, question F11 comes from section F of the questionnaire and is question 11). Variables on the file are also preceded by an R2_ to identify them as round 2 variables.

The NBS data were thoroughly reviewed for discrepancies that might have resulted from programming or interviewer errors. Editing was performed to resolve any inconsistencies in skip patterns. Editing also included a review and resolution of some outlier values by recoding either to an appropriate valid value or to a value of missing (.D=don't know). For key variables, these responses were imputed along with other missing values. In consultation with SSA and research analysts, we took the general approach of editing only those cases where there appeared to be an

¹⁸ In general, unedited variables are those which contain the original response to a single questionnaire item.

obvious data entry or respondent error. As a result, while a substantial amount of time was spent meticulously reviewing individual responses, some suspect values remain on the file. For more information on data problems and the completeness of the survey data set, see the “National Beneficiary Survey: Round 2 Data Cleaning and Identification of Data Problems Report” (Wright and Barrett 2008).

B. IMPUTATION OF MISSING VALUES

A case may be missing data for a particular item because the item was logically skipped (the respondent was not eligible to receive the item), the respondent refused the item or gave a “don’t know” response, there was an interviewer or programming error that resulted in a loss of data, or the case was a partial complete and is missing data for some items in the survey. Data for cases completed up through H61 (or G61 if the respondent was not eligible for section H) were included on the file as partial completes. All subsequent items for these cases were coded as .P. Table V.1 provides a summary of missing value codes and their description. For NBS, missing data due to don’t know or refused responses and those missing because the case was partially completed (.D, .R, and .P) were imputed for selected variables on the file.

TABLE V.1
MISSING VALUES AND DESCRIPTION

Value	Description
L	Logical skip: respondent not eligible to receive the item
D	Don’t know: respondent did not know how to answer the item
R	Refused: respondent refused to provide a response to the item
M	Missing data: data are missing due to interviewer or programming error
P	Partial complete: data are missing due to partial interview

Source: NBS, round 2.

Variables were selected for imputation based on their level of missing data and their analytic importance. Variables imputed included those related to race and ethnicity, disability status, current employment, health, income, and personal and household characteristics. A complete list of variables selected for imputation and the specific imputation procedures employed for each item can be found in Chapter VII. Imputed variables share the same name as the original variable but end in an “_i”. The original non-imputed variables are retained on the Restricted Access File. Imputation flags are also included on the Restricted Use File and indicate that a case has been imputed and describes the method of imputation (see Table V.2). At round 2, the flag “7=Longitudinal Imputation” was added indicating that for some variables, the imputed value from round 1 was used. Imputation flag variables share the same name as the original variable and end in “_iflag” (for example, “BMI_cat_i” is the imputed version of the constructed variable C_BMI. BMI_cat_iflag indicates which cases were imputed and the method used for that imputation).

TABLE V.2
IMPUTATION FLAG VALUES AND DESCRIPTION

Imputation Flag Value	Description
0	No Change
1	Logical Imputation
2	Administrative Data
3	Hotdeck Imputation
4	Imputed by Distributional Assumptions
5	Imputed by Descriptive Statistic
6	Constructed from Imputed variables
7	Longitudinal Imputation

C. CODING OF VERBATIM RESPONSES

The NBS questionnaire includes a number of questions designed to elicit open-ended responses. To make it easier to use the data connected with these responses in an analysis, we grouped the responses and assigned them numeric codes when possible. The methodology used to code each variable depended upon the content of the variable. Three kinds of questions (described below) on the NBS did not have designated response categories; rather, the response to these questions was recorded verbatim:

1. ***Open-ended questions*** have no response options specified (such as E43—Why are you no longer receiving services from your employment network?). For these items, interviewers recorded the verbatim response. Using common responses, we developed categories and reviewed them with analysts. Coders then attempted to code the verbatim response into an established category. If the response did not fit into one of those categories, it was coded as “other.”
2. ***“Other/specify”*** is a response option for questions that have a finite number of possible answers that may not necessarily capture *all* possible responses. A good example is: “Did you do anything else to look for work in the last four weeks that I didn’t mention?” For questions of this type, respondents are asked to specify an answer to the question “anything else?” or “anyone else?”
3. ***Field-coded responses*** are answers coded by interviewers into a predefined response category without reading the categories aloud to the respondent. If none of the response options seem to apply, interviewers select an “other specify” category and type in the response.

As part of data processing at round 1, we examined a portion of all verbatim responses in an attempt to uncover dominant themes for each question. Based on this initial review, we developed a list of categories and decision rules for coding verbatim responses to open-ended items. In addition, supplemental response categories were added to some field-coded or other/specify items to facilitate coding if there were enough such responses and they could not be back-coded into pre-existing categories. (A list of all open-ended items assigned additional categories during the coding process appears in Appendix D.) Thus we categorized verbatim responses for quantitative analyses by coding responses that clustered together (for open-ended

and “other/specify” responses) or by back-coding responses into existing response options if appropriate (for “field-coded” and “other/specify” items). Categories developed during round 1 and round 2 coding were applied at round 3. Additional categories were added at round 2 for a small number of items if there were a significant number of common responses that did not fit into previously developed categories. If during coding, it became apparent that changes to the coding scheme were necessary (for example adding additional categories or clarifying coding decisions), new decision rules were discussed and documented. Verbatim responses were sorted alphabetically by item for coders and could be filtered by coding status so that new decision rules could be easily applied to cases that had been previously coded. When it was impossible to code a response, when responses were invalid, or when they could not be coded into a given category, we assigned a two-digit supplemental code to the response (see Table V.3). The verbatim responses themselves are excluded from the data files. (See Barrett and Wright (2008) for full details regarding the back-coding procedures.)

TABLE V.3
SUPPLEMENTAL CODES FOR OTHER/SPECIFY CODING

Code	Label	Description
94	Invalid Response	Indicates that the response should be deleted.
95	Refused	The verbatim indicates the respondent refused to answer the question.
96	Duplicate Response	The verbatim response has already been selected in a ‘code all that apply’ item.
98	Don’t Know	The verbatim indicates the respondent did not know the answer.
99	Not Codeable	Indicates that a code cannot be assigned based on the verbatim response.

Source: NBS, round 2.

Two special cases of verbatim response coding are discussed in more detail below: health condition, and industry and occupation coding.

1. Health Condition Coding

Responses to questions on health conditions required a specific type of open-ended coding. In Section B of the questionnaire, each respondent was asked to cite the main and secondary physical or mental conditions that limit the kind or amount of work or daily activities he or she can do. Main conditions could be reported as one of four items: B2 (main reason limited), B6 (main reason eligible for benefits), B12 (main reason was eligible for benefits if not currently eligible), and B15 (main reason limited when first started getting disability benefits). The main purpose of items B6, B12, and B15 was to collect information on a health condition from people who reported no limiting conditions in B2. For example, if respondents said that they had no limiting conditions, they were asked if they were currently receiving benefits from Social Security. If they answered “yes,” they were asked for the main reason that made them eligible for benefits (B6). If respondents said that they were not currently receiving benefits, they were asked whether they had received disability benefits in the last five years. If they answered “yes,” they were asked for the condition that made them eligible for Social Security benefits (B12), or for the reason that first made them eligible if they no longer had that condition (B15). If respondents said that they had not received disability benefits in the last five years, they were screened out of the survey and coded as ineligible. Each response to B2, B6, B12, and B15 was assigned a value for the three constructs. Although respondents were asked to cite one “main” condition in B2, B6, B12, or B15, many listed more than one. These additional responses were maintained under the main condition variable and coded in the order in which they were recorded. Longitudinal cases that completed rounds 1 or 2 skipped items B6, B12, and B15 at round 3.

For each item on a main condition, respondents were also asked to list any other, or secondary, conditions. For example, respondents reporting a main condition at B2 were asked at B4 to list other conditions that limited the kind or amount of work or daily activities they could

do. Respondents reporting the main reason they were eligible for disability benefits (at B6) were asked at B8 to list other conditions that made them eligible. Finally, respondents who reported that they were not currently receiving benefits and who reported a main condition at B12 (the condition that made them eligible to receive disability benefits in the last five years) were asked at B14 for other reasons that made them eligible for benefits. Those who reported that their current main condition was not the condition that made them eligible for benefits, and who were asked for the main reason they were first limited, were also asked if there were any other conditions that had limited them when they first started receiving benefits (B17).

As in round 1, the respondents' verbatim responses were coded according to the International Classification of Diseases, 9th revision, Clinical Modification (ICD-9-CM) five-digit coding scheme. The ICD-9 is a classification of morbidity and mortality information that was developed in 1950 to index hospital records by disease for data storage and retrieval. The ICD-9 was available in hard copy for each of the coders. Coders, many of whom had previous medical coding experience, attended an eight-hour training session before coding and were instructed to code to the highest level of specificity possible. Responses that were not specific enough for a five-digit code were coded to four (subcategory) or three digits (category codes). Responses that were not specific enough for even three- or four-digit ICD-9 codes were coded either as a physical problem (not specified) or to broader categories representing disease groups. (See Table V.4 for a list of the broad categorical and supplementary codes.) Although respondents were asked to cite one "main" condition in B2, B6, B12, or B15, many listed more than one. In cases in which multiple, distinct conditions were provided by the respondent, all conditions were coded (for instance, three distinct conditions would be recorded and coded as B2_1, B2_2, and B2_3).

TABLE V.4

BODY SYSTEM DIAGNOSIS GROUPS
(C_MAINCONBODYGROUP_1-_9, C_SECCONBODYGROUP_1-_9, C_REASBECELIGBODYGROUP)

Code	Label	Description of ICD-9 codes	ICD-9 and Two digit codes
00	Other	Other and unspecified infectious and parasitic disease; alcohol dependence syndrome and drug dependence; learning disorders and developmental speech or language disorders; complications of medical care, not elsewhere classified	136.0-136.9, 303.00-304.90, 315.00-315.39, 999.0-999.9
01	Infectious and parasitic diseases	Borne by a bacterium or parasite and viruses that can be passed from one human to another or from an animal/insect to a human including tuberculosis, HIV, other viral diseases, and venereal diseases (excluding other and unspecified infectious and parasitic diseases)	001.0-135, 137.0-139.8, 01
02	Neoplasms	New abnormal growth of tissue, i.e., tumors and cancer, including malignant neoplasms, carcinoma in situ, and neoplasm of uncertain behavior	140.0-239.9, 02
03	Endocrine/nutritional disorders	Thyroid disorders, diabetes, abnormal growth disorders, nutritional disorders, and other metabolic and immunity disorders	240.0-279.9, 03
04	Blood/blood-forming	Diseases of blood cells and spleen	280.0-289.9, 04
05	Mental disorders	Psychoses, neurotic and personality disorders, and other non-psychotic mental disorders including mental retardation (excluding alcohol and drug dependence and learning, developmental, speech, or language disorders)	290.0-302.9, 305.00-314.9, 315.4-319, 05
06	Diseases of nervous system	Disorders of brain, spinal cord, central nervous system, peripheral nervous system, and senses including paralytic syndromes, and disorders of eye and ear	320.0-389.9, 06
07	Diseases of circulatory system	Heart disease, disorders of circulation, and diseases of arteries, veins, and capillaries	390-459.9, 07
08	Diseases of respiratory system	Disorders of the nasal, sinus, upper respiratory tract, and lungs including chronic obstructive pulmonary disease	460-519.9, 08
09	Diseases of digestive system	Diseases of the oral cavity, stomach, esophagus, and duodenum	520.0-579.9, 09
10	Diseases of genitourinary system	Diseases of the kidneys, urinary system, genital organs, and breasts	580.0-629.9, 10
11	Complications of pregnancy, child birth, and the puerperium	Complications related to pregnancy or delivery, and complications of the puerperium	630-677, 11

TABLE V.4 (continued)

Code	Label	Description of ICD-9 codes	ICD-9 and Two digit codes
12	Diseases of skin/ subcutaneous tissue	Infections of the skin, inflammatory conditions, and other skin diseases	680.0-709.9, 12
13	Diseases of musculoskeletal system	Muscle, bone, and joint problems including arthropathies, dorsopathies, rheumatism, osteopathies, and acquired musculoskeletal deformities	710.0-739.9, 13
14	Congenital anomalies	Problems arising from abnormal fetal development, including birth defects and genetic abnormalities	740.0-759.9, 14
15	Conditions in the perinatal period	Conditions that have origin in birth period even if disorder emerges later	760.0-779.9, 15
16	Symptoms, signs, and ill-defined conditions	Ill-defined conditions and symptoms; used when no more specific diagnosis can be made	780.01-799.9, 16
17	Injury and poisoning	Problems that result from accidents and injuries including fractures, brain injury, and burns (excluding complications of medical care not elsewhere classified)	800.00–998.9, 17
18	Physical problem, NEC	The condition is physical, but no more specific code can be assigned.	18
95	Refused	Verbatim indicates respondent refused to answer the question.	No ICD-9 codes
96	Duplicate condition reported	The condition has already been coded for the respondent.	No ICD-9 codes
97	No condition reported	The verbatim does not contain or symptom to condition to code.	No ICD-9 codes
98	Don't know	The respondent reports that he/she does not know the condition.	No ICD-9 codes
99	Uncodeable	A code cannot be assigned based on the verbatim response.	No ICD-9 codes

Source: NBS, round 2.

We ensured that responses were coded according to the proper protocols in several ways. First, we did an initial quality assurance check, per coder, for the first several cases that were coded. In addition, cases were randomly selected during the coding process for supervisor review. In total, approximately 15 percent of all coded responses were reviewed by a supervisor,

including cases flagged by coders for review that they were unable to code or did not know how to code. Approximately 5 percent of all cases were recoded. In the course of this work, additional decision rules were developed to clarify and document the coding protocol. These decisions were discussed with coders and posted to ensure that responses were coded consistently and accurately throughout the coding process. As for other open-ended items, when new decision rules were added, previously coded responses were reviewed and re-coded if necessary.

After the ICD-9 coding was complete, we processed the health condition variables into a series of constructed variables that grouped health conditions into broad disease groups. In addition to the body system classifications represented in Table V.4 (C_MAINCONBODYGROUP_1-9, C_SECCONBODYGROUP_1-9), primary diagnosis groups were formed that provide separate categories for HIV/AIDS, schizophrenia, major affective disorders, mental retardation, visual impairments, hearing impairments, and speech disorders (C_MAINCONDIAGGRP_1-9, C_SECCONDIAGGRP_1-9; see Table V.5 for codes). Additional constructs collapse these categories into four broad groups and are provided on the Public Use File (C_MAINCONCOLDIAGGRP_1-9, C_SECCONCOLDIAGGRP_1-9; see Table V.6 for codes). A set of separate constructs was also created to summarize responses provided at B6, B12, and B15 (C_REASBECELIGICD9, C_REASBECELIGDIAGGRP, C_REASBECELIGCOLDIAGGRP, and C_REASBECELIGBODYGROUP) These constructs clarify the eligibility of sample members who indicate at B1 and B2 that they do not have a disabling condition.

Source: NBS, round 2.

2. Industry and Occupation

Information about the sample member's current employment and employment in 2003 was collected in section C and section D of the questionnaire. For each job, respondents were asked to list their occupation (C2 and D4) and the type of business or industry (C3 and D5) where they were employed. Verbatim responses to the occupation items were coded using the Bureau of Labor Statistics' 2000 Standard Occupational Classification (SOC).¹⁹ The SOC is a system for classifying all occupations in the economy, including private, public and military occupations in which work is performed for pay or profit. Occupations are classified based upon work performed, skills, education, training, and credentials. The sample member's occupation was assigned one occupation code. The first two digits of the SOC codes classify the occupation to a major group and the third digit to a minor group. For NBS, we assigned three-digit SOC codes to describe the major group the occupation belonged to and the minor groups within that classification (using the 23 major groups and 96 minor). See Appendix E for a list of the three-digit minor groups classified by major groups.

Verbatim responses to the industry items were coded using the 2002 North American Industry Classification System (NAICS).²⁰ The NAICS is an industry classification system that groups establishments into industrial categories based on the activities in which those establishments are primarily engaged. The NAICS uses a hierarchical coding system to classify all economic activity into 20 industry sectors. For the NBS, we coded NAICS industries to three digits: the first two numbers specify industry sector and the third number specifies the sub-

¹⁹ See Standard Occupational Classification Manual, 2000 or <http://www.bls.gov/soc/> for more information.

²⁰ See North American Industry Classification System, 2002 or <http://www.naics.com/info.htm> for more information.

sector. See Appendix F for a list of the industries and codes. Both the SOC and NAICS coding schemes are used in most federal surveys and provide uniformity and comparability across data sources.

MPR developed supplemental codes for responses to questions about occupation and industry that were not codeable to a three-digit SOC or NAICS code. Table V.7 lists the occupation and industry supplemental codes.

TABLE V.7
SUPPLEMENTAL CODES FOR OCCUPATION AND INDUSTRY CODING

Code	Label	Description
94	Sheltered workshop	Code used if occupation is part of sheltered workshop
95	Refused	The respondent refuses to give his/her occupation or type of business.
97	No occupation or industry reported	No valid occupation or industry is reported in the verbatim.
98	Don't know	The respondent reports that he/she does not know the occupation or industry.
99	Uncodeable	A code cannot be assigned based on the verbatim response.

Source: NBS, round 2.

In total, approximately 20 percent of all coded responses were reviewed by a supervisor, including cases flagged by coders for review that they were unable to code or did not know how to code. Approximately 10 percent of all cases were recoded.

The verbatim responses provided at C2 and C3 are not included on the data file. The coded responses to C2 for each job listed are found in the constructed variables C_MainCurJobSOC, C_CurJob2SOC- C_CurJob4SOC. The coded responses to C4 are found in C_MainCurJobNAICS, C_CurJob2NAICS- C_CurJob4NAICS.

D. CONSTRUCTED VARIABLES

The NBS data file preparation included creating more than 300 constructed variables in order to simplify the data file and assist the user. Constructed variables are created by combining information from two or more other sources of data to create one variable. The algorithms and specifications used to create the constructed variables are included in the data file codebooks.

Constructed variables are positioned to appear at the end of the section of variables from which they were created. All constructed variables begin with “C_” succeeded by a brief description of what the variable measures (for example, “C_TotCurWkHours” measures the total weekly hours the respondent worked at all of the jobs he/she listed).

For the NBS, the constructed variables fall into several categories, which are briefly described below. A list of constructed variable names and their description can be found in Appendix G.

1. Survey Administration

The first type of constructed variable includes survey administration and respondent descriptor variables. Included in this set of constructed variables are C_Rtype (indicating whether the interview was completed by the sample member or a proxy respondent), C_IntMode (CAPI or CATI interview), C_Resptype (indicating whether the interview was completed by the sample member only, the sample member with help, or a proxy only), and C_Intage (age at interview). In some cases, constructs were based on sampling variables, for example, C_PaymentType (EN payment type), and C_Cohort (sampling cohort). Other variables on the Restricted Access File identify longitudinal respondents: R2_r1long (Phase 1 Longitudinal Sample Member), and their response status at rounds 1 and 2 (R2_statusR1R2). These constructs are positioned at the beginning of the file, prior to the questionnaire sections.

2. Logical Zero

To reduce the number of legitimate missing responses originating from survey skip patterns, “logical zero” constructs were created for variables assessing the amount of income the sample member received from a variety of sources in the month prior to interview (based on K3, K7a-K7h, K12, and K15). These constructs included the amount earned from jobs last month (C_LstMnthPay), the amount received from private disability insurance (C_AmtPrivDis), worker’s compensation (C_AmtWorkComp), veteran’s benefits (C_AmtVetBen), public assistance (C_AmtPubAssis), unemployment (C_AmtUnemploy), private pension (C_AmtPrivPen), food stamps (C_AmtFoodStamp), other government programs (C_AmtOthGov), other sources on a regular basis (C_AmtOthReg), and from other sources on a nonregular basis (C_AmtOthNonReg). For example, if the respondent reported he or she did not receive private disability insurance last month (question K6a), the follow-up question asking how much private disability insurance was received (question K7a) was skipped. During data processing, such .L (logical skip) responses were recoded to \$0. Thus, if the sample member reported not receiving private disability insurance the previous month, then the value of C_AmtPrivDis was “\$0.” Logical zero constructed variables are identified in the codebook user notes.

3. Duration and Amount Standardization

Throughout the NBS questionnaire, respondents had the option of reporting contacts with providers, income, and expenditures in the unit of their choosing—for instance, daily, weekly, or monthly. The NBS questionnaire was designed with the expectation that allowing respondents to select the time frame (ideally, the time frame with which they were most comfortable) would improve data quality. In these situations, the amount and the unit reported by the respondent existed as two distinct variables in the survey data. For example, question C12amt asked for the

amount paid on a job and C12hop, how often the amount was paid. To aid the user, constructed variables were created to standardize the time frame, resulting in a single variable (for example, C_MainJobHrPay) in one unit. In section C and D both hourly pay (C_MainCurJobHrPay, C_MainJobHrPay2004) and monthly pay variables were created (C_MainCurJobMnthPay, C_MainCurJobMnthPayTH, C_MainJobMnthPay2004, C_MainJobMnthPayTH2004). Time to report one's current job to SSA was standardized to a week unit (C_MainCurJobRepSSA). Household income, as reported at L23Aamt and L23Ahop was standardized to an annual unit (C_HhInc2004). Variables in section G referencing cost of services (C_ServCost2004, C_TotSerCost2004), costs of equipment and personal assistance services (C_CurMnthEquipExp, C_CurMnthPASExp, and C_TotCurEquipPASExp), duration of visits with provider (C_DurProvVisit), number of contacts with provider (C_NumProvCont), and total money received from ENs (C_TotMoneyENS2004) were also created to standardize reporting units. The NBS codebook provides the specifications used to create these variables in the construct specification notes for each variable.

4. Pathing Combinations

Other constructs were created to combine or summarize survey responses when answers could be provided in multiple places. For example, respondents could report current Medicare coverage in J1 when explicitly probed for this type of insurance and also at J9 ("What kinds of health insurance coverage do you have?") if they reported having no current insurance at J1-J5. In this case, a construct was created that checked both J1 and J9 to determine if the respondent indicated Medicare coverage at either item (C_CurMedicare). This type of construct was created for all health insurance variables in section J. Similar constructs were created to flag awareness of the Ticket to Work program (C_AwareTTW), as well as age the sample member first became limited (C_DisAge and C_AdultChildOnset), ever worked for pay (C_EvrWorked), and worked

when limited (C_WrkdWhenLim). Similarly because G46 (family paid for services) was skipped if family was indicated as a source of payment in G45 (who paid for services from provider), constructs were created to identify sources of payments across these items (C_SelfFamPayServ-C_C_AgencyPayServ). The constructed variable code included in the codebooks provides the original questionnaire variables used to create each constructed variable.

Finally, several constructed variables were created in section G to summarize information across providers. In order to facilitate reporting of services received, respondents were asked to list the names of places where they received various types of services (employment, job training, medical services, mental health services, and schooling). For each provider mentioned, respondents were then asked whether they received services from this provider in 2004. To consolidate this information, constructs were created to flag whether each particular type of services was ever received (C_EvrUseEmploy, C_EvrUsedServ) and which specific services were received in 2004 across providers (C_PhyTh2004-C_JobCch2004). Additionally, constructs were created to flag whether services were ever received from particular types of providers (for example, C_EvrUseSVR) and whether those providers were used in 2004 (for example, C_UseSVR2004). The provider constructs created in section G are discussed in more detail below.

5. Scales

Constructed variables were also created to summarize items that were part of a pre-existing scale. This included creating a total SF-8TM physical and mental score (C_PCS8TOT, C_MCS8TOT), a score on the CAGE alcohol scale (C_CAGEAlcohol), and a drug dependence indicator (C_DrugDep). A body mass index (C_BMI) construct was also created based on height and weight.

6. Other

Additional constructs were created to simplify analysis of income data (by creating a poverty level construct), impairments (by creating a series of variables to identify the number of ADL, IADL, physical, emotional, and other impairment types), job information (by collapsing information across jobs), and information about Employment Networks and length of time in the TTW program (by summarizing across Employment Networks).

E. SSA ADMINISTRATIVE DATA

MPR received administrative data from SSA for the purposes of selecting the sample; contacting, locating, and verifying sample members; and to fill information or drive instrument pathing in the survey instrument. Personally identifying information received from SSA (for example, Social Security number, name, address, and telephone number) is not included on either the Restricted Use or Public Use data file. Key items that were used for the creation of sampling strata and those that were used to dictate pathing in the instrument are included. These variables begin with “OrgSampInfo” to indicate that they are original sample file variables.

Because SSA benefit amount received last month was not asked of respondents, this information was retrieved from SSA administrative variables and was incorporated into the monthly income variables, C_AmtOthReg and C_TotGovCashBen. Additionally, back payments received from SSA were included as other income received on a nonregular basis for the variable C_AmtOthNonReg.

Additional administrative variables from SSA records were appended to the Public Use File to enable more comprehensive data analysis. These data retain their original names and are included at the end of the file.

F. PUBLIC USE VARIABLES

Some data were edited to ensure the confidentiality of survey respondents for the Public Use File. Editing for the Public Use File involved excluding variables containing information that could potentially be used to directly or indirectly identify a sample member, and constructing new variables to mask extreme or rare values and populations. Using SSA's Office of Program Development and Research's (OPDR) Disclosure Checklist for the Public Release of Data, we developed encryption/masking algorithms that would maximize the analytic value of the data while maintaining acceptable confidentiality for the program participants.

1. Variable Exclusion

In order to minimize the likelihood of indirect identification of a sample member, variables that could identify residents of smaller geographic areas or sample members possessing rare attributes (outliers) were deleted. Particular attention was paid to variables showing fewer than 100 sample members with a given characteristic (small cell sizes). The file was also simplified by dropping variables with little analytic value. These included survey administration variables, source variables that had corresponding imputed versions, imputation flags, source variables that were summarized in a constructed variable, and constructed variables that had not yet been utilized in round 1 analyses. Data elements with quality problems that would reduce their analytic value were also dropped. SSA administrative data appended to the Restricted Access File were also dropped. In their place, select key administrative variables were masked and added to the file as new constructs. Appendix H provides a list of all variables dropped or replaced and the reason the variable was excluded. See Appendix A for a list of all variables included and dropped from the Public Use File.

2. Masking and the Construction of New Variables

The remaining variables were assessed for their confidentiality disclosure risk. When survey questions identified relatively rare populations, a new variable was constructed to combine small groups into larger groupings. For many variables that posed a potential risk, constructed variables summarizing the information already existed on the file. When constructed variables did not exist, MPR prepared masking algorithms that maximized their analytic value while maintaining acceptable confidentiality for the program participants. Masking algorithms included top and bottom coding of continuous variables, collapsing continuous variables into categories, and combining responses for categorical variables. These Public Use File constructs were assigned the same variable name as the source variable and end with a “PUB” to indicate that they were created for the Public Use File. These variables are also included on the Restricted Use File. A complete list of all variables edited for confidentiality with a brief description of the recode, can be found in Appendix I. Descriptions of the specific recodes and construct specifications for each variable can also be found in the codebook.

G. ADDITIONAL DETAILS ON SELECTED CONSTRUCTED VARIABLES

1. Jobs Held in 2004

In section C (Current Employment), job-related information was collected for each job held at the time of interview. In section D (Jobs/Other Jobs in 2004), information was collected for any other jobs held in 2004 not already reported in section C. Data for each job are represented on the Restricted Use data file with an `_n` indicating which job the data are in reference to (for example, `D6mth_1` indicating month started first job, `D4mth_2` indicating month started second job, and so on). In both sections, respondents were asked to report first on their main job, that is, the job at which they worked the most hours, and then to subsequently report on other jobs held. To reduce respondent burden, respondents were not asked to report on any jobs held during 2004

that had previously been mentioned in section C as current employment. Rather, employment data from section C were copied to section D items during data processing for all current jobs also held during the 2004 time period. See Table V.8 for a list of all job-specific items that were filled in with section C data. Items in section D that had no equivalent in section C (D8mtn, D8yr, D23) were coded as .L (indicating logical skip).

TABLE V.8
JOB VARIABLES IN SECTIONS C AND D

Variable in C	Variable in D	Variable Description
C2	D4	Occupation
C3	D5	Industry
C4mth, C4yr	D6mth, D6yr	Start month and year of job
No equivalent item	D8mth, D8yr	Stop month and year of job
C6	D14	Self-employed status
C7	D15	Sheltered workshop status
C8	D16	Hours usually worked per week
C9	D17	Weeks usually worked per year
C10	D18	Paid by the hour
C11	D19	Hourly pay
C12amt, C12hop	D20amt, D20hop,	Amount of pre-tax pay
C13amt, C13hop	D21amt, D21hop	Amount of post-tax pay
No equivalent item	D23_1 thru D23_22	Reasons for stopping work

Source: NBS, round 2.

a. Including Current Jobs Held in 2004 in Section D

Jobs mentioned in section C were defined as held in 2004 if C4yr (year started current job) was earlier than or equal to 2004 and the job held in 2004 had been held for longer than one month. Each applicable job from section C was copied into the first blank job slot in section D (for example into D6mth_2 if D6mth_1 already contained data and into D6mth_3 if both D6mth_1 and D6mth_2 already contained data). The variables C_job_from_SecC_1 through C_job_from_SecC_4 are included on the Restricted Access data file to indicate which jobs from section C (by job number) were copied into specific section D job slots.

b. Determining the Main Job Held in 2004

In addition to copying job data from section C to the section D items, it was necessary to determine which job held in 2004 was the main job. Prior to including the jobs from section C, the main job held in 2004 was stored as job 1. Since it was possible that a job reported in section C was the respondent's main job in 2004, hours worked in 2004 on each job were compared with the first job mentioned in section D once the jobs from section C were incorporated. The job with the greatest number of hours per year (numbers of hours per week multiplied by the number of weeks per year), was considered the main 2004 job.²¹ The variable Main_Job_grid_num identifies the job number of the main job held in 2004 after this analysis.

²¹ If hours per year could not be calculated due to missing data on either number of hours per week or number of weeks per year, it was coded as missing. If hours per year was missing for all 2004 section C jobs, job 1 in section D was counted as the main job in 2004. If there were no jobs listed in section D, and hours per year was missing for all 2004 jobs in section C, the first job listed in C that was a 2004 job was counted as the main job in 2004. If hours per year was missing for job 1 in section D, the section C job with most hours per year was counted as the main 2004 job.

If there was no 2004 job from section C, or hours per year was missing for all section C 2004 jobs, job 1 in section D was counted as the main 2004 Job. If hours per year was missing for all 2004 section C jobs and job 1 in section D, job 1 in section D was counted as the main job in 2004.

This was used to create a series of variables ending with `_m` representing each job specific item listed in Table III.5 for the main job held in 2004 (for example `D6mth_m` and `D6yr_m`). It is important to note that information related to the main job was not deleted from the `job_1-job_5` variables when this was done. For example, for a case in which three jobs are listed in section D (after copying relevant jobs from section C) and the second job is determined to be the main job, information related to hours worked on this job will be found in both `C8_m` and in `C_8_2`. Therefore, `_m` jobs should not be counted as additional jobs. On the public use version of the file, only the main job variables (`_m`) are provided for jobs held in 2004.

For the purposes of the constructed variables created in this section, separate constructs were created for each job mentioned (job 1, job 2, and so on). Additional constructs were created for the “main” job (`C_MainJob2004SOC`, `C_MainJob2004NAICS`, `C_MainJobHrPay2004`, `C_MainJobMnthPay2004`, `C_MainJobMnthPayTH2004`, and `C_MnthsMain2004Job`) as identified by the variable `Main_Job_grid_num`. As stated above, information in the main job constructs is replicated in one of the other job slots on the restricted file and does not represent an additional job.

2. Service Providers

In section G, respondents were asked to discuss employment-related services and supports they received in 2004. To aid in the recall of employment-related services received in 2004, respondents were first asked if they had ever received employment services, job training, medical services, or counseling to improve their ability to work or live independently. For each type of service, respondents were asked to list up to eight providers or places where the service was received (at G2, G11, G16, and G20). Provider type was then collected for each provider mentioned. To minimize respondent burden by avoiding the need to ask provider type again if a provider was listed under two or more services, interviewers could indicate that a provider had

already been mentioned, thus skipping the provider type follow-up questions. Once a list of providers ever used was obtained, respondents were asked when they last received services from each provider. Follow-up questions regarding specific services received, number of visits, duration of visits, cost of services, and usefulness of services received in 2004 were asked for each provider from whom services were received in 2004.

Data for each specific provider mentioned were stored in a grid using the convention `_n` (1-34) to indicate which provider the data were associated with. Providers mentioned under G2 (employment services received) were stored in slots `_1-10`; providers mentioned under G11 (job training) were stored in slots `_11-18`; providers mentioned under G16 (medical services) were stored in slots `_19-26`; and providers mentioned under G20 (therapy or counseling) were stored in slots `_27-34`. This convention was maintained throughout the section so that data associated with the second provider listed under G2 (`_2`) are always found in the `_2` variables (for example `G33_2`) and data associated with the second provider listed under G11 (`_12`) are found in the 12 variables (for example `G33_12`).

To simplify this section for the purposes of analyses, a series of constructed variables were created. To start, each provider was assigned a provider type code (`C_ProvType2005_1-34`) indicating the type of provider services were received from (see the NBS codebook for detailed construct specifications). Constructs were also created to identify services received from each provider (for example `C_PhyTh2005_1-34`, `C_OccTh2005_1-34`, and so on), the duration of the visit with each provider (`C_DurProvVisit_1- C_DurProvVisit_34`), the number of contacts with each provider (`C_NumProvCont_1- C_NumProvCont_34`), and the usefulness of services received from each provider (`C_ProvUse2004_1- C_ProvUse2004_34`). Variables were then created to classify providers by type so that a list of providers and services received by provider type could be developed. For example, if the first provider mentioned was a state vocational

rehabilitation agency (SVRA), this provider was considered the first SVRA provider (C_Provtype2004_01_1) with _01 indicating provider type 1 (SVRA) and _1 indicating first provider of this type mentioned. If the second provider was a mental health provider, this provider was considered the first mental health provider (C_Provtype2004_03_1). If the third provider was another SVRA, this provider was considered to be the second SVRA provider (C_Provtype2004_01_2). These variables were then linked to data pertaining to specific services received, payment of services, and duration and usefulness of visits mentioned above (for example C_Phyth2004_01_1 indicating that physical therapy was received by the first SVRA provider). Provider types were classified as shown in Table V.9.

TABLE V.9
 NUMERIC VALUES ASSOCIATED WITH PROVIDER TYPES

Provider Type	Description
1	SVRA
2	Welfare Agency
3	Mental Health Agency
4	Other State Agency
5	Private Business
6	Other Non-State Agency
7	School
8	Unemployment Office
9	Unknown Employment/Training
10	Clinic/Hospital/MD
11	Rehabilitation Treatment Center
12	Other Medical/Mental Health Provider
13	Unknown Medical/Mental Health Provider

Source: NBS, round 2.

Additional constructs were created that summarized provider types across services, for example C_EvrUseSVR, (indicating that the sample member ever used an SVRA), and

C_UseSVR2004, (indicating that an SVRA was used in 2004); and specific services received across providers, for example C_PHYTH2004 (received physical therapy in 2004), C_OCCTHER2004 (received occupational therapy in 2004), and so on.

For the Public Use File, the source variables and intermediary constructs related to the data collection grid (_1-_34) are not provided. Due to small cell sizes, welfare agency (type=2), other non-state agency (type=6), and unemployment office providers (type=8) were combined with provider type other state agency (type=4). Provider type=9 (unknown employment provider) and type=13 (unknown medical provider) were dropped. For the Public Use File, second and third providers for many provider types were dropped due to small cell sizes.

H. ITEMS SKIPPED FOR LONGITUDINAL RESPONDENTS

Several items in the round 2 survey were not asked of longitudinal respondents who had completed the prior round. These items were skipped because they were no longer relevant, because answers should be stable across time (for example race), or because the information obtained would overlap with previous responses. In most cases, these items were coded as .N (not applicable) if cases would otherwise be eligible to receive the item. Where answers should be stable over time, these items were logically imputed with respondents' answers at round 1 to simplify analyses (age and year first became limited, limited before age 18, worked for pay when limited, job when first limited required computer use, ethnicity, race, and education of parents). Table V.10 provides a summary of items that were not asked of longitudinal respondents who completed round 1 and describes how each item was coded at round 2 for these cases. It should be noted that although the data file does not include a flag indicating which cases are coded using round 1 data, analysts can use the variable R2_statusR1R2 (response status-round 1 and round 2) to determine which cases are coded with round 1 data for longitudinal participants on a given item (R2_statusR1R2=2). Constructed variables such as C_disage, C_evrworked, and

C_adultChild_Onset incorporate these edits. Appendix C provides the rationale for why each item was not asked for longitudinal cases.

TABLE V.10

ITEMS SKIPPED FOR LONGITUDINAL RESPONDENTS WHO COMPLETED ROUND 1

Variable	Variable Label	Description of Coding
B9	Received benefits in last 5 years	Coded as .N if R2_statusR1R2=2 and B5=0
B11	Still have conditions that made eligible	Coded as .N if R2_statusR1R2 =2 and B5=0 and B9=1
B13	Previously eligible for other reasons	Coded as .N if R2_statusR1R2 =2 and B5=0 and B9=1 and B11=1
B18_age	Age first became limited	If R2_statusR1R2 =2, populated with round 1 data
B18_year	Year first became limited	If R2_statusR1R2=2, populated with round 1 data
B19	Limited before 18	If R2_statusR1R2=2, populated with round 1 data
B22	Working for pay when first limited	If R2_statusR1R2=2, populated with round 1 data
B23	Job when first limited required computer use	If R2_statusR1R2=2, populated with round 1 data
E3	Ever heard of PASS	Coded as .N if (bstatus=1 or bstatus=3) and R2_statusR1R2=2 and FIXE2=00 and E3 = (.) and E5 = (.) and E7 = (.) and E9 in (.)
E5	Ever heard of earned income exclusion	Coded as .N if (bstatus=1 or bstatus=3) and R2_statusR1R2=2 and FIXE2=00 and E3 = (.) and E5 = (.) and E7 = (.) and E9 in (.)
E7	Ever heard of PESS	Coded as .N if (bstatus=1 or bstatus=3) and R2_statusR1R2=2 and FIXE2=00 and E3 = (.) and E5 = (.) and E7 = (.) and E9 = (.)
E9	Ever heard of Continued Medicaid Eligibility	Coded as .N if (bstatus=1 or bstatus=3) and R2_statusR1R2=2 and FIXE2=00 and E3 = (.) and E5 = (.) and E7 = (.) and E9 = (.)
E12	Ever heard of student earned-income exclusion	Coded as .N if (Orgsampinfo_bstatus=1 or 3) and orgsampinfo_age is <=25 and SSIAGE<=22 and R2_statusR1R2=2 and FIXE2=00 and E12 = (.)
E15, E17	Ever heard of Trial Work Period	Coded as .N if (bstatus=2 or bstatus=3) and R2_statusR1R2=2 and FIXE14=00 and E15 = (.) and E17 = (.)

TABLE V.10 (continued)

Variable	Variable Label	Description of Coding
E17	Ever heard of Extended Period of Eligibility for Medicare	Coded as .N if (bstatus=2 or bstatus=3) and R2_statusR1R2=2 and FIXE14=00 and E15 = (.) and E17 = (.) .
E19, E20a, E20c	Ever heard of Impairment-Related Work Expenses	Coded as .N if R2_statusR1R2=2 and E19 = (.) and E20a = (.) and E20c = (.) .
E20a	Ever heard of Expedited Reinstatement	Coded as .N if R2_statusR1R2=2 and E19 = (.) and E20a = (.) and E20c = (.) .
E20c	Ever heard of BPAOs	Coded as .N if R2_statusR1R2=2 and E19 = (.) and E20a = (.) and E20c = (.) .
E26	Year heard about TTW	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E27	Received info in the mail about TTW	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E28_1-_10	Who sent TTW info	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E29	Someone called about TTW	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E30_1-_10	Who called about TTW	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E31	Someone talked to about TTW	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E32_1-_10	Who talked to about TTW	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E33	Learned about TTW on website	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E34	Got Ticket in mail	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E35	Tried to get Ticket	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1).
E36	Ever used ticket	Coded as .N if R2_statusR1R2=2 and (E21=1 or E24=1 or E25=1) and (E34=1 or E35=1).
E48	Ever used Ticket with any other EN	Coded as .N if R2_statusR1R2=2 and E37a ne 1 and E41_1-E41_4 ne 1 and E21=1 or E24=1 or E25=1.
E49	Number ENs ever signed up with	Coded as .N if R2_statusR1R2=2, and E37a ne 1 and E41_1-E41_4 ne 1 and E21=1 or E24=1 or E25=1.
E50mth	Month first used Ticket with other EN	Coded as .N if R2_statusR1R2=2 and E37a ne 1 and E41_1-E41_4 ne 1 and E21=1 or E24=1 or E25=1.
E50yr	Year first used Ticket with other EN	Coded as .N if R2_statusR1R2=2 and E37a ne 1 and E41_1-E41_4 ne 1 and E21=1 or E24=1 or E25=1.

TABLE V.10 (continued)

Variable	Variable Label	Description of Coding
L1	Ethnicity	If R2_statusR1R2=2, then field populated with R1 data. If R1_final=19 or R1_final=29, then field populated with .D.
L2	Race	If R2_statusR1R2=2, then field populated with R1 data. If R1_final=19 or R1_final=29, then field populated with .D.
L4	Highest grade mother completed	If R2_statusR1R2=2, then field populated with R1 data. If R1_final=19 or R1_final=29, then field populated with .D.
L5	Highest grade father completed	If R2_statusR1R2=2, then field populated with R1 data. If R1_final=19 or R1_final=29, then field populated with .D.

Source: NBS, round 2.

In addition, to minimize the possibility that longitudinal respondents could be identified on the data file by their missing responses, public use variables were created to mask awareness of SSA work incentive programs (section E) that were skipped by longitudinal respondents. These items were logically imputed based on responses to items at round 1 and to other items asked at round 2. As for other Public Use File variables, the new constructs are assigned the same variable name as the source variable and end with an “_PUB” to indicate that they were created for the Public Use File.

VI. SAMPLING WEIGHTS

The final analysis weights for the Representative Beneficiary Sample and the Ticket Participant Sample were determined via a four-step process: (1) calculate the initial weights, (2) adjust weights for two phases of nonresponse (location and completion), (3) trim the weights to reduce the variance, and (4) poststratification. This chapter describes these computations for both the Representative Beneficiary Sample and the Ticket Participant Sample. Section A summarizes the procedures used to compute and adjust the sampling weights, the procedure for creating composite weights. (Composite weights were used in both round 1 and round 2 to combine the Representative Beneficiary Sample and Ticket Participant Sample, and to combine two samples in the Ticket Participant Sample.) Procedures for computing the weights for the Representative Beneficiary Sample are described in detail in Section B. Section C covers the same information for the Ticket Participant Sample. Section D explains the procedures for variance estimation.

A. COMPUTING AND ADJUSTING THE SAMPLING WEIGHTS: A SUMMARY

1. Representative Beneficiary Sample

The sampling weights for any survey are computed from the inverse selection probability that incorporates the stages of sampling in the survey. The Representative Beneficiary Sample was selected in two stages: primary sampling units (PSUs) were selected as part of the round 1 sampling activities, and the individuals within the PSUs were selected from a current database of

beneficiaries.²² We used four age-based strata in each PSU. Because we used a composite size measure to select the PSUs, we can achieve equal probability samples in the age strata and nearly equal workload in each PSU for the Representative Beneficiary Sample.²³

For the initial beneficiary sample, we selected more individuals than we expected to need, to account for differential response and eligibility rates in both the PSUs and the sampling strata. This “augmented” sample was randomly partitioned into subsamples (called waves), where only some of the waves were used to form the actual final sample. We released an initial set of waves and then monitored data collection to identify which PSUs and strata required additional sample members. After the sample members in the initial waves were released for the final sample, we were able to limit the number of additional sample members (in subsequent released waves) to only those PSUs and strata requiring them, and were thus able to achieve achieved sample sizes that were close to our targets. Controlling the release of the sample also allowed us to control the balance between data collection costs and response rates. The initial sampling weights were computed on the basis of the inverse of the selection probability for the augmented sample. Naturally, only a subset of the augmented sample was actually released, so these initial weights were adjusted for the actual sample size. The release-adjusted weights were post-stratified to population totals obtained from SSA.²⁴

²² An intermediate stage of sampling of secondary sampling units (SSUs) was used in two PSUs, but for the sake of simplicity, these are generally treated as equivalent to PSUs in this description. All PSUs and SSUs were selected during the round 1 sampling activities.

²³ The composite size measure was computed from the sum of the products of the sampling fraction for a stratum and the estimated count of beneficiaries in that stratum and PSU (Folsom et al. 1987).

²⁴ These totals were obtained from a frame file provided by SSA that contains basic demographics for all SSI and SSDI beneficiaries.

We used logistic regression methods to estimate response propensities. This was done in two stages: (1) estimating a propensity score for locating a sample member and (2) estimating a propensity score for response among located sample members. In our experience with this survey, factors associated with the inability to locate a person tend to be different from factors associated with cooperation. The unlocated person cannot deliberately avoid or otherwise refuse to cooperate. For instance, that person may have chosen not to list his or her number or may frequently move from one address to another, but he or she has not specifically shown an unwillingness to cooperate with the survey itself. Located nonrespondents may deliberately avoid the interviewer or may be expressing displeasure or hostility toward surveys in general or toward SSA in particular.

To develop the logistic propensity models for round 2, we used information from the SSA data files and geographic information (such as urban/rural or region) as covariates. Using a liberal level of statistical significance (0.3) in forward and backward stepwise regression models, we made an initial attempt to reduce the pool of covariates and interactions. We used a higher significance level because the purpose of the model was to improve the estimation of the propensity score, not to identify statistically significant factors related to response. In addition, the information sometimes reflected proxy variables for some underlying variable that was both unknown and unmeasured. Any covariate or interaction that was clearly unrelated to locating the respondent or to response propensity was excluded from the pool.

The next step was to carefully evaluate a series of models by comparing the following measures of predictive ability and goodness of fit: the R-squared statistic,²⁵ Akaike's

²⁵ The Generalized Coefficient of Determination (Cox and Snell 1989) is a measure of the adequacy of the model, where higher numbers indicate a greater difference between the likelihood of the model in question and the null model likelihood. The "Max rescaled R-Square" scales this value to have a maximum of 1.

Information Criterion (AIC),²⁶ percentage concordant and discordant,²⁷ and the Hosmer-Lemeshow goodness-of-fit test.²⁸ Model-fitting also involved reviewing the statistical significance of the coefficients of the covariates in the model and avoiding any unusually large adjustment factors. In addition, we also avoided data warnings in SUDAAN.²⁹ We then used the specific covariate values for each located person (cooperating person) to estimate a propensity to be located (to cooperate), from which we calculated the adjusted weights. The location-adjusted weight is the product of the released adjusted weight and the inverse of the location propensity score; the nonresponse-adjusted weight is the product of the location-adjusted weight and the inverse of the cooperation propensity score.

Once the adjustments were made, we trimmed the survey weights (if necessary) to avoid unusually large weights, which would make the survey estimates less precise. We used the design effect attributable to the variation in the sampling weights as a statistical measure to determine both the necessity and the amount of trimming. The design effect attributable to weighting is a measure of the potential loss in precision caused by the variation in the sampling weights relative to a sample of the same size with equal weights. We also wanted to minimize

²⁶ Akaike's Information Criterion is defined as $AIC = -2\text{LogL} + 2(k+s)$, where LogL is the loglikelihood of the binomial distribution using the parameters from the given model, k is the total number of response levels minus one, and s is the number of explanatory effects (Akaike, 1974). AIC is a relative number, and has no meaning on its own. For a given model, smaller values of AIC are better than larger values.

²⁷ A pair of observations is concordant if a responding subject has a higher predicted value than the nonresponding subject, discordant if not, and tied if both members of the pair are either respondents, nonrespondents, or have the same predicted values. It is desirable to have as many concordant pairs and as few discordant pairs as is possible (Agresti 1996).

²⁸ The Hosmer-Lemeshow Goodness-of-Fit Test, unlike the Pearson and deviance goodness-of-fit tests, can be used to test goodness of fit even when some of the covariates are continuous (Hosmer and Lemeshow 1989).

²⁹ SUDAAN data warnings usually included one or more of the following: (1) an indication of a response cell with zero count; (2) one or more parameters approaching infinity (which may not be readily observable with the parameter estimates themselves); and (3) degrees of freedom for overall contrast less than the maximum number of estimable parameters. We tried to avoid all of these warnings, though avoiding the first two were of the highest priority. These warnings were almost always caused by a response cell with a count that was too small, which required dropping covariates or collapsing categories in covariates.

the extent of trimming to avoid the potential for bias in the survey estimates. For the Representative Beneficiary Sample, no weights were trimmed.

The final step is a series of post-stratification adjustments through which the weights sum to known totals obtained from SSA on various dimensions (specifically, gender, age grouping, and for beneficiaries only, recipient status³⁰). After post-stratification, we checked the survey weights again to determine whether more trimming was necessary. In round 2, trimming was not necessary either before or after post-stratification in the Representative Beneficiary Sample.

2. Ticket Participant Samples

The initial sampling weights for the Ticket Participant Samples were computed on the basis of the inverse of the selection probability for the participant. As in the Representative Beneficiary Sample, we used the PSUs as the primary source of the sample members and, when possible, selected an initial larger (augmented) sample. For participants using either the milestone-outcome or the outcome-only payment system, the PSUs in the initial sampling design did not have enough participants to support analysis tasks—even with all participants in the PSUs from these two payment types selected for the sample. As a result, it was necessary to supplement the sample from the PSUs with a second independent sample of Ticket participants from two geographic strata defined by the PSUs. The sample members within the initial sample design are referred to as the clustered sample, and the secondary sample, which was randomly

³⁰ Disability payments were made in the form of Supplemental Security Income (SSI), Social Security Disability Insurance (SSDI), or both.

selected from the entire population of milestone-outcome and outcome-only participants in two geographic strata (in the PSUs and not in the PSUs) are referred to as the unclustered sample.³¹

As in the Representative Beneficiary Sample, we computed the weights for the augmented sample and then adjusted them for the number of sample members that were in the final sample.³² We adjusted for nonresponse separately for locating sample members, and then for response among the located sample members. Using the general techniques that we applied in the Representative Beneficiary Sample, we fitted logistic propensity models to obtain the weight adjustments. The size of the sample for the three payment types was similar, but the size of the population for each was very different. Hence, the sampling weights differed substantially in magnitude from one payment system to the next. As a result, we conducted the weight adjustments separately for each payment type. For the subsamples associated with each phase and payment type within the Ticket Participant Sample, we trimmed the weights to ensure that the design effect due to unequal weighting was not substantially greater than 3.0 (less than 3.0 if possible). The final adjustment for the participants' weights was a post-stratification adjustment to the counts of participants within subgroups defined by age and gender in the sampling frame. After post-stratification, we checked the survey again to determine whether more trimming was necessary. In round 2, although trimming was required before post-stratification in the Ticket Participant Sample, no trimming was required after post-stratification.

³¹ Because of the small populations for the Outcome Only and Milestone and Outcome payment types, Ticket participants who resided in the selected PSUs for these payment types were often selected for both the clustered and the in-PSU strata of the unclustered samples. Hence, these duplicate cases had to be accounted for in the weighting process, as is discussed later.

³² For the clustered sample of participants using the Outcomes-Only payment system, all participants in the PSUs were selected and were released for data collection.

3. Composite Weights

Although the Ticket participant population constitutes a small subset of the beneficiary population, some analyses require a sample with enough individuals both within and outside the Ticket participant population. This can be accomplished by combining the Ticket Participant Sample and Representative Beneficiary Sample and using composite weights to account for the fact that the samples have been combined. When conducting analyses representing the beneficiary population, these weights can be used to make estimates about participants within the beneficiary population. (Analyses limited to the participants subpopulation use weights only from the Ticket Participant Sample.)

In round 1, we used a sophisticated procedure to create these weights such that the variance of survey estimates was minimized. This procedure allowed for weights to be applied to observations that were duplicated across the two samples.³³ However, because the Ticket participants were such a small fraction of the beneficiary sample frame, we used a simpler alternative method at round 2.

The Representative Beneficiary Sample included few Ticket participants with completed interviews (or who were ineligible after the sample was selected): 48 of the 61 Ticket participants in the sample had completed interviews or were ineligible after sample selection in round 2, including 29 from Phase 1 states and 19 from Phase 2 states. We therefore assigned a value of zero to the original Representative Beneficiary Sample weights among these 48 cases. To ensure that the Ticket participant population would be represented, we replaced these members of the Representative Beneficiary Sample by the 3,156 members of the Ticket

³³ A complex procedure was also used to combine the clustered and unclustered samples of the Ticket Participant Sample in both round 1 and round 2. This procedure is described in Section C of this chapter.

Participant Sample (2,149 from Phase 1 states and 1,005 from Phase 2 states) with completed interviews (or ineligible dispositions after sample selection).³⁴ The total sum of weights added up to the total number of Ticket participants (34,312 for Phase 1 states and 21,196 for Phase 2 states). Since the 48 Ticket participants in the Representative Beneficiary Sample did not have weights summing to the appropriate marginal totals for each phase, it was necessary to ratio-adjust the remaining beneficiary weights to the appropriate totals.

4. Quality Assurance

To ensure that the methods used to compute the weights at each step were sound, a senior statistician conducted a final quality assurance check of the weights from both the Representative Beneficiary and Ticket Participant samples, as well as the composite weights. We chose a statistician who was not directly involved in the project for the sake of objectivity.

B. REPRESENTATIVE BENEFICIARY SAMPLE

1. Initial Weights

The initial weights were computed using the inverse of the probability of selection. For the Representative Beneficiary Sample, samples were selected independently in each of four age strata in each geographic unit or PSU.³⁵ The number of sample members selected in each stratum and PSU for the augmented sample was determined by allocating three times the target sample size across the 84 geographic units (PSUs and secondary sampling units) independently for each

³⁴ This does not include sample members who were selected for the round 1 Ticket participant sample, were no longer Ticket participants in round 2, but were sampled anyway for longitudinal purposes.

³⁵ The sample of PSUs contained 79 unique selections. Because of the size of its beneficiary population, the PSU representing Los Angeles County (LA) received two selections. Within the LA PSU, secondary sampling units (SSUs) were formed and four SSUs were selected. In the PSU representing Cook County, IL, (Chicago) SSUs were also formed to decrease travel costs, and two SSUs were selected. These six SSUs and the other 77 PSUs (83 units) are treated as PSUs for the beneficiary sample.

stratum.³⁶ This ensured that plenty of reserve sample units were available in case response or eligibility rates were lower than expected. The augmented sample size for the three younger age strata (18 to 29 years, 30 to 39 years, and 40 to 49 years) was 3,999 sample the members (three times the target sample size of 1,333); for beneficiaries 50 to 64 years, the 14,400 sample members were calculated by taking the inverse of the global sampling rate (F_j) for each stratum. The global sampling rates and initial weights are given in Table VI.1.

TABLE VI.1

SURVEY POPULATION AS OF JUNE 30, 2003, INITIAL SAMPLE SIZES AND INITIAL WEIGHTS BY SAMPLING STRATA IN THE NATIONAL BENEFICIARY SURVEY

Sampling Strata (ages as of June 30, 2004)	Survey Population ^a	Augmented Sample Size	Global Sampling Rate (F_j)	Initial Sample Weights	Released Sample
Total	10,005,908	14,400			6,712
Beneficiaries between 18 and 29 years old	1,012,037	3,999	0.003951	253.1	1,891
Beneficiaries between 30 and 39 years old	1,281,996	3,999	0.003119	320.6	1,837
Beneficiaries between 40 and 49 years old	2,461,591	3,999	0.001625	615.6	1,858
Beneficiaries between 50 and 64 years old	5,250,284	2,403	0.000458	2184.9	1,126

^aThe survey population represents all Supplemental Security Income (SSI) and Social Security Disability Insurance (SSDI) beneficiaries.

As described previously, the full sample was randomly partitioned into subsamples called waves that mirrored the characteristics of the full sample. The waves were formed in each of the four sampling strata in the 84 geographic units (a total of 336 combinations of PSU and sampling strata). At the start of data collection, a preliminary sample was assigned to the data collection

³⁶ An augmented sample that was three times as large as needed was selected to allow for adequate supplemental sample in all PSUs and sampling strata within the PSUs and to account for expected variation in the response and eligibility rates across PSUs and sampling strata.

effort and additional waves of sample were assigned as needed, based on experience with eligibility and response rates. Within the 336 combinations of PSU and sampling strata, the initial weights were adjusted to account for the number of waves assigned to data collection. The final sample size for the Representative Beneficiary Sample was 6,712 beneficiaries, as shown under “Released Sample” in Table VI.1.

2. Nonresponse Adjustments

In essentially all surveys, the sampling weights must be adjusted to compensate for sample members that cannot be located or who, once located, refuse to respond. First, weighted logistic regression models were fitted where the binary response was whether the sample member could be located. Using variables obtained from SSA databases, a pool of covariates from which to choose a final location model was selected through stepwise regression. This pool included both main effects and interactions. From this pool of covariates, candidate models were compared using various measures of goodness of fit and predictive ability, while avoiding large adjustments. This process was repeated for interview respondents among the located sample members, where another weighted logistic regression model was fitted. The two levels in the binary response for this model were “respondent” versus “nonrespondent.” For the Representative Beneficiary Sample, a sample member was classified as a respondent if the sample member or person responding for the sample member completed the interview (that is, an eligible respondent) or if the sample member was determined to be ineligible after sample selection (that is, an ineligible respondent). Ineligible sample members included persons who were never SSA beneficiaries, were in the military service at the time of the survey, were incarcerated, had moved outside of the United States, or were deceased at the time of the survey.

Using the procedures outlined above, the main factors or attributes affecting our ability to locate and interview the sample member included the personal characteristics of the sample

member (race, ethnicity, gender, and age), the type of beneficiary (recipient of SSI, SSDI, or both), identity of the payee with respect to the beneficiary, whether the beneficiary and the applicant for benefits lived in the same location, the number of times the beneficiary moved in the past five years (based on information from the SSA “finder” database), number of changes in the beneficiary’s phone number over the past five years, primary disability classification, type of disability claim (a person with a disability, a survivor, or other), living situation of beneficiary, source of data for address characteristics, whether the beneficiary was institutionalized, and geographic characteristics.

a. Coding of Survey Dispositions

The status of each sample member was maintained in the MPR Survey Management System during the survey and a final status code was assigned after the completion of all locating and interviewing efforts on a given sample member or at the end of data collection. For the nonresponse adjustments, we classified the final status codes into four categories:

1. Eligible respondents.
2. Ineligible respondents (sample members who were ineligible after sample selection, including deceased, sample members in the military or incarcerated, sample members living outside of the United States, and other ineligible).
3. Located nonrespondents (including active or passive refusals, language barrier situations, and so on).
4. Unlocated sample members (sample members who could not be located either using central office tracing procedures or in-field searches).

This classification of the final status code allowed us to measure the overall response rate, the completion rate among located sample members, and the location rate among all sample members.³⁷

b. Response Rates

The 78.7 percent response rate for the Representative Beneficiary Sample that is quoted in the introduction to this document is the **weighted overall completion rate**, given in the first line of Table VI.2. This response rate is the weighted count of sample members for whom a completed interview was obtained or who were determined to be ineligible, divided by the weighted sample count of all sample members. It can be determined by taking the product of the weighted location rate and the weighted cooperation rate, also known as the weighted completion rate among located sample members.

³⁷ Disposition codes 420 (institutionalized) and 430 (unavailable during field period) were classified as nonrespondent codes in round 2, even though they were considered ineligible codes in round 1. This affected 8 cases in the round 2 beneficiary sample. As a result, the nonresponse adjusted weight for these 8 cases was 0 in round 2, even though a similar response in round 1 would have resulted in a positive weight. Because of the small numbers, the effect on response rates is very small.

TABLE VI.2

WEIGHTED LOCATION AND WEIGHTED RESPONSE RATES FOR REPRESENTATIVE BENEFICIARY SAMPLE BY SELECTED CHARACTERISTICS

	Sample	Located Sample	Response Among Located Sample		Overall Respondents

Source: NBS, round 2.

The **weighted location rate** is the ratio of the weighted sample count for located sample members to the weighted count of all sample members, given in Table VI.2 as 93.0 percent. The **weighted cooperation rate** (the weighted completion rate among located sample members), 84.6 percent in Table VI.2, is the weighted count of sample members for whom a completed interview was obtained or who were determined to be ineligible, divided by the weighted sample count of all located sample members.³⁸ Weighted cooperation rates reflect the common survey situation that once a person is located, repeated contact efforts often will result in a completed interview.

³⁸ This response rate is the weighted count of sample members for whom a completed interview was obtained or who were determined to be ineligible divided by the weighted sample count of all sample members (# of completed interviews + # partially completed + # of ineligibles) / # of cases in the sample). It can be determined by taking the product of the weighted location rate and the weighted cooperation rate, also known as the weighted completion rate among located sample members. This response rate is basically equivalent to the AAPOR standard response rate calculation: $RR_{AAPOR} = \# \text{ of completed interviews} / (\# \text{ of cases in the sample} - \text{estimated } \# \text{ of ineligible cases})$. Ineligible cases are included in the numerator for two reasons: 1) the cases classified as ineligible are part of the original sampling frame (and hence the study population). We obtained complete information to fully classify these cases (i.e., their responses to the eligibility questions in the questionnaire are complete) and therefore classify them as respondents; 2) incorporating the ineligibles in the numerator and denominator of the response rate is essentially equivalent to the definition of a response rate with these cases excluded if the persons with an additional estimation of the number of eligible cases among those with eligibility unknown. By including the ineligible cases in the numerator and denominator, we avoid using this estimation stage and the response rate computation is more clearly explicated.

The weighted rates are used because (1) the sampling rates (therefore the sampling weights) vary substantially across the sampling strata as seen in Table VI.1, and (2) the weighted rates better reflect the potential for nonresponse bias. The weighted rates represent the percentage of the full survey population for which we were able to obtain information sufficient either to use in the data analysis or to determine as ineligible for the analysis.

c. Factors Related to Location and Response

In addition to overall response rate information, Table VI.2 also provides information for selected factors associated with locating a sample member, and factors associated with response among located sample members. The table includes the unweighted counts of all sample members, counts of located sample members, and counts of sample members for whom a completed interview was obtained or who were determined to be ineligible. The table also includes the weighted location rate, the weighted completion rate among the located sample members, and the weighted overall completion rate for these factors, which helped inform the decision about the final set of variables used in the nonresponse adjustment models.

d. Propensity Models for Weight Adjustments

A commonly used method to compute weight adjustments is to form classes of sample members with similar characteristics and to use the inverse of the class response rate as the adjustment factor in that class. The adjusted weight is the product of the sampling weight and the adjustment factor. The “weighting classes” are formed to ensure sufficient counts in each class to make the adjustment more stable (that is to have a smaller variance). The natural extension to the weighting class procedure is to use logistic regression with the weighting class definitions used as covariates, provided each level of the model covariates has a sufficient number of sample members to ensure a stable adjustment. The logistic regression approach also has the ability to include both continuous and categorical variables, and standard statistical tests are available to

evaluate the selection of variables for the model. For the location and the cooperation weight adjustments, we used logistic models to estimate the propensity for a sample member to be located and to cooperate. The inverse of the propensity score was used as the adjustment factor. The adjusted weight for each sample case is the product of the initial sampling weight and the adjustment factor.

The models were developed using the main effects described previously, plus selected interactions. To identify candidate interactions among these variables for the modeling, we first ran a chi-squared automatic interaction detector (CHAID) analysis in SPSS to find possible significant interactions. CHAID is normally attributed to Kass (1980) and Biggs et al. (1991), and its application in SPSS is described in Magidson (1993). The CHAID procedure iteratively segments a data set into mutually exclusive subgroups that share similar characteristics based on their effect on nominal or ordinal dependent variables. It automatically checks all variables in the data set and creates a hierarchy that shows all statistically significant subgroups. The algorithm finds splits in the population, which are as different as possible based on a chi-square statistic. It is a forward stepwise procedure; it finds the most diverse subgrouping, and then each of these subgroups is further split into more diverse sub-subgroups. Sample size limitations are set to avoid generating cells with small counts. It stops when splits no longer are significant; that is, that group is homogeneous with respect to variables not yet used or when the cells contain too few cases. The CHAID procedure results in a tree that identifies the set of variables and interactions among the variables that have an association with the ability to locate a sample member (and the propensity of a located sample member to either respond or be ineligible). CHAID was first run with all covariates, then rerun a few times with the top variable in the tree removed, to ensure all potentially important interactions were retained for further consideration. The resulting pool of covariates was further reduced by evaluating tabulations of all the main effects and the interactions identified by CHAID. At a particular level of a given covariate or

interaction, if all respondents were either located or unlocated (for the location models), complete or not complete (for the cooperation models), or the total number of sample members at that level was fewer than 20, then levels were collapsed if collapsing was possible. If collapsing was not possible, then the covariate or interaction was excluded from the pool.³⁹

All the resulting candidate main effects and the interactions identified using CHAID, were then processed using forward and backward stepwise regression (using SAS Logistic procedure with weights normalized to the sample size) to further refine the candidate variables and interaction terms.⁴⁰ After identifying a smaller pool of main effects and interactions for potential inclusion in the final model, a set of models were carefully evaluated to determine the final model. Because the SAS logistic procedure does not incorporate the sampling design, the final selection of the covariates was accomplished using the logistic regression procedure in SUDAAN.

For selecting variables or interactions in the stepwise procedures, we included variables or interactions that had a statistical significance level (alpha level) of 0.30 or lower (instead of the standard 0.05).⁴¹ Once the candidate list of main effects and interactions was determined, a thorough model-fitting process was used to determine a parsimonious model with few very small propensities. Model selection criteria were described in the overview of this chapter (Section A). The variables used as main effects and the interactions in the model are summarized in Table VI.3 for locating a sample member and in Table VI.4 for cooperation among located sample

³⁹ Deafness has historically been shown to be an important indicator of both locating a sample member, and of whether the sample member completed the interview. For that reason, deafness was allowed to remain in the covariate pool even though the number of deaf cases was sometimes as low as 18.

⁴⁰ Because no automated stepwise procedures are available in SUDAAN, the stepwise procedures described here were performed using SAS.

⁴¹ As stated earlier, we used a higher significance level because the purpose of the model was to improve the estimation of the propensity score and not to identify statistically significant factors related to response. In addition, the information sometimes reflected proxy variables for some underlying variable that was both unknown and unmeasured.

members. The R-squared is 0.028 (0.071 when rescaled to have a maximum of 1) for the location model and 0.049 (0.085 when rescaled) for the cooperation model. These values are similar to those observed for other response propensity modeling efforts using logistic regression with design-based sampling weights. For the location model, the proportion of concordant pairs is 63 percent, 35.7 percent of the pairs are discordant, and the p-value for the chi-square statistic from the Hosmer-Lemeshow (H-L) goodness-of-fit test is 0.272; these values indicate a reasonably good fit of the model to the data. For the cooperation model, the proportion of concordant pairs is 59.6 percent, and 39.5 percent of pairs are discordant. The p-value for the chi-square statistic for the (H-L) goodness-of-fit test is 0.868 for this model. Since the AIC is a relative number, and has no meaning on its own, values for the AIC are not provided here.

The primary factors are identified by the base variable, followed by the suffix “_1” if levels were collapsed in the variable as it is employed in the location model. If no collapsing was necessary, then no suffix is given. The factors with levels used in the location model include:

1. ***MOVE_1***. The number of address changes in the past five years; two levels: (1) at least one move, and (2) did not move, or information older than five years, or no information.
2. ***DIG_1***. Disability diagnostic classification; three levels: (1) mental disability, (2) physical disability (excluding deaf cases), and (3) deaf or unknown.
3. ***REPREPAYEE_1***. The identity of the payee with respect to the beneficiary; two levels: (1) the beneficiary received benefit payments himself or herself, or from a family member, and (2) an institution received payments on behalf of the beneficiary, or identity of payee not known.
4. ***PDZIPSAME***. Whether the beneficiary and the applicant for benefits lived in the same zip code; three levels: (1) beneficiary and applicant lived in the same zip code, (2) beneficiary and applicant lived in different zip codes, and (3) information unknown.
5. ***METRO_1***. Urbanicity of beneficiary’s place of residence; three levels: (1) beneficiary lived in metropolitan area, (2) beneficiary lived in nonmetropolitan area adjacent to a metropolitan area of 1 million or more, and (3) beneficiary lived in nonmetropolitan area not adjacent to a metropolitan area with population 1 million or more.
6. ***GENDER (SEX)***. Two levels: (1) male, and (2) female .
7. ***INSTIT***. Whether beneficiary is institutionalized; two levels: beneficiary is institutionalized, and (2) beneficiary is not institutionalized, or information unknown.
8. ***DIVISION***. Geographic region (based on U.S. Census divisions) of beneficiary’s place of residence; nine levels: (1) Pacific, (2) Mountain, (3) East North Central, (4) West North Central, (5) East South Central, (6) West South Central, (7) South Atlantic, (8) Middle Atlantic, and (9) New England.
9. ***SSIADDP***. The beneficiary was located at the address of payee obtained from SSI database; two levels: (1) yes, and (2) no.
10. ***LIVING_1***. Beneficiary’s living situation; two levels: (1) beneficiary lives with his or her parents, and (2) beneficiary does not live with his or her parents, or information unknown.
11. ***PHONE_1***. Number of phone numbers for a beneficiary in the SSA database over past five years; two levels: (1) only one phone number on file, and (2) one or more changes in phone number on SSA file, or information unknown.

12. **AGECAT.** Beneficiary's age category; four levels: (1) age in range 18 to 29 years, (2) age in range 30 to 39 years, (3) age in range 40 to 49 years, and (4) age in range 50 to 64 years.

Various interactions among these variables were also included in the model for locating the sample member. The main effects using the variable names listed above, as well as interactions, are provided in Table VI.3. An expanded form of Table VI.3, showing the specific levels of the interactions shown in Table VI.3, along with parameter estimates and their standard errors, is provided in Appendix J.

For the cooperation models, the primary factors include:⁴²

1. **MOVE_2.** The number of address changes in the past five years; two levels: (1) at most one move, and (2) two or more moves, or information older than five years, or no information.
2. **GENDER (SEX).** Same as location model definition
3. **SSI_SSDI_2.** Beneficiary recipient benefit type; two levels: (1) SSDI only, and (2) SSI only, or both SSI and SSDI.
4. **DIG.** Disability diagnostic classification; four levels: (1) mental disability, (2) physical disability (excluding deaf cases), (3) deaf, and (4) unknown.
5. **REPREPAYEE_2.** The identity of the payee with respect to the beneficiary; two levels: (1) Family member received benefits on behalf of beneficiary, and (2) the beneficiary received benefit payments himself or herself, or an institution received benefits on behalf of the beneficiary, or unknown.
6. **PDZIPSAME_2.** Whether the beneficiary and the applicant for benefits lived in the same zip code; two levels: (1) beneficiary and applicant lived in the same zip code, and (2) beneficiary and applicant lived in different zip codes, or information unknown.
7. **METRO.** Urbanicity of beneficiary's place of residence; six levels: (1) beneficiary lived in metropolitan area with population of 1 million or more, (2) beneficiary lived in metropolitan area with population between 250,000 and 1 million, (3) beneficiary lived in metropolitan area with population less than 250,000, (4) beneficiary lived in nonmetropolitan area adjacent to a metropolitan area of 1 million or more,

⁴² Primary factors that are based on the same base variable as those given in the location model, but with different collapsing of categories, are given the same name except they are followed by an “_2”.

- (5) beneficiary lived in nonmetropolitan area adjacent to a metropolitan area of less than 1 million, and (6) beneficiary lived in nonmetropolitan area not adjacent to any metropolitan area.
8. ***DIVISION_2***. Geographic region (based on U.S. Census divisions) of beneficiary's place of residence; four levels: (1) South Atlantic, (2) East North Central, (3) West South Central, and (4) other regions of the country that are not South Atlantic, East North Central, or West South Central.
 9. ***HISPANICITY***. Whether the beneficiary was Hispanic or not; two levels: (1) Hispanic, and (2) not Hispanic, or unknown.
 10. ***RACE_2***. Race of the beneficiary; three levels: (1) white, (2) Asian or Pacific islander, and (3) race known to be neither white nor Asian/Pacific Islander, or unknown.
 11. ***AGECAT_2***. Beneficiary's age category; two levels: (1) age in range 40 to 49 years, and (2) age in range 18 to 39 years, or 50 to 64 years.
 12. ***TOC_2***. Beneficiary's type of claim; two levels: (1) disability claim, and (2) survivor claim, or unknown.
 13. ***PHONE_2***. Number of phone numbers on SSA file over past five years; two levels: (1) one or fewer phone changes on SSA file, or unknown, and (2) two or more changes in phone number on SSA file.

Once again, various interactions among these variables were also included in the model for the cooperation of the sample members. The main effects using these variable names, as well as interactions, are provided in Table VI.4. An expanded form of Table VI.4, with the specific levels of the interactions shown in Table VI.4, along with parameter estimates and their standard errors, is provided in Appendix J.

After adjustments were applied to the sampling weights, the distribution of weights was reviewed to determine if trimming of the sampling weights was necessary. The maximum design effect due to unequal weighting was 1.05, observed with the youngest age group stratum, which indicated that trimming of the weights was unnecessary.

3. Post-Stratification

Post-stratification is the procedure in which the weighted sums of the response-adjusted weights are aligned to known totals external to the survey. This process offers face-validity for reporting population counts and has some statistical benefits. For the Representative Beneficiary Sample, we post-stratified to the 24 population totals obtained from the Social Security Administration (SSA).⁴³ In particular, the totals were the total number of SSI/SSDI beneficiaries by age (four categories), gender, and recipient status (SSI only, SSDI only and both).

C. TICKET PARTICIPANT SAMPLES

As noted earlier, the Ticket Participant Samples were selected from the population of Ticket-to-Work participants, a subset of all SSI/SSDI beneficiaries, which was partitioned based on different payment types in the Ticket-To-Work payment system (traditional vocational rehabilitation, milestone-outcomes, and outcome-only). Ticket participants using the traditional payment system accounted for 81 percent (17,081 of 21,196) of Phase 1 participants and 88 percent (30,254 of 34,312) of Phase 2 participants at the time when the sampling frame was developed. Participants using the milestone-outcomes payment system totaled 3,208 Phase 1 participants (15 percent of all Phase 1 participants) and 3,084 Phase 2 participants (9 percent of all Phase 2 participants). Phase 1 participants using the outcome-only payment system totaled only 907 Phase 1 participants (4 percent of all Phase 1 participants) and 974 Phase 2 participants (3 percent of all Phase 2 participants). As was also noted earlier, the PSUs in the initial sampling design did not contain a sufficient number of participants in the milestone-outcomes or outcome-only payment types for either phase to support analysis tasks. As a result, the clustered sample,

⁴³ These totals were obtained from a frame file provided by the Social Security Administration (SSA), giving information on basic demographics for all Supplemental Security Income (SSI) and Social Security Disability Income (SSDI) beneficiaries.

consisting of respondents selected within the initial sample design, was supplemented by a sample randomly selected from the entire population of milestone-outcomes and outcome-only participants (this was called the unclustered sample).

The clustered sample was part of the original sample design, so all the respondents in the clustered sample were selected from within PSUs, whereas the unclustered sample included units that may or may not have been in the selected PSUs. The unclustered sample was therefore organized into two strata: in the PSU or not in the PSU. In most cases, the respondents who were selected for the in-PSU stratum of the unclustered sample were also in the clustered sample. The weights for these duplicate cases had to be appropriately adjusted to account for a single respondent's appearance in two independent samples. The compositing scheme used to do this is discussed in the next subsection. In addition, respondents who could not be located in the central office⁴⁴ based on sample frame information were treated differently in the clustered and unclustered samples. In the clustered sample, potential respondents who could not be located were sent to the field for further follow-up, so that personal interviews could be attempted. In the unclustered sample, no further attempt was made to locate potential respondents who could not be located in the central office. If a sample member was selected as part of both the clustered and unclustered samples, and was sent to the field for further follow-up and was located in the field, the response had to be treated differently between the two samples. For the sample respondent, the value in the clustered sample was recorded according to its final status in the field, whereas the value in the unclustered sample was recorded as "ineligible for field follow-up." Sample members with no field follow-up (in the unclustered sample) were not "selected" for field follow-up. This process is analogous to the accepted practice of subsampling on nonrespondents for more intensive effort—in this case, we subsampled cases in the clustered

⁴⁴ The "central office" is the MPR Survey Operations Center (SOC).

sample for field follow-up. Ineligible-for-field-follow-up cases in the unclustered sample were treated differently than other ineligible cases, regardless of whether the observation was duplicated with a clustered observation. The procedure used to create composite weights (described in the next subsection) was not applied to these cases. Rather, such a case in the unclustered sample would have its weight zeroed out. If such a case was duplicated with one in the clustered sample, the clustered sample case kept its original weight, appropriately adjusted so that the sum of weights was kept the same. The final sample sizes for the participants sample are in Table VI.5.

TABLE VI.5

SURVEY POPULATION AND INITIAL AND FINAL CROSS-SECTIONAL SAMPLE SIZES BY SAMPLING STRATA IN THE PARTICIPANT SURVEY

Sampling Strata (Payment System)	Survey Population ^a	Initial Sample Size	Released Sample

Source: Sample allocation and counts computed by MPR.

^aThis column reflects weighted totals before compositing.

^bThe initial and final sample sizes include participants using the outcome-only and milestone-outcomes payment systems for which the number obtained from the original sample design was insufficient for analysis. A paired sample design was employed, whereby the participants who were in the PSUs could potentially be selected for both samples.

For the clustered samples for TTW participants, the sample was allocated across the 79 PSUs, with the Los Angeles PSU receiving a double allocation because it had two selections. Because of the smaller population sizes, we used only the full PSUs; we did not use the secondary sampling units (SSUs) in the Los Angeles PSU (four SSUs) or the Cook County (Chicago) PSU (two SSUs), which were used for the Representative Beneficiary Sample.

1. Initial Weight

The initial weights were computed based on the probability of selection within the PSU of the augmented sample and the probability of selection for the PSU. For the unclustered sample for the milestone-outcomes and outcome-only participants, we computed the initial weights based on the selection probability within the two sampling strata (in one of the PSUs or not in any PSU). Since only a portion of the augmented sample was actually released for use, the initial weights were then adjusted for the sample actually used in the survey.

2. Dual Frame Estimation

In order to obtain estimates for the milestone-outcomes and outcome-only Ticket Participant Samples, it was necessary to combine the clustered and unclustered samples using a “paired sample design.” As noted earlier, if a potential respondent in the unclustered sample could not be located in the central office, he or she was considered “ineligible for field follow-up” and nothing further was attempted on that case. However, if a potential respondent in the clustered sample could not be located in the central office, the case was sent to the field for follow-up. The paired sample design is the methodology used to combine the samples while accounting for these different rules of field follow-up. This requires the creation of composite weights that can be applied to the combined samples.

a. Conceptual Framework for Composite Weights

To compute a survey estimate, $Est(Y)$, using information from both samples (such as the proportion who are currently working), one cannot simply combine the two samples without adjusting the weights, since the clustered and unclustered samples in the Ticket Participant Sample represent the same target population among the Ticket Participants. Separate estimates can be computed from each sample, within each payment type, and combined using the equation

$$(1) \ Est(Y) = \lambda Y(\text{clustered}) + (1 - \lambda) Y(\text{unclustered})$$

where $Y(\text{clustered})$ is the survey estimate from the clustered sample for the given payment type, $Y(\text{unclustered})$ is the survey estimate from the unclustered sample for the given payment type, and λ is an arbitrary constant between 0 and 1. For example, for the Phase 1 milestone-outcomes payment type in the round 2 data, there were 438 in the clustered sample and 646 in the unclustered sample. The estimates to be combined are the proportion of the 438 in the clustered sample who are currently working and the proportion of the 646 in the unclustered sample who are currently working. In practice, of course, it is more complicated than this, because we have to account for the different rules used in the two samples for following up with nonrespondents or unlocated sample members, as will be discussed later. For the sampling variance, $V(Y)$, the estimate is computed using the equation

$$(2) \ V(Y) = \lambda^2 V(Y(\text{clustered})) + (1 - \lambda)^2 V(Y(\text{unclustered}))$$

where $V(Y(\text{clustered}))$ is the sampling variance for the estimate from the clustered sample, and $V(Y(\text{unclustered}))$ is the sampling variance for the estimate from the unclustered sample. Any value of λ will result in an unbiased estimate of the survey estimate, but not necessarily an estimate with the minimum sampling variance. A lambda value producing a sampling variance at

its minimum value results in the shortest confidence interval and, by implication, the most precise point estimate.

A value of lambda that minimizes the variance can be calculated as:

$$(3) \lambda = 1/V(Y(\text{clustered})) / [1 / V(Y(\text{clustered})) + 1 / V(Y(\text{unclustered}))] \\ = V(Y(\text{unclustered})) / [V(Y(\text{clustered})) + V(Y(\text{unclustered}))]$$

In this case, the minimum variance is:

$$(4) V(Y) = [V(Y(\text{clustered})) * V(Y(\text{unclustered}))] / [V(Y(\text{clustered})) + V(Y(\text{unclustered}))]$$

To compute the combined-sample estimate with minimum variance, survey estimates are derived by first computing the estimates for each sample, computing a value of λ for each pair of estimates, and then combining the point and variance estimates. Although this process produces minimum variance estimates, it is computer-intensive and results in some inconsistencies among estimates for percentages and proportions because of differing values of λ among levels of categorical variables.

For this survey round, we used an alternative approach, which is to identify a single lambda that was calculated using sample sizes and design effects due to unequal weighting for the two samples. In particular, λ acts as a weighting factor, with more weight given to the larger sample, with the sample sizes adjusted by the design effect due to unequal weighting. The formula for λ is given by:

$$(5) \lambda = \frac{n(\text{clustered}) / deff(\text{clustered})}{n(\text{clustered}) / deff(\text{clustered}) + n(\text{unclustered}) / deff(\text{unclustered})}$$

where $n(\text{clustered})$ and $n(\text{unclustered})$ are the sample sizes of the clustered and unclustered central office-located samples respectively, and $deff(\text{clustered})$ and $deff(\text{unclustered})$ are the

design effects due to unequal weighting for the clustered and unclustered central office-located samples, respectively.

b. Application of Composite Weights to Ticket Participant Sample

The population of participants in the relevant payment type can be separated into two parts: the portion that requires field follow-up and the portion that does not. For the portion of the target population that does not require field follow-up (that is, those who can be located by central office locating efforts), both the clustered and unclustered samples are independent samples that can provide unbiased estimates for this subpopulation. However, for the other portion of the target population that does require field follow-up (that is, those who cannot be located by central office locating efforts), only the clustered sample can provide unbiased estimates for this subpopulation, since unclustered sample cases were not eligible for field follow-up.

For the subpopulation that can be located by central office locating efforts, the clustered and unclustered samples can be combined using the compositing method (called a “dual frame” estimation procedure). To compute the composite weight for each sample member in the clustered central office-located sample:

$$(6) \quad WT = \lambda \text{ } WT(\textit{unclustered central office-located sample weight})$$

For units in the unclustered central office-located sample:

$$(7) \quad WT = (1 - \lambda) \text{ } WT(\textit{clustered central office-located sample weight})$$

Conversely, for the subpopulation of persons who could not be found by central office locating efforts, only the clustered sample can be used. In this case, no combining is required, and the clustered weight is used directly:

$$(8) \quad WT = 1 * WT(\text{clustered field-located sample weight})$$

The sum of weights among cases that were field-located in the clustered sample was adjusted so that the total sum matched the original total sum. Because the weights for each subpopulation sum to the total number of individuals in each subpopulation, the two subpopulations can simply be combined to form the entire target population.

Because of the paucity of sample members in the PSUs in some cases, it was not uncommon for the unclustered sample to be much larger than the clustered sample. When combining samples and creating composite weights, this sometimes resulted in weights with unacceptably high levels of variation. This made trimming necessary to reduce this variation, which is described in a later section.

3. Nonresponse Adjustment

As with the Representative Beneficiary Survey, the sampling weights were adjusted for the sample members who could not be located or who, once located, refused to respond, using weighted logistic regression propensity models. For the milestone-outcomes and outcome-only payment types, the nonresponse adjustments were applied to the composite weights for the clustered and unclustered samples. Roughly equal sample sizes with vastly different population sizes for the three payment types resulted in substantial differences in the magnitude of the weights. It was therefore necessary to fit separate logistic regression models for each payment type and each phase, first for the location adjustment and subsequently for the cooperation adjustment. This resulted in a total of 12 logistic regression models. These models were fitted in the same way as the adjustment models for the Representative Beneficiary Sample, as described in Section B.2 of this chapter. The main factors or attributes affecting our ability to locate and interview Ticket Participant sample members were the same as those used to locate and

interview Representative Beneficiaries, where the specific covariates for each of the 12 logistic models varied as described in subsequent sections.

a. Coding of Survey Dispositions

The scheme used to code respondents included the four general categories described in Section B.2: eligible respondents; ineligible respondents; located nonrespondents, and unlocated sample members.⁴⁵

b. Response Rates

The response rate for the Ticket Participant Sample is 80.4 percent, which is the weighted overall completion rate. This rate is a combination of the Phase 1 weighted overall completion rate (80.9 percent) and the Phase 2 weighted overall completion rate (79.5 percent). It is also the product of the weighted location rate and the weighted completion rate among located sample members. The weighted location rate is 94.5 percent, the combination of the Phase 1 location rate (95.7 percent) and the Phase 2 location rate (92.6 percent). The weighted cooperation rate (the weighted completion rate among located sample members), is 85.0 percent, the combination of the Phase 1 weighted completion rate (84.6 percent) and the Phase 2 weighted completion rate (85.8 percent).

Analogous to the beneficiary sample, the weighted rates are used because the sampling weights vary substantially across the sampling strata, and the weighted rates better reflect the potential for nonresponse bias.

⁴⁵ Disposition codes 420 (institutionalized) and 430 (unavailable during field period) were classified as nonrespondent codes in round 2, even though they were considered ineligible codes in round 1. This affected 4 cases in the round 2 participant sample. As a result, the nonresponse adjusted weight for these 4 cases was 0 in round 2, even though a similar response in round 1 would have resulted in a positive weight. Because of the small numbers, the effect on response rates is very small.

c. Factors Related to Location and Response

Tables VI.6 – VI.11 provide information for selected factors associated with locating a sample member within each phase-payment type combination, and factors associated with response among located sample members. The tables include unweighted counts of all sample members, counts of located sample members, and counts of the sample members for whom a completed interview was obtained or who were determined to be ineligible. The tables also include the weighted location rate, the weighted completion rate among located sample members, and the weighted overall completion rate for these factors, which helped inform the decision about the final set of variables used in the nonresponse adjustment models.

TABLE VI.6

^a The variable for SSI only, SSD only, and both SSI and SSDI includes slightly fewer unknown cases than the indicators for SSI or SSDI. Supplemental information was obtained to update the values of the former variable that was not used to update the latter variables.

d. Propensity Models for Weight Adjustments

As with the Representative Beneficiary Sample, the weight adjustments used in the Ticket Participant Sample were based on predicted propensities from a logistic regression model. For the location and the cooperation weight adjustments, we used logistic models to estimate the propensity for a sample member to be located and to cooperate. The inverse of the propensity score was used as the adjustment factor. The adjusted weight for each sample case is the product of the initial sampling weight and the adjustment factor.

The models were developed using the main effects described previously, plus selected interactions. Interactions to be considered for inclusion in model development were identified using CHAID, as described in the model-fitting section for the Representative Beneficiary Sample.

After identifying a smaller pool of main effects and interactions for potential inclusion in the final model using backward and forward stepwise regressions, a set of models was statistically

evaluated to determine the final model. Because the SAS logistic procedure does not incorporate the sampling design, the final selection of the covariates was accomplished using the logistic regression procedure in SUDAAN.

For selecting variables or interactions in the stepwise procedures, we again included variables or interactions that had a statistical significance level (alpha level) of 0.30 or lower (instead of the standard 0.05). Once the candidate list of main effects and interactions was determined, a thorough model-fitting process was used to determine a parsimonious model with few very small propensities. The main effects and the interactions in the models are summarized in Tables VI.12 and VI.13 for locating a sample member, and in Table VI.14 and VI.15 for cooperation among located sample members. The R-squared values for the 12 logistic models are given in Table VI.16. The unadjusted R-squared value for the location models ranges from a low of 0.015 (0.051 when rescaled to have a maximum of 1) up to 0.156 (0.258 when rescaled to have a maximum of 1). The unadjusted R-squared value for the nonresponse models ranges from a low of 0.059 (0.145 when rescaled as above) up to 0.155 (0.354 when rescaled). These values are similar to those observed for other response propensity modeling efforts using logistic regression with design-based sampling weights. The levels of concordant and discordant pairs, and the p-values for the Hosmer-Lemeshow goodness-of-fit test, are given in Table VI.17.

Although the minimum proportion of concordant pairs is 58.7 (Phase 1 traditional location model), and the maximum proportion of discordant pairs is 36.7 (Phase 1 outcome only cooperation model), the difference between the proportion of concordant pairs and the proportion of discordant pairs exceeds 0.3 for all models. The minimum p-value associated with the Hosmer-Lemeshow goodness-of-fit test is 0.184, indicating no evidence of lack of fit for any of the models.

2	Traditional	Cooperation	73.3	25.3	0.649

The primary factors in the location models are given below, with potential levels used in the models. Only the base variables with all possible levels are given. Details about how these levels were collapsed for each model are given in Appendix J.

1. **MOVE.** The number of address changes in the past five years; possible levels: (1) no moves, (2) one move, (3) two or more moves, and (4) information older than five years or no information.
2. **DIG.** Disability diagnostic classification; possible levels: (1) mental disability, (2) physical disability (excluding deaf cases), (3) deaf, and (4) unknown.
3. **REPREPAYEE.** The identity of the payee with respect to the beneficiary; possible levels: (1) the beneficiary received payments himself or herself, (2) a family member received benefits on behalf of the beneficiary, and (3) an institution received payments on behalf of the beneficiary, or identity of payee not known.
4. **PDZIPSAME.** Whether the beneficiary and the applicant for benefits lived in the same zip code; possible levels: (1) beneficiary and applicant lived in the same zip code, (2) beneficiary and applicant lived in different zip codes, and (3) information unknown.
5. **METRO.** Urbanicity of beneficiary's place of residence; possible levels: (1) beneficiary lived in metropolitan area of 1 million or more residents, (2) beneficiary lived in metropolitan area of 250,000 to 1 million residents, (3) beneficiary lived in metropolitan area of less than 250,000 residents, (4) beneficiary lived in nonmetropolitan area adjacent to a metropolitan area of 1 million or more, (5) beneficiary lived in nonmetropolitan area adjacent to a metropolitan area of less than 1 million, and (6) beneficiary lived in nonmetropolitan area not adjacent to any metropolitan area.
6. **GENDER (SEX); possible levels.** (1) male, and (2) female.
7. **REGION.** Geographic region (based on U.S. Census regions) of beneficiary's place of residence; possible levels: (1) West, (2) Midwest, (3) South, and (4) Northeast.
8. **LIVING.** Beneficiary's living situation; possible levels: (1) beneficiary lives alone, (2) beneficiary lives with his or her parents, and (3) beneficiary does not live alone or with his or her parents, or information unknown.
9. **PHONE.** Number of phone numbers on SSA file over past five years; possible levels: (1) only one phone number on file, (2) one change in phone number on SSA file, (3) two or more changes in phone number on SSA file, and (4) information unknown.
10. **AGECAT.** Beneficiary's age category. Possible levels: (1) age in range 18 to 29 years, (2) age in range 30 to 39 years, (3) age in range 40 to 49 years, and (4) age in range 50 to 64 years.

11. **SSI_SSDI.** Beneficiary status; possible levels: (1) SSI only, (2) SSDI only, or (3) both SSI and SSDI.
12. **TOC.** Type of claim; possible levels: (1) survivor claim, (2) disability claim, and (3) type of claim unknown.
13. **RACE.** Race; possible levels: (1) white, (2) black, (3) Asian or Pacific islander, and (4) not white, black, or Asian/Pacific islander, or unknown.
14. **HISPANIC.** Hispanic; possible levels: (1) Hispanic, and (2) not Hispanic, or unknown.
15. **LONG.** Longitudinal case; possible levels: (1) longitudinal case, and (2) not a longitudinal case.

Various interactions among these variables were also included in the model for locating the sample member. A list of the main effects using variable names listed above, as well as interactions, is provided in Tables VI.12 and VI.13. An expanded form of Table VI.12, with the specific levels of the main effects for each model and the interactions shown in Tables VI.12 and VI.13, along with parameter estimates and their standard errors, is provided in Appendix J. The primary factors in the cooperation models are given below. As with the location models, only the base variables are given. Since all the levels for the base variable were given in the discussion of the location models, they are not provided here. Details about how these levels were collapsed for each model are given in Appendix J:

1. **MOVE.** The number of address changes in the past five years.
2. **DIG.** Disability diagnostic classification.
3. **REPREPAYEE.** The identity of the payee with respect to the beneficiary.
4. **PDZIPSAME.** Whether the beneficiary and the applicant for benefits lived in the same zip code.
5. **METRO.** Urbanicity of beneficiary's place of residence.
6. **GENDER (SEX)**
7. **REGION.** Geographic region (based on U.S. Census regions) of beneficiary's place of residence.
8. **LIVING.** Beneficiary's living situation.

9. ***PHONE***. Number of phone numbers on SSA file over past five years.
10. ***AGECAT***. Beneficiary's age category.
11. ***SSI_SSDI***. Beneficiary status.
12. ***SSIADDP***. Address of payee obtained from SSI file.
13. ***TOC***. Type of claim.
14. ***RACE***
15. ***HISPANIC***
16. ***LONG***. Longitudinal case.

Once again, various interactions among these variables were also included in the model for the cooperation of the sample members. A list of the main effects using variable names listed above, as well as interactions, is provided in Tables VI.14 and VI.15. An expanded form of Tables VI.14 and VI.15, with levels appropriately collapsed for each model and the specific levels of the interactions shown in Tables VI.14 and VI.15, along with parameter estimates and their standard errors, is provided in Appendix J.

4. Trimming

After adjustments were applied to the sampling weights, the distribution of weights was reviewed to determine if trimming of the sampling weights was necessary. Because of the wide variation in the magnitude of the weights due to the use of the composite weights in the milestone-outcome and outcome-only payment types, trimming was sometimes necessary to increase precision of survey estimates. However, we minimize the extent of trimming to reduce the potential for bias in the survey estimates. The design effects associated with each of the six phase-payment type combinations before and after trimming, before poststratification, are presented in Table VI.18. Design effects were calculated separately within trimming strata, which were in turn defined within phase-payment type combinations. In general, the trimming strata were defined according to whether the observation was in the clustered or unclustered

sample and whether the sample was part of the longitudinal or supplemental sample. For unclustered cases, the trimming strata were further subdivided according to whether the sample case was in a PSU or not, and whether the frame used to select the sample value was the round 1 frame or the round 2 frame. The strata within which trimming was employed are given in Table VI.18. If no trimming was employed for a phase-payment type combination, the maximum design effect across all trimming strata is presented. In that instance, the stratum associated with that maximum design effect is not presented, since in most cases, when no trimming is required the design effects do not differ significantly across trimming strata.

TABLE VI.18
DESIGN EFFECTS BEFORE AND AFTER TRIMMING, WITHIN TRIMMING STRATA,
FOR SIX PHASE-PAYMENT TYPE COMBINATIONS

Payment Type and Phase		Trimming Stratum Where Trimming Occurred	Design Effect	
Phase	Payment Type		Before Trimming	After Trimming
1	Milestone-Outcome	Clustered Sample, Supplemental	3.37	3.13
1	Outcome-Only	Clustered Sample, Longitudinal	5.03	3.72
1	Traditional	No Trimming	1.06 (maximum)	1.06 (maximum)
2	Milestone- Outcome	No Trimming	1.89 (maximum)	1.89 (maximum)
2	Outcome-Only	Clustered Sample	3.40	2.86
2	Traditional	No Trimming	1.04 (maximum)	1.04 (maximum)

5. Post-Stratification

After the nonresponse adjustment and trimming, the weights were poststratified to the population age and gender totals for each payment type obtained from the SSA sampling frame. This sampling frame included all SSI or SSDI beneficiaries for each payment type within the Ticket Participant population. The distributions of weights within each phase and payment type combination were rechecked to determine if more weight trimming was necessary. No additional weight trimming was required.

VII. IMPUTATIONS

In the NBS, the data collection instruments were administered using computer-assisted interviewing (CAI) technology. The CAI technology allows the use of automated routing to move the respondent to the applicable questions and also implements checks of the entered data for consistency and reasonableness. In addition, because the program will not allow a question to be left blank, the interviewer cannot proceed unless an appropriate response has been entered (“don’t know” and “refused” are included as response options and used as necessary). These processes substantially reduce the extent of item nonresponse for a complex survey, but some item nonresponse will still exist. Item nonresponse includes cases where the question was mistakenly not asked and cases where “don’t know” or “refused” were recorded as responses.

For the NBS, imputation was used to compensate for item nonresponse. Two imputation methods were primarily used: deductive (or logical) imputation and unweighted hot-deck imputation. However, for some variables, insufficient data were available to use either of these two methods, so other specialized imputation procedures were employed to use the data available. The methods were selected based on the type of variable (dichotomous, categorical, or continuous), the amount of missing data, and the availability of data for the imputations. For some variables, imputations were processed using a combination of methods.

Where possible, imputed values were made consistent with pre-existing nonmissing variables by excluding donors with potentially inconsistent imputed values. After each imputation was processed, the imputed values were evaluated using a variety of quality control procedures. If the initial imputed value was out of an acceptable range or inconsistent with other data for that case, the imputation was repeated until the imputed value was in range and consistent with other reported data.

Deductive, or logical, imputation is the assignment of a value that can be deduced from other data or for which there is a high degree of certainty that the value is correct. This method was based on a review of data related to the imputed variable.

The hot-deck imputation procedure entails the classification of sample members into mutually exclusive and exhaustive imputation classes (or imputation cells) of respondents who are assumed to be similar relative to the key population variables (such as age, disability status, and SSI recipient status). For each sample member with a missing value (a recipient), a sample member with complete data (a donor) is chosen within the same imputation class to provide a value. It is desirable to have the imputation class contain sufficient sample members to avoid the selection of a single donor for multiple sample members with missing data. The hot-deck procedure is computationally efficient and, in a recent National Center for Education Statistics working paper (USDE 2001), a simulation study showed that a hot-deck procedure fared well in comparison to more sophisticated imputation procedures, including multiple imputation, Bayesian bootstrap imputation, and ratio imputation. However, it should be noted that no attempt was made to estimate the component of variance due to imputation, even though such a component is always positive. Users should be aware that variance estimates using imputed data will be underestimates, with the amount of bias in the variance estimate directly related to the amount of missingness in the variable of interest. For most of the variables requiring imputation, the extent of missingness was low, so that this component would be very small.

The hot-deck imputation procedure used an unweighted selection process to select a donor, with selections done within imputation classes defined by key related variables for each application. This was accomplished in two ways. In one of the applications, in addition to the variables defining the imputation classes, a sorting variable was included where the recipient and all donors within the imputation class were sorted together by the levels of this variable. Using

the sorted data within the imputation class, a case immediately preceding or following a sample member with missing data was randomly selected as the donor with equal probability. In the other application, a donor was randomly selected from within the imputation class. With either method, we allowed with-replacement selection of a donor for each recipient. In other words, a sample member could have been a donor for more than one recipient. Because the extent of missing values was very low, only a few donors were used more than once.

The factors used to form the cells for each imputed variable needed to be appropriate for the population, the data collected, and the purpose of the study. The imputation classes also needed to have a sufficient count of donors for each sample member with missing data. We used a variety of methods to form the imputation classes. These methods included bivariate cross-tabulations, step-wise regressions, and multivariate procedures such as CHAID (Chi-squared Automatic Interaction Detection software attributed to Kass (1980) and Biggs et al. (1991), and its application in SPSS is described in Magidson (1993)). To develop these imputation classes, we used information from both the interview and SSA data files. Classing and sorting variables were closely related to the variable being imputed (the response variable). Sorting variables were either less closely related to the response variable than classing variables, or were forms of the classing variables with finer levels. As an example of the latter situation, four age categories were sometimes used as imputation classes: (1) 18 to 29, (2) 30 to 39, (3) 40 to 49, and (4) 50 to 64. The actual age could then be used as a sorting variable, so that donors and recipients were as close together as possible in age.

If any missing values existed in variables used to define imputation classes, two different strategies were employed: (1) match recipients to donors who were also missing the value for the covariate; or (2) employ separate hot decks depending upon the availability of the variables defining the imputation classes. In the first instance, the level defined as the missing value was

treated as a separate level. In other words, if a recipient was missing a value for a variable defining an imputation class, then the donor also was missing the value for that variable. This strategy was employed if there were large numbers of donors and recipients missing the covariate in question. In the second instance, for a given recipient, a variable was only used to define the imputation class for that recipient if there was no missing value for that variable. The variables used to define an imputation class for each recipient would depend upon what values were nonmissing among those variables.

The hot-deck software automatically identified situations where the imputation class only contained recipients and no donors. In these cases, imputation classes were collapsed and the imputation redone using the collapsed classes. The strategy for collapsing classes required a ranking of the variables used to define the imputation class with regard to each variable's relationship to the variable requiring imputation. Those variables less closely related to the variable requiring imputation were more likely to have levels collapsed. In addition, variables with many levels were also more likely to have levels collapsed. In general, if more than a very small number of imputation classes required collapsing, then one or more variables were dropped from the definition of the imputation class and the imputation procedure was rerun.

Some variables were constructed from two or more variables. For some of the "constructed" variables, it was more efficient to impute the component variables and then to impose the recoding of the constructed variable on these imputed values. These component variables are not shown in the following tables because they were not included in the final data set.

For some of the imputed variables in the data set, the number of missing responses does not match the number of imputed responses. Often, these variables correspond to questions that follow a filter question. For example, question I33 asks if the respondent has difficulty climbing 10 steps and the follow-up question if the response is "yes," I34, asks if the respondent is able to

climb 10 steps at all. In order to be asked the follow-up question, the respondent must have answered “yes” to the screener question. If the respondent answered “no,” the follow-up question was coded a legitimate missing (“.”), which was not imputed. However, if the respondent refused to answer the screener question, the follow-up question was also coded a legitimate missing. If the screener variable was then imputed to be “yes,” the response to the follow-up question was imputed. This caused the count of the actual number of imputed responses to be greater than the number of missing or invalid responses.

A. NBS IMPUTATIONS OF SPECIFIC VARIABLES

Included below in several tables is information about how imputation was employed in the NBS. The tables include the imputed variable names and a brief description of each imputed variable. The tables also include the methods of imputation, total number of missing responses, the number of respondents eligible for the question, and the percentage of responses imputed. This information is recorded on the final file with an imputation flag, identified by the suffix “iflag,” which has the following nine levels: (.) legitimate missing or no answer; (0) self-reported data; (1) logical imputation; (2) administrative data; (3) hot-deck imputed; (4) imputation using the distribution of a variable related to the variable being imputed; (5) imputation based on specialized procedures specific to Section K; (6) constructed from other variables with imputed values; (7) round 1 data. In most cases, the logical assignments were done using imputed values.⁴⁶ Therefore, the distinction between “logically assigned” and “constructed from other variables with imputed values” is somewhat opaque. In general, if a logical assignment is done for variables corresponding directly to questionnaire questions, the

⁴⁶ No distinction was made between logical assignments using imputed values and logical assignments using self-reported values.

flag is set to 1. For variables constructed from these variables (prefixed with a “C_”), the flag is set to 6.

In the sections that follow, summaries of the imputations conducted are given, organized by the sections within the questionnaire to which the variables correspond. Details of some of the imputation types are given for each section.

1. Section L: Race and Ethnicity

Several questions included on the NBS instrument gathered information on the race and ethnicity of the respondents. Two of these variables, located in Section L, include imputed responses and are described in Table VII.1. In particular, L1_i corresponds to the question asking whether the respondent is Hispanic or not; C_Race_i corresponds to the question asking about the respondent’s race.

In this table, respondents who did not indicate in the questionnaire whether they were Hispanic were classified as such if the SSA administrative data so indicated; the single logical imputation was conducted by looking at the name of the respondent and comparing it to a list of Hispanic names provided by the North American Association of Central Cancer Registries (NAACCR 2003). For respondents who still had missing data, the Hispanic indicator was imputed using a random hot deck with imputation classes defined by the zip code of each sample member.

TABLE VII.1
RACE AND ETHNICITY IMPUTATIONS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
L1_i	Hispanic/Latino Ethnic Origins	1 logical imputation, 6 imputations from SSA's administrative data, 16 longitudinal imputations, 94 imputations from random hot deck	117	8,106	1.44
C_Race_i	Race	23 longitudinal imputations, 141 imputations from SSA's administrative data, 150 imputations from random hot deck	314	8,106	3.87

Source: NBS, round 2.

Respondents could choose from five race categories: white, black/African American, Asian, Hawaiian/Pacific Islander, and Native American/American Indian. Respondents were allowed to select more than one of these categories to identify themselves (as prescribed by the Office of Management and Budget). The final race variable on which imputation was applied had six categories, with a separate category for respondents reporting multiple races. Although the SSA administrative data did not have a category for multiple races, respondents with race information in the SSA files were categorized according to four of the five categories above (Hawaiian/Pacific Islanders were included with the respondents reporting Asian). Respondents who did not answer the race question but did have race information in the SSA files were categorized into one of the four categories. This resulted in misclassification of respondents with extant SSA administrative data who didn't answer the race question in the survey, but would have identified themselves in the survey as multiple race or Hawaiian/Pacific Islander. Hawaiian/Pacific Islanders were presumably misclassified as Asian using SSA administrative data. However, we assumed that the number of respondents like this was small so that misclassification was not a major problem. As with the Hispanic indicator, for respondents that still had missing data, race was imputed using a random hot deck with imputation classes defined

by the zip code of each sample member. If the respondent was a longitudinal case, then the imputed value from round 1 was used.

2. Section B: Disability Status Variables and Work Indicator

Table VII.2 describes five imputed variables that pertain to the sample member's disability status and an indicator of whether the respondent was currently working. These imputed variables include three variables that collapse and recode primary diagnosis codes from the International Classification of Diseases, Ninth Revision (ICD-9) in three different ways: C_MainConBodyGroup_i, which corresponds to the collapsing done in Table II.2, C_MainConDiagGrp_i, and C_MainConColDiagGrp_i. Additional disability status variables include age when the disability was first diagnosed (C_DisAge_i); and an indicator of childhood or adult onset of the disability (C_AdultChildOnset_i). A fourth variable with collapsed primary diagnosis codes was also imputed, with levels further collapsed from C_MainConDiagGrp_i. This variable (C_MainConInput_i) is not included in Table VII.2 because it was not released to the final file, but it was used in subsequent imputations as a classing variable. As with race and ethnicity, the age when the disability was first diagnosed cannot change from one round to the next. For 14 missing values among longitudinal cases, this age variable was obtained from round 1 data. All missing values for C_AdultChildOnset_i were "logically assigned" using the imputed values from C_DisAge_i, the age-of-onset variable. In addition, Section B contains a question asking whether the respondent was currently working (B24_i). This is a gate question for all of the work status variables in Section C.

TABLE VII.2
DISABILITY STATUS IMPUTATIONS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_MainConDiagGrp_i	Primary diagnosis group	104 sequential hot deck	104 ^a	7,388	1.40
C_MainConColDiagGrp_i	Main condition diagnosis group collapsed	104 sequential hot deck	104	7,388	1.40
C_MainConBodyGroup_i	Main condition body group	104 sequential hot deck	104	7,388	1.40
C_Disage_i	Age at onset of disability	208 sequential hot deck; 21 from longitudinal data	229	8,106	2.83
C_Adultchild_onset_i	Adult/child onset of disability	29 logical	29	8,106	0.36
B24_i	Currently working	8 random hot deck	8	8,106	0.09

Source: NBS, round 2.

^a Imputations include 31 cases coded as don't know or refused on B1 (condition exists which limit respondent's ability to work). To match the procedure used in round 1, these cases were all assumed to have a value of 1, indicating such a condition existed. The remaining 73 cases were code as don't know, refused, condition not reported, or uncodeable for one or more of the constituent diagnosis variables.

For variables where hot-deck imputation was required, the sequential hot deck with a sorting variable was used for the recoded and collapsed diagnosis codes, as well as disability age. The work indicator variable used a random hot deck. All of the variables in Section B used an indicator of whether the onset of the disability was in childhood or adulthood, as well as age and gender, to define imputation classes. One of the collapsed condition code variables, C_MainConInput_i was also used as a classing variable for disability age and the work indicator. Additional classing variables were used that were specific to the variable being imputed.

3. Section C: Current Jobs Variables

Several questions in the National Beneficiary Survey asked respondents about current employment. In Section C, these questions were only asked of respondents who indicated that they were currently working in question B24. They include salary (C_MainCurJobHrPay_i, C_MainCurJobMnthPay_i, and C_TotCurJobMnthPay_i), usual hours worked at the job or jobs (C8_1_i, C_TotCurWkHrs_i, and C_TotCurHrMnth_i), the number of places the respondent was employed (C1_i), and job description of the place of main employment (C2_1_1d_i). These variables are identified in Table VII.3.

Some of the variables in this table had missing values that were not directly imputed. Rather, constituent variables not included in this table had missing values that were imputed, and then these were combined to form the variables in the table. For example, C_TotCurWkHrs_i was constructed from the number of hours per week usually worked at the current main job plus the number of hours for each of the respondent's other jobs. In most cases, the respondent worked one job so C_TotCurWkHrs_i was set equal to C8_1_i. However, if the respondent worked multiple jobs, and the number of hours in secondary jobs was imputed, then C_TotCurWkHrs_i was "constructed from imputed variables."

TABLE VII.3
CURRENT JOBS IMPUTATIONS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C1_i	Number of current jobs	5 random hot deck	5	1,769	0.28
C2_1_1d_i	Main current job SOC code to one digit	12 random hot deck ^a	12	1,769	0.68
C8_1_i	Hours per week usually worked at current main job	38 random hot deck ^b ; 5 logical	43	1,769	2.43
C_TotCurWkHrs_i	Total weekly hours at all current jobs	39 random hot deck ^c , 8 constructed from imputed variables	47 ^d	1,769	2.66
C_TotCurHrMnth_i	Total hours per month at all current jobs	47 constructed from imputed variables	47	1,769	2.66
C_MainCurJobHrPay_i	Hourly pay at current main job	12 logical, 209 constructed from imputed variables	221	1,769	12.49
C_MainCurJobMnthPay_i	Monthly pay at current main job	14 logical, 12 imputed by distributional assumptions, 197 constructed from imputed variables	223	1,769	12.61
C_TotCurMnthPay_i	Total monthly salary all current jobs	22 logical, 197 sequential hot deck, 15 constructed from imputed variables	234	1,769	13.23

Source: NBS, round 2.

^a Imputations for current job variables include 5 cases coded as don't know or refused in B24, which were imputed as currently working in B24_i.

^b If C8_1_i was imputed by hot deck and the respondent had only one job, then the flag indicated that C_TotCurWkHrs_i was imputed by hot deck, even though this variable was not processed in the hot deck program.

^c The 5 "logically assigned" values are cases with 2 or more jobs, where one or more of the variables associated with the second, third, or fourth jobs may or may not be nonmissing. The values were assigned medians of similar respondents who were missing or not missing these three variables in the same way.

^d The 46 missing values do not include four cases where the number of jobs was imputed to 1, but the number of hours at the main job was not missing. The flag for the total number of hours worked in these cases was set to 0 ("self-reported"). The same is true for the missing values in the other total composite variables (C_TotCurHrMnth.and C_TotCurMnthPay)

Other variables had values imputed by using the distribution of a variable related to the variable at hand. For example, if the take-home monthly pay of the respondent's current main job was not missing but the gross monthly pay (C_MainCurJobMnthPay_i) of the respondent's current main job was missing, then the relationship between gross monthly pay and take-home monthly pay among respondents missing neither variable was used to determine the appropriate value for gross monthly pay. In particular, a random draw was selected from the observed distribution of relative taxes, where "relative tax" is defined as the proportion of a imputed gross monthly pay for 22 cases with missing data for C_MainCurJobMnthPay. As Table VII.3 indicates, hot-deck imputations were only applied to four of the jobs variables: C1_i, C2_1_1d_i, C8_1_i, and C_TotCurMnthPay_i. For C1_i, C2_1_1d_i, and C8_1_i, a random hot deck was used, with the collapsed condition code variable and level of education used as classing variables. Additional classing variables were also used that were specific to each variable. The sequential hot deck with a sorting variable was used in the imputation of missing values for C_TotCurMnthPay_i. The classing variables for this imputation were education, total number of hours worked on current jobs, collapsed job description code, and number of jobs, with the collapsed condition code variable used as a sorting variable.

4. Section I: Health Status Variables

A total of 56 health status variables where imputations were applied are in Section I of the National Beneficiary Survey questionnaire. The 56 imputed variables in this section, and the methods of imputation used in each case, are identified in Table VII.4. These items cover a range of topics, from the respondent's general health to more specific questions on the instrumental activities of daily living (IADLs) and activities of daily living (ADLs) and other health and coping indicators. Also included in this section are a series of questions pertaining to the respondent's use of illicit drugs and alcohol.

TABLE VII.4
HEALTH STATUS IMPUTATIONS

Variable Name	Description	Imputation Method ^a	Number Missing	Number Eligible	Percent Imputed
I1_i	Health during the past four weeks	16 hot deck	16	8,106	0.19
I9_i	Current health	48 hot deck	48	8,106	0.59
I17a_i	Wear glasses	20 hot deck	20	8,106	0.25
I17b_i	Difficulty seeing with glasses	17 logical, 36 hot deck	53	5,219	1.02
I18_i	Difficulty seeing no glasses	46 logical, 68 hot deck	114	2,887	3.95
I19_i	Uses special equipment because of difficulty seeing	78 logical, 10 hot deck	88	3,443	2.56
I21_i	Difficulty hearing	1 logical, 38 hot deck	39	8,106	0.48
I22_i	Able to hear normal conversation	34 logical, 25 hot deck	59	1,507	3.92
I23_i	Uses special equipment because of difficulty hearing	34 logical, 5 hot deck	39	1,507	2.59
I25_i	Difficulty having speech understood	6 logical, 47 hot deck	53	8,106	0.65
I26_i	Able to have speech understood at all	31 logical, 19 hot deck	50	2,279	2.19
I27_i	Uses special equipment because of difficulty speaking	31 logical, 9 hot deck	40	2,279	2.19
I29_i	Difficulty walking without assistance	12 logical, 47 hot deck	59	8,106	0.73
I30_i	Able to walk ¼ mile	22 logical, 75 hot deck	97	3,531	2.75
I31_i	Uses special equipment because of difficulty walking	22 logical, 16 hot deck	38	3,531	1.08
I33_i	Difficulty climbing 10 steps	9 logical, 76 hot deck	85	8,106	1.05
I34_i	Able to climb 10 steps at all	43 logical, 47 hot deck	90	3,664	2.46
I35_i	Difficulty lifting and carrying 10 lbs.	6 logical, 52 hot deck	58	8,106	0.72

TABLE VII.4 (continued)

Variable Name	Description	Imputation Method ^a	Number Missing	Number Eligible	Percent Imputed
I36_i	Able to lift or carry 10 lbs. at all	29 logical, 53 hot deck	82	3,373	2.43
I37_i	Difficulty using hands or fingers	39 hot deck	39	8,106	0.48
I38_i	Able to use hands or fingers at all	25 logical, 15 hot deck	40	1,966	2.03
I39_i	Difficulty reaching over head	46 hot deck	46	8,106	0.57
I40_i	Able to reach over head at all	35 logical, 21 hot deck	56	1,961	2.86
I41_i	Difficulty standing	75 hot deck	75	8,106	0.93
I42_i	Able to stand at all	31 logical, 21 hot deck	52	4,572	1.11
I43_i	Difficulty stooping	3 logical, 54 hot deck	57	8,106	0.70
I44_i	Able to stoop at all	33 logical, 41 hot deck	74	4,502	1.64
I45_i	Difficulty getting around inside home	34 hot deck	34	8,106	0.42
I46_i	Need help to get around inside home	31 logical, 5 hot deck	36	1,210	2.98
I47_i	Difficulty getting around inside home	7 logical, 33 hot deck	40	8,106	0.49
I48_i	Need help to get around outside home	17 logical, 26 hot deck	43	2,898	1.48
I49_i	Difficulty getting into/out of bed	35 hot deck	35	8,106	0.43
I50_i	Need help getting into/out of bed	21 logical, 17 hot deck	38	2,071	1.84

Source: NBS, round 2.

^a For all of the imputations using hot deck in this section, a sequential hot deck was used. There was therefore no need to distinguish between random and sequential hot decks.

An example of a logical assignment in this section: if a respondent did not answer whether they had difficulty seeing newsprint letters (I17), but indicated that he or she couldn't see newsprint letters at all (I18) or required special devices to read newsprint letters (I19), then I17_i was a logically assigned "yes".

As in previous sections, "constructed from imputed variables" refers to the fact that the constituent variables of each constructed variable were imputed.

All of the variables requiring imputation of missing values in the Health Status section were imputed using a random hot deck. The only classing variable that was common to all imputations was the collapsed condition code variable. Age and gender were also used in most imputations. The remainder of classing and sorting variables was specific to the variable being imputed.

5. Section K: Sources of Income Other than Employment

The imputed variables presented in this section are constructed variables that pertain to nonemployment-based income. These other sources include worker's compensation, private disability claims, unemployment, and generally other sources of regular income. The imputed variables in this section are described in Table VII.5.

TABLE VII.5
 IMPUTATIONS ON SOURCES OF INCOME OTHER THAN EMPLOYMENT

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_AmtPrivDis_i	Amount received from private disability last month	98 logical, 22 imputed using specialized procedures	120	8,106	1.48
C_AmtWorkComp_i	Amount received from workers' compensation last month	47 logical, 3 imputed using specialized procedures	50	8,106	0.62
C_AmtVetBen_i	Amount received from veterans' benefits last month	39 logical, 24 imputed using specialized procedures	63	8,106	0.78
C_AmtPubAssis_i	Amount received from public assistance last month	61 logical, 25 imputed using specialized procedures	86	8,106	1.06
C_AmtUnemploy_i	Amount received from unemployment benefits last month	47 logical, 5 imputed using specialized procedures	52	8,106	0.64
C_AmtPrivPen_i	Amount received from private pension last month	47 logical, 25 imputed using specialized procedures	72	8,106	0.88
C_AmtOthReg_i	Amount received from other regular sources last month	47 logical, 13 imputed using specialized procedures	60	8,106	0.74

Source: NBS, round 2.

In this section, respondents were first asked if they had received money from a specific source and then for the specific amount received from that source. If a respondent could not provide a specific value, the respondent was asked a series of questions on whether the value was above or below specific values. When a respondent could not provide a specific value, he or she was given the option of providing a range of values, where the optional ranges depended upon responses to a series of questions. After being classified into a range of values, the respondent was assigned the median of the specific values provided by respondents who gave responses

within the same range. If a respondent could not say whether the actual value was above or below a specific threshold, we imputed first the range (using a random assignment) and then assigned the median of the values provided by respondents who gave specific values within that range. If the respondent did not know if he or she received funds from a source, we then imputed whether or not the respondent did using a random hot deck, and then proceeded as above.

The logical assignments in this section derive from imputed values in the constituent questions. For example, if the respondent was imputed to not have received private disability insurance (K6a_i), then C_AmtPrivDis_i was a logically assigned “no.” Otherwise, if any income was derived from these sources but an imputation was required at some point in the sequence (either everything was imputed, or just the individual’s income was imputed) then the imputation flag indicated imputation by “special procedures.”

For variables requiring hot-deck imputation, a random hot deck was used for all imputations. The classing variables were the same for all variables: an indicator of whether the respondent was a recipient of SSI, SSDI, or both; living situation; and education. None of the variables requiring hot-deck imputation are listed in Table VII.5 because they were only component variables for the delivered variables listed in the table.

6. Section L: Personal and Household Characteristics

Other than the personal characteristics of race and ethnicity discussed earlier, most of the imputed variables in section L pertain to household characteristics. These questions include education (L3_i), marital status (L8_i), cohabitation status (C_Cohab_i), number of children in the household (C_NumChildHH_i), household size (C_Hhsize_i), and poverty level respondent’s body mass index (C_BMI_cat_i), since it is constructed of variables collected in section L. Most

of these variables were imputed early in imputation processing and were used in the imputation (FedPovertyLevel_cat1).⁴⁷ Also included in this section is the constructed variable for the of work status variables; however, poverty level was imputed later. Both sets of variables are discussed in this section.

The imputation of poverty level required the imputation of annual income and household size. The annual income question was another question in which a specific value was requested, and if a specific value could not be provided, then the respondent was asked if the annual income fell in certain ranges. For this item, some respondents provided a specific value; some respondents answered the questions on the ranges, and some refused to provide any information. Although annual income was a key variable used in the imputation of poverty level, it is not included in this table since it was not released in the final file. All of the missing values in C_FedPovertyLevel_cat1⁴⁸ were derived from the imputed annual incomes; hence all missing values are “constructed from imputed variables.” Table VII.6 identifies imputed variables in section L.

Logical assignments in this section are based on related variables also in this section. For example, the four logical assignments for L11_i are due to the fact that four respondents did not answer L11, but indicated in L16 that only one adult lived in the household, and in L17 indicated the number of children living with them in the household. For these four respondents, the value for L11 was logically assigned to 1 or 2 depending upon the response to L17.

⁴⁷ An additional variable, C_NumChildren_i, was also imputed. This variable is defined as the total number of children in the household plus the number of respondent’s children living outside the household. This variable was not used in any subsequent processing and upon further review, was not deemed necessary for analysis, but is in the final file.

⁴⁸ The name of this variable reflects that fact that the final variable was a categorical (as opposed to a continuous) measure of poverty levels.

TABLE VII.6

IMPUTATIONS OF PERSONAL AND HOUSEHOLD CHARACTERISTICS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_BMI_Cat_i	Body Mass Index categories	1 logical, 282 hot deck	283	8,106	3.48
L3_i	Highest year/grade completed in school	13 longitudinal imputations; 118 hot deck	131	8,106	1.62
L8_i	Marital Status	52 hot deck	52	8,106	0.64
L11_i	Living arrangements	4 logical, 54 hot deck	58	8,106	0.72
C_NumChildhh_i	Number of children living in the household	3 logical, 43 hot deck	46	8,106	0.57
C_hhsize_i	Household Size	1 logical, 48 hot deck	49	8,106	0.60
C_cohab_i	Cohabitation Status	4 logical, 45 hot deck	49	8,106	0.60
C_FedPovertyLevel_cat1	2004 Federal Poverty Level	2,809 constructed from imputed variables	2,809	8,106	34.65

Source: NBS, round 2.

For all of the variables requiring hot-deck imputation that are listed in Table VII.6, a random hot deck was used. The only classing variable common to all imputations was the collapsed condition code variable. Other variables were specific to the variable being imputed. The imputed annual incomes that were used in the determination of C_FedPovertyLevel_cat1 were imputed using a sequential hot deck with a sorting variable.

VIII. USING THE NBS RESTRICTED AND PUBLIC USE FILES

A. FILE CONTENT AND TECHNICAL SPECIFICATIONS

The NBS round 2 Restricted Use File contain 8,106 records and 5,930 variables. The Public Use File contains 4,864 observations and 700 variables. To reduce the risk of disclosure, individuals from the Ticket to Work participant sample are not included on the public file. Variables are positioned on the file in the following order:

Survey Administration Variables. These include variables related to survey administration including respondent type identifiers and other variables associated with the conduct of the survey.

Sampling Variables and Weights. These include administrative variables used for sampling purposes and administrative data that provide additional descriptive information about the sample.

Variables from Section A-M of the NBS Questionnaire. Variables are ordered within each section by related questionnaire item number. Constructed variables created from source variables within a section are ordered at the end of each section.

SSA Administrative Data. These include a select set of data from SSA administrative records to enhance analyses of Ticket to Work participants.

Both the Restricted Use File and Public Use File are available in a SAS “sas7bdat” format database. The Restricted Use File has the following technical specifications:

- Data set name: R2NBSRAF
- Number of observations: 8,106
- Number of variables: 5,930
- Date last created: October 7, 2009

The Public Use File has the following technical specifications:

- Data set name: R2NBSPUF
- Number of observations: 4,864
- Number of variables: 700
- Date last created: October 7, 2009

B. CHOOSING A SAMPLE AND WEIGHT VARIABLE

As discussed in Chapter II, the NBS comprises two independent samples: (1) the National Representative Beneficiary Sample and (2) the Ticket Participant Sample. Use of the appropriate weight variables allows estimates of either the national beneficiary population or the TTW participant population. The weights specified below should be used when performing any analysis. Due to the design of the NBS and the variation of weights within sampling strata, the use of unweighted rather than weighted data in the analysis will provide incorrect results.

Separate weights were computed for each sample to account for the sampling method, data collection method, and the target populations of the survey: one for the Representative Beneficiary Sample (R2_wtr2_ben), one for the Ticket Participant Sample (R2_wtr2cs_par), and one for the combined Representative Beneficiary and Ticket Participant sample (R2_wtr2_com). See Table VIII.1 for a summary of the appropriate weights for each population of interest.

TABLE VIII.1
NBS SAMPLE WEIGHTS

Weight Name	Description	Condition
R2_wtr2_ben	Beneficiary weight	Orgsampinfo_Tstatus=2 (Representative Beneficiary Sample)
R2_wtr2cs_par	Participant Weight	Orgsampinfo_Tstatus=1 (Ticket Participant Sample)
R2_wtr2_com	Composite Weight	Orgsampinfo_Tstatus=1 or 2 (Combined Sample)

It is not necessary to subset the file when using the weights and, in fact, subsetting the file may result in incorrect estimates and problems with running the computer software.⁴⁹ The weights equal 0.0 for any case that is not in the analysis population. The variable OrgSampInfo_Tstatus identifies whether the case was selected for the Ticket Participant Sample (Orgsampinfo_Tstatus=1) or for the Representative Beneficiary Sample (Orgsampinfo_Tstatus=2). If the population of interest is the national beneficiary population, the Representative Beneficiary Sample weight (R2_wtr2_ben) should be used. This variable has a value greater than 0.0 for 4,864 cases (where Orgsampinfo_Tstatus=2) and a weight value of 0.0 for the 3,242 participant sample cases. If the population of interest is the TTW participant population (for analyses using the Restricted Access File), the Ticket Participant Sample weight (R2_wtr2cs_par) should be used. This variable has a value greater than 0.0 for 3,242 participant cases (where Orgsampinfo_Tstatus=1) and a weight value of 0.0 for the 4,864 beneficiary cases (where Orgsampinfo_Tstatus=2).

A composite sample weight (R2_wtr2_com) that combines the Ticket Participant Sample and the Representative Beneficiary Sample is also provided on the Restricted Use File (using all 8,106 cases). While this weight was provided to increase the sample size of the TTW participants for analyses of the national beneficiary population, it adds minimal additional analytic power. This weight can be used, however, in lieu of the Representative Beneficiary Sample weight (R2_wtr2_ben) for analysis of the national beneficiary population. When using the combined beneficiary and participant weight, the variable “flagparti” (rather than OrgSampInfo_Tstatus)

⁴⁹ The design-based sampling variance estimate is best computed using the full data file because if subsetting is performed, some values for the design-based sampling variance parameters will be missing in the subset file. This can cause the software to provide incorrect sampling variance estimates or the computer program may fail to run properly.

can be used to identify Ticket participants (flagparti=1). As discussed in Chapter VI, 48 cases sampled as part of the Representative Beneficiary Sample also appeared on the Ticket Participant sampling frame. These cases can be identified as participants when using the combined weight using the variable flagparti.

C. ESTIMATING SAMPLING VARIANCE FOR NBS

The sampling variance of an estimate derived from survey data for a statistic (such as a total, a mean or proportion, or a regression coefficient) is a measure of the random variation among estimates of the same statistic computed over repeated implementation of the same sample design, with the same sample size, on the same population. The sampling variance is a function of the population characteristics, the form of the statistic, and the nature of the sampling design. The two general forms of statistics are linear combinations of the survey data (for example, a total) and nonlinear combinations of the survey data. Nonlinear combinations include the ratio of two estimates (for example, a mean or a proportion in which both the numerator and the denominator are estimated) and more complex combinations such as regression coefficients. For linear estimates with simple sample designs (such as a stratified or unstratified simple random sample) or complex designs (such as stratified multistage designs), explicit equations are available to compute the sampling variance. For the more common nonlinear estimates with simple or complex sample designs, explicit equations are not generally available and various approximations or computational algorithms are used to provide an essentially unbiased estimate of the sampling variance.

The NBS sample design involves stratification and unequal probabilities of selection. Variance estimates calculated from NBS data must incorporate the sample design features in order to obtain the correct estimate. Most procedures in standard statistical packages, such as SAS and SPSS, are not appropriate for analyzing data from complex survey designs, such as the

NBS design. These procedures assume independent, identically distributed observations or simple random sampling with replacement. Although the simple random sample (SRS) variance may approximate the true sampling variance for some surveys, it is likely to substantially underestimate the sampling variance with a design as complex as the NBS design. Complex sample designs have led to the development of a variety of software options that require the user to identify essential design variables such as strata, clusters, and weights.⁵⁰

The most appropriate sampling variance estimators for complex sample designs such as the NBS are the procedures based on the Taylor series linearization of the nonlinear estimator using explicit sampling variance equations, and the procedures based on forming pseudo-replications⁵¹ of the sample. The Taylor series linearization procedure is based on a classic statistical method in which a nonlinear statistic can be approximated by a linear combination of the components within the statistic. The accuracy of the approximation is dependent on the sample size and the complexity of the statistic. For most commonly used nonlinear statistics (such as ratios, means, proportions, and regression coefficients), the linearized form has been developed and has good statistical properties. Once a linearized form of an estimate is developed, the explicit equations for linear estimates can be used to estimate the sampling variance. Because the explicit selection, and unequal selection rates within strata). This is the basic variance estimation procedure used in SUDAAN, the survey procedures in SAS, Stata, and other software packages to accommodate simple equations can be used, the sampling variance can be estimated using many of the features

⁵⁰ A World Wide Web site that reviews software for variance estimation from complex surveys, created with the encouragement of the Section on Survey Research Methods of the American Statistical Association, is available on-line at <http://www.fas.harvard.edu/~stats/survey-soft/survey-soft.html>. The site lists software packages available for personal computers and provides direct links to the home pages of these packages. The site also contains articles and links to articles that provide general information about variance estimation, as well as links to articles that compare features of the software packages.

⁵¹ Pseudo-replications are restricted or random subsamples of a specific survey sample, as opposed to true replications of the sampling design, which entails the selection of multiple independent samples using the same sampling design.

of the sampling design (for example, finite population corrections, stratification, multiple stages of and complex sampling designs. To be able to calculate the variance, sample design information (such as stratum, analysis weight, and so on) is needed for each sample unit.

Currently, more survey data analysis software packages use the Taylor series linearization procedure and explicit sampling variance equations. Therefore, we developed the variance estimation specifications necessary for the Taylor series linearization procedure (PseudoStrata and PseudoPSU). Example code for this procedure using SAS and the survey data analysis software SUDAAN is given in Appendix K.⁵² Details about syntax for SAS are available from SAS (SAS Institute 2004). Details about SUDAAN syntax are available from RTI International (Research Triangle Institute 2004).

D. CODEBOOK

To aid the user, two codebooks were developed by MPR; one for the Restricted Use File and one for the Public Use Files. Both codebooks are available as separate reports and can be obtained from Mathematica Policy Research: “The National Beneficiary Survey: Round 2 Public Use File Codebook” (Wright et al. 2009) and “The National Beneficiary Survey: Round 2 Restricted Use File Codebook” (Wright et al. 2009).

The codebooks provide extensive documentation for each variable on the file including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes. Frequency distributions and means are also included as appropriate.

⁵² The example code provided in Appendix K is for simple descriptive statistics using the procedures DESCRIP in SUDAAN and SURVEYMEANS in SAS. Other procedures in SAS (SURVEYREG, SURVEYFREQ, and SURVEYLOGISTIC) and in SUDAAN (CROSSTAB, REGRESS, LOGISTIC, MULTILog, LOGLINK, and SURVIVAL) are available for more complex analyses. Since SUDAAN was created specifically for survey data, the range of analyses that can be performed with these data in SUDAAN is much wider than in SAS.

APPENDIX B

CHANGES IN QUESTIONNAIRE CONTENT BETWEEN ROUNDS 1 AND 2

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

APPENDIX B

CHANGES IN QUESTIONNAIRE CONTENT BETWEEN ROUNDS 1 AND 2

Round 1 Item	Problem / Issue	Revision
Section B		
B25. I am going to read you a list of reasons why some people do not work. For each of these, please tell me if it is a reason why {you are/NAME is} not currently working. PROBE: I know {you are/NAME is} not able to work, but the study rules require use to ask all beneficiaries the same questions.	Despite the probe included at round 1, several respondent complained about this question because they felt that their health was the main reason they were not able to work.	The round 1 probe was replaced with the following, "I need to read the entire list even though some of the reasons may not apply to you. If a reason does not apply to you, please just say so."
B31. CHECK: Did {NAME} work for pay in 2003 (B30=01) and was {NAME} in Phase 3 state (Phase=3)? (Yes / No)	Questions B31 and B32 attempt to determine whether sample members in Phase III states were working before the program rollout.	These items were only relevant in round 1 and thus were dropped from round 2.
B32. Did {you/NAME} work for pay before November 1, 2003? (Yes / No / Don't Know / Refused)		
Section E		
E22. {Have you/Has NAME} heard of any new programs in the last few years that allow beneficiaries who receive disability benefits from Social Security to get services to help them go to work or earn more, and Social Security pays for those services?	The question proved to be awkward and wordy during telephone administration.	This question was revised to read, "{Have you/Has NAME} heard of any new Social Security programs in the last few years that allow disability beneficiaries to get services to help them go to work or earn more?"
Section F		
F6. Who sent {you/NAME or his/her representative} the information about Employment Networks?	For these questions, up to three "other/specify" responses were allowed (i.e., separate specify responses for "employment network", other agency/organization", and "other"). A review of the frequencies revealed that the use of the other/specify responses was extremely low.	We eliminated the other/specify fields for "employment network" and "other agency/organization" but kept the field for "other"
F8. Who called {you/NAME or his/her representative}? Interviewer: Code all that apply.		
F10. Who talked to {you/NAME or his/her representative} about Employment Networks? Interviewer: Code all that apply.		

Round 1 Item	Problem / Issue	Revision
Section G		
<p>G31. You said {you/NAME} received employment, medical, and therapy services from {READ DE-DUPLICATED LIST FROM G30}. I want to be sure that each service provider is listed only once. Are any of these providers the same?</p>	<p>If a sample member only received one or two of the three types of services listed in the question stem, the word “and” caused some confusion.</p>	<p>In round 2, to eliminate confusion, “and” was changed to “or”.</p>
<p>G35. Did {you/NAME} receive services from this place at any time in 2003?</p>	<p>It is awkward to call the place where services were received “this place” when the respondent just reported the actual name of the place/provider.</p>	<p>In round 2, the actual name was filled in the question rather than calling it “this place.”</p>
<p>G36d. In 2003, please tell me if {you/NAME} received any of the following services from {PROVIDER FROM G30_1 DE-DUPLICATED LIST IF USED IN 2003}. Did {you/he/she} receive a medical procedure such as surgery or implants?</p>	<p>Several respondents felt this question was in the wrong place in this sequence of questions and only reported major medical procedures.</p>	<p>For round 2, we switched the positioning of questions G36d and G36m, and changed the wording of question G36d as follows: “Did {you/he/she} receive medical services?”</p>
<p>G53. The next few questions are about why {you/NAME} decided to use the employment, medical, and therapy services {you/he/she} used in 2003.</p>	<p>If a sample member only received one or two of the three types of services listed in the question stem, the word “and” can be confusing.</p>	<p>In round 2, to eliminate confusion, “and” was changed to “or”.</p>
<p>G58. Now I want to ask you about how easy it is to get information about the services we’ve been discussing. Thinking only about 2003, did {you/NAME or (his/her) representative} contact anyone to try to get information about services to help {you/NAME} work or live independently? This includes both services {you/NAME} used and didn’t use.</p>	<p>These questions confused some respondents because the first sentence refers to services they have used but the second sentence refers to both services they have used and have not used.</p>	<p>The text was revised as follows for round 2: “Now I want to ask you about how easy it is to get information about services. This includes both services {you/NAME} used and did not use. Thinking only about 2004, did {you/NAME or (his/her) representative} contact anyone to try to get information about services to help {you/NAME} work or live independently?”</p>

Round 1 Item	Problem / Issue	Revision
Section I		
I17. {Do you/Does NAME} have any difficulty seeing words and letters in ordinary newsprint even when wearing glasses or contact lenses if {you/he/she} usually wear{s} them?	We were concerned that this question elicited false positives because respondents zeroed in on the word “glasses.” Respondents seemed to interpret this question to be asking if they needed glasses to help them see.	<p>In round 2, this question was revised into the following question series:</p> <p>I17a. {Do you/Does NAME} ever wear glasses or contact lenses?</p> <p>I17b. {Do you/Does NAME} have any difficulty seeing words and letters in ordinary newsprint even when wearing {your/his/her} glasses or contact lenses?</p> <p>I18. {Do you/Does NAME} have any difficulty seeing words and letters in ordinary newsprint?</p>
I19. {Do you/Does NAME} use any devices, special equipment, or other special assistance because of difficulty seeing, such as telescopic lenses, adapted computer equipment, Braille, a guide dog, or a white cane?	Some respondents were not sure whether this included glasses or contact lenses (it does not).	For round 2, a mandatory probe that reads as follows was added: “Do not include glasses or contact lenses.”
I57. {Do you/Does NAME} have any difficulty eating?	Some respondents were not sure whether this includes difficulty chewing, swallowing, using utensils, etc.	To clarify, in round 2, we added a mandatory probe that reads: “This includes difficulty chewing, swallowing, or using utensils.”
Section J		
J3. {Do you/Does NAME} have to pay for any of this Medicaid coverage?	Some respondents were not sure whether this included co-pays or other out-of-pocket expenses they had to pay (it does not).	Since analysts will be able to match this against Medicaid Buy-in data, question J3 was dropped in round 2.

Round 1 Item	Problem / Issue	Revision
Section K		
<p>K1. Now, I'm going to ask you about the income {you/NAME} received last month, that is, in [INSERT LAST MONTH, THIS YEAR]. This includes earnings from work and benefits from different programs. When answering these questions, please think only about {your/NAME's} own earnings and benefits, and don't include earnings or benefits that other family members may have received.</p>	<p>This question series confused some respondents because K1 focuses on income from jobs and benefits. Questions K3 and K3a refer to income from jobs only, and question K4 refers to benefits only.</p>	<p>To clearly distinguish the questions asking about income from jobs from the questions asking about income from benefits, we revised the introductory text for questions K1, K3, and K4 as follows:</p>
<p>K3. Including all jobs {you/NAME} had, how much did {you/he/she} earn last month, that is, in [INSERT LAST MONTH, THIS YEAR] before taxes and deductions?</p>		<p>K1: The next set of questions is about income {you/NAME} received last month, that is, in [INSERT LAST MONTH, THIS YEAR]. This includes earnings from work and benefits from different programs. When answering these questions, please think only about {your/NAME's} own earnings and benefits, and don't include earnings or benefits that other family members may have received.</p>
<p>K3a. Including all jobs {you/NAME} had, about how much was left last month, that is in [INSERT LAST MONTH, THIS YEAR] as take-home pay after taxes and other deductions?</p>		<p>K3: First thinking about the jobs {you/NAME} had last month, including all jobs {you/he/she} had, how much did {you/he/she} earn last month, that is, in [INSERT LAST MONTH, THIS YEAR] before taxes and other deductions?</p>
<p>K4. Last month did {you/NAME} receive any income from Social Security?</p>		<p>K4: Thinking about the benefits {you/NAME} received last month, did {you/he/she} receive any income from Social Security?</p>
<p>K15. How much income did {you/NAME} receive last month from this other assistance?</p>	<p>It is awkward to refer to "this other assistance" when the respondent just reported the type of assistance.</p>	<p>In round 2, we changed "this other assistance" to "the assistance you just told me about."</p>
Section M		
<p>M2a. What is your current contact information?</p>	<p>There was no place in the questionnaire to collect proxy contact information.</p>	<p>For round 2, we inserted questions to collect proxy contact information. This question series begins after M2.</p>

APPENDIX C

REVISIONS MADE FOR THE LONGITUDINAL SAMPLE

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

APPENDIX C

REVISIONS MADE FOR THE LONGITUDINAL SAMPLE

Round 1 Item	Problem / Issue	Revision
Section B		
B1. Does a physical or mental condition limit the kind or amount of work or other daily activities {you/NAME} can do?	It may be awkward to ask respondents to report again on their physical and mental health conditions.	The following introductory text was added at the beginning of this module at round 2: “Thank you for agreeing to participate in the National Beneficiary Survey. The survey will cover questions that will help us learn about changes in {your/NAME’s} life since the last interview. Your answers are very important to the Social Security Administration. The first questions are about how {your/NAME’s} health affects {your/his/her} daily activities.
B3. {Do you/Does NAME} currently have any other physical or mental conditions that limit the kind or amount of work or other daily activities {you/he/she} can do?		The following introductory text was added at the beginning of this item: “Last year, we asked about physical or mental condition(s) that limited {your/NAME’s} ability to work or do other daily activities. We need to ask these questions again to be sure we have up to date information.” Additionally the word “currently” was added to questions B1 and B3, for example “Does a physical or mental condition currently limit the kind or amount of work or other daily activities {you/NAME} can do?”
B9. {Have you/Has NAME} received disability benefits from Social Security at any time during the last five years?	Questions B9 through B14 established survey eligibility in round 1, but there was no need to establish eligibility at round 2 for the longitudinal sample.	B9- B14 were not re-asked for respondents who completed round 1.
B10. We are only interviewing people who have received disability benefits in the past five years. I need to check with my supervisor and get back to you. Thank you for your help.		
B11. {Do you/Does NAME} still have the physical or mental		

APPENDIX C (continued)

Round 1 Item	Problem / Issue	Revision
conditions that made {you/him/her} eligible for Social Security disability benefits?		
B12. What physical or mental condition is the main reason {you were/NAME was} eligible for disability benefits?		
B13. {Do you/Does NAME} have any other physical or mental conditions that made {you/him/her} eligible for disability benefits?		
B14. What are those conditions?		
B15. What physical or mental condition was the main reason {you were/NAME was} limited when {you/he/she} first started getting disability benefits from Social Security?	<p>Questions B15 through B23 established the disabling condition(s) that the sample member had when he/she first started receiving benefits, the age at which he/she first became limited, and whether he/she was working at a job when he/she first became limited. Answers to these items were unlikely to change over time.</p>	<p>These items were skipped for longitudinal cases.</p>
B16. Did {you/NAME} have any other physical or mental conditions that limited the kind or amount of work or other daily activities {you/he/she} could do when {you/he/she} first started getting disability benefits?		
B17. What were those conditions?		
B18_age. How old {were you/was NAME} when {you/he/she} first became limited in the kind or amount of work or other daily activities {you/he/she} could do? Your best estimate is fine.		
B19. Did {you/NAME} become limited before the age of 18 or after age 18?		
B22. {Were you/Was NAME} working at a job for pay when {you/he/she} first became limited?		
B23. Did the job {you/NAME} had at that time require {you/him/her} to use a computer?		
B36. {Have you/Has NAME} ever worked for pay?	<p>For the longitudinal sample, question B36</p>	<p>B36 was dropped for longitudinal participants.</p>

APPENDIX C (continued)

Round 1 Item	Problem / Issue	Revision
	<p>would only identify respondents who have worked in the last year. However, question B30 captures this same information for the longitudinal group.</p>	
Section E		
<p>E3. {Have you/Has NAME} ever heard of a Plan for Achieving Self-Support or a PASS Plan?</p>	<p>In Section E of the round 1 questionnaire, longitudinal participants reported whether or not they had heard of the various SSA work incentive programs. Reporting awareness of these programs in round 2 may be biased by exposure to these items in round 1.</p>	<p>Longitudinal cases were skipped the program awareness items at round 2. However, because use can vary over time, we continued to ask if longitudinal beneficiaries if they have used any of these programs during 2004. Program definitions were added to the “ever used” items for the longitudinal cases. Due to a programming error at round 1, some respondents inappropriately skipped the awareness and use questions. This subset of longitudinal respondents received both the “ever heard of” and “ever used” questions.</p>
<p>E5. {Have you/Has NAME} ever heard of the earned income exclusion or the 1 for 2 earnings exclusion?</p>		
<p>E7. {Have you/Has NAME} ever heard of Property Essential to Self-Support, or <u>PESS</u>?</p>		
<p>E9. {Have you/Has NAME} ever heard of Continued Medicaid Eligibility or 1619(b) coverage?</p>		
<p>E12. {Have you/Has NAME} ever heard of the student earned-income exclusion?</p>		
<p>E15. {Have you/Has NAME} ever heard of a Trial Work Period?</p>		
<p>E17. {Have you/Has NAME} ever heard of an Extended Period of Eligibility for Medicare?</p>		
<p>E19. {Have you/Has NAME} ever heard of exclusions for Impairment-Related Work Expenses or Blind Work Expenses?</p>		
<p>E20a. {Have you/Has NAME} ever heard of Expedited Reinstatement?</p>		

APPENDIX C (continued)

Round 1 Item	Problem / Issue	Revision
E20c. {Have you/Has NAME} ever heard of benefit specialists or BPAOs?		
E26. In what year did {you/NAME or his/her representative} first hear about the Ticket to Work program?	Question E26 was designed to capture whether or not the sample member’s exposure to the Ticket to Work program was within the one-year recall period. This item was no longer relevant at round 2.	This question was dropped for the longitudinal sample at round 2.
E27. Now I would like to know how {you/NAME or his/her representative} first heard about the Ticket to Work program. Did {you/NAME or his/her representative} receive information in the mail?	Questions E27 through E35 ask how the sample member first heard about the Ticket to Work program (e.g., by phone, mail, etc.). Because these questions ask about one-time events, they should not change over time.	These questions were dropped for the longitudinal participant sample at round 2.
E28. Who sent {you/NAME or his/her representative} the information?		
E29. Did somebody call {you/NAME or his/her representative}?		
E30. Who called {you/NAME or his/her representative}?		
E31. Did somebody talk to {you/NAME or his/her representative} about the program in-person?		
E32. Who talked to {you/NAME or his/her representative} about the program?		
E33. Did {you/NAME or his/her representative} learn about the program on a web site?		
E34. Do you recall {NAME} getting a Ticket in the mail from Social Security? It looks like a certificate with blue and red writing and the title says ‘Ticket to Work and Self-Sufficiency’.		
E35. Did {you/NAME} ever try to get a Ticket from Social Security or anywhere else?		

APPENDIX C (continued)

Round 1 Item	Problem / Issue	Revision
E36. {Have you/Has NAME} ever used {your/his/her} Ticket to sign up with an Employment Network?	Since longitudinal respondents had already answered this item at round 1, only Ticket use in the past year would not be known.	This question was skipped for the longitudinal sample. All longitudinal cases who reported being aware of Ticket To Work were asked if they were signed up with an EN in 2004.
E37a. Now I am going to ask about {your/NAME's} Ticket use in 2004. When we interviewed you last year, you said {you were /NAME was} signed up with {EN FROM ROUND 1 E39 OR E46 WHEN E41=01 OR E45=01}. {Are you/Is NAME} currently signed up with {EN FROM ROUND 1 E39 OR E46 WHEN E41=01 OR E45=01}?	If respondents reported being signed up with an Employment Network (EN) in 2003 (at round 1), we wanted to refer to this EN and ask respondents if they were still signed up with this EN in 2004.	We added the following transitional text before question E37: "Now I am going to ask you about your Ticket use in 2004." If respondents reported being signed up with an Employment Network (EN) in 2003 at round 1, they received items E37a , E37Amth, E37ayr, E37a0, E37a1, and E37b instead of items E37, E38, E39, E40mth, E40yr, E41, E42mth, E42yr, and E43. If respondents was not signed up with an EN in 2003, they skipped to E37.
E37. Now I am going to ask you about {your/NAME's} Ticket use in 2004. {Were you/Was NAME} signed up with any Employment Networks or a State Vocational Rehabilitation Agency at any time in 2004?		
E48. {Have you/Has NAME} ever used {your/his/her} Ticket to sign up with any other Employment Networks that we haven't yet talked about?	Longitudinal participants will have already reported on all Employment Networks at round 1.	Questions E48 through E50yr were skipped for the longitudinal sample.
E49. How many other Employment Networks {have you/has NAME} been signed up with?		
E50mth. The Ticket to Work program started in 2001. In what month and year did {you/NAME} first use {your/his/her} Ticket to sign up with an Employment Network?		
E50yr. PROBE: The Ticket to Work program started in 2001. In what month and year did {you/NAME} first use {your/his/her} Ticket to sign up with an Employment Network?		

APPENDIX C (continued)

Round 1 Item	Problem / Issue	Revision
Section G		
G1. Since {age 16/becoming disabled}, {have you/has NAME} received any employment services to help {you/him/her} get a job?	Information would be duplicated if longitudinal sample members were again asked if they had received employment, job training, medical services, mental health care, or been enrolled in school since becoming disabled (or since age 16).	For the longitudinal sample, these questions were revised to focus on employment-related services received in 2004 only (for example “Thinking about 2004, did you receive any employment services to help you get a job?”).
G10. Since {age 16/becoming disabled}, {have you/has NAME} received any training to help {you/him/her} get a new job or change careers?		
G15. Since {age 16/becoming disabled}, {have you/has NAME} received any medical services to improve {your/his/her} ability to work or live independently?		
G19. Since {age 16/becoming disabled}, {have you/has NAME} received mental health therapy or counseling to improve {your/his/her} ability to work or live independently? This could include treatment for alcohol or drug abuse.		
G23. Since {age 16/becoming disabled}, {have you/has NAME} enrolled in school or taken any classes to help {you/him/her} get a new job or change careers? Please do not include any training you have already told me about.		
G33. Think about all the services {you/NAME} received from {PROVIDER FROM G30_1 DE-DUPLICATED LIST}. In what year did {you/he/she} last receive services from {PROVIDER FROM G30_1 DE-DUPLICATED LIST}? Was it in 2005, in 2004, or before 2004?	Questions G33, G34, and G35 ask respondents to report the time period in which they received services from each provider reported in Section G.	Since longitudinal respondents were only asked about services received in 2004, these items were skipped for longitudinal respondents.
G34. Was it: Within the last 2 years, 2 to 5 years ago, 5 to 10 years ago, or More than 10 years ago?		
G35. Did {you/NAME} receive services from {PROVIDER FROM G30_1 DE-DUPLICATED LIST} at any time in 2004?		

APPENDIX C (continued)

Round 1 Item	Problem / Issue	Revision
Section L		
L1: What is your ethnic background?	Answers to these questions should not change over time.	These questions were skipped for the longitudinal sample.
L2: What is your race?		
L4: What is the highest year or grade your father finished in school?		
L5: What is the highest year or grade your mother finished in school?

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
Section B			
B25	What are they (the other reasons you are not working that I didn't mention)?	a=A physical or mental condition prevents {you/him/her} from working b={You/name} cannot find a job that {you are/(he/she) is} qualified for c={You do/name does} not have reliable transportation to and from work d={You are/name is} caring for someone else f={You/name} cannot find a job {you want/(he/she) wants} g={You are/name is} waiting to finish school or a training program h=Workplaces are not accessible to people with {your/name's} disability i={You do/name does} not want to lose benefits such as Disability, Worker's Compensation, or Medicaid j={Your/name's} previous attempts to work have been discouraging l=Others do not think {you/name} can work m=Employers will not give {you/name} a chance to show that {you/he/she} can work	n=Can't find a job/job market is bad o=Lack skills
B39	Who {do you/does NAME} discuss your work goals with the most?	01=Parent/guardian 02=Spouse/partner 03=Friend 04=Job coach 05=Employer/supervisor 06=Other relative 07=Case worker/counselor/program staff 08=Medical provider 09=Other (SPECIFY: <OPEN>)	10=Other non-relative

APPENDIX D (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
B42	Who else {do you/does NAME} discuss {your/his/her} work goals with?	01=Parent/guardian 02=Spouse/partner 03=Friend 04=Job coach 05=Employer/supervisor 06=Other relative 07=Case worker/counselor/program staff 08=Medical provider 09=Other (SPECIFY: <OPEN>)	10=Other non-relative
B45	Who else {do you/does NAME} discuss {your/his/her} work goals with?	01=Parent/guardian 02=Spouse/partner 03=Friend 04=Job coach 05=Employer/supervisor 06=Other relative 07=Case worker/counselor/program staff 08=Medical provider 09=Other (SPECIFY: <OPEN>)	10=Other non-relative
Section C			
C23	What kind of special equipment {do you/does NAME} use?	01=Brace 02=Cane/crutches/walker 03=Wheelchair 04=Modified computer hardware 05=Modified computer software 06=Other (SPECIFY: <OPEN>)	07=Hearing aids 08=Glasses

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
C35	Are there any changes in {your/NAME's} {main/current} job or workplace related to {your/his/her} mental or physical condition that {you need/he/she needs}, but that have <u>not</u> been made? (IF YES) What are those changes?	<OPEN>	a=Need special equipment b=Need changes in work schedule c=Need changes to the tasks d=Need changes to environment e=Need co-workers to assist
Section D			
D23	Why did {you/NAME} stop working at this job?	<p>LAYOFF, FIRED, RETIRED</p> <p>01=Layoff, plant closed 02=Fired 03=Retired/old age 04=Job was temporary and ended</p> <p>PROBLEMS WITH JOB</p> <p>05=Did not like supervisor or co-workers 06=Did not like job duties 07=Did not like job earnings 08=Did not like benefits 09=Did not like opportunities for advancement 10=Did not like location 11=Did not get accommodations that were needed</p> <p>OTHER PROBLEMS</p> <p>12=Transportation problems 13=Decided to go to school 14=Child care responsibilities (pregnant) 15=Other family or personal reasons</p> <p>DISABILITY</p> <p>16=Disability got worse 17=Became disabled 18=Other (SPECIFY: <OPEN>)</p>	19=Moved to another area 20=Found another job 21=Loss or potential loss of benefits 22=Work schedule

APPENDIX D (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
D25b	Did you work fewer hours or earn less money than you could have because {you/he/she} you...	a={Were/Was} taking care of somebody else b={Were/Was} enrolled in school or a training program c=Wanted to keep Medicare or Medicaid coverage d=Wanted to keep cash benefits such as disability or workers compensation e=Just didn't want to work more f=Are there any reasons I didn't mention why {you/NAME} might have chosen to work or earn less than {you/he/she} could have during 2004 (SPECIFY: <OPEN>)	g=Had medical problems/complications
D26	In 2004, do you think {you/NAME} could have worked or earned more if {you/he/she} had:	a=Help caring for {your/his/her} children or others in the household b=Help with {your/his/her} own personal care c=Reliable transportation to and from work d=Better job skills e=A job with a flexible work schedule f=Help with finding and getting a better job g=Any special equipment or medical devices (SPECIFY: <OPEN>) h=Is there anything else that I didn't mention that would have helped {you/NAME} to work or earn more during 2004 (SPECIFY: <OPEN>)	i=Better health/treatment
Section E			
E43	Why {are you/is NAME} no longer receiving services from {EN IN 2004 FROM E39}?	<OPEN>	01=Never received any info 02=Found a job 03=Cannot work for health reasons 04=Other reason related to personal circumstance 05=Other reason related to EN 06=Other
Section F			
F14	Why didn't {you/NAME or his/her representative} try to use {your/NAME's} Ticket with the State VR agency in 2004?	<OPEN>	01=Agency didn't help 02=Did not know could 03=Was not healthy enough 04=Other

APPENDIX D (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
F29	After receiving information about the Employment Networks in {your/NAME's} area including the State VR agency or {STATE NAME FOR VR}, why didn't {you/NAME or his/her representative} contact any of them?	01=Physical/mental condition 02=Changed mind 03=Family responsibilities 04=Family would not support 05=Could not get reliable transportation 06=Economic conditions changed 07=Feared services would endanger benefits 08=Information too confusing 09=Employment network {name} wanted was not participating 10=ENs too far away 11=Could not get in contact with ens 12=No ENs provided services {name} needs 13=No ENs serve my kind of disability 14=Other (SPECIFY: <OPEN>)	15=Got a job or in school
F31	What are the main reasons {you did/NAME did} not try to participate in the Ticket to Work program in 2004?	<OPEN>	01=Health Reasons 02=H had a job/in school 03=Did not know about program 04=Did not want to/did not try 05=Other 06=Cannot work, reason unspecified
Section G			
G7	Thinking about {PROVIDER FROM G2}, was this place:	01=A state agency 02=A private business 03= Some other type of place (SPECIFY: <OPEN>)	04=School
G9	Was this place a:	01=A vocational rehabilitation agency 02=A welfare agency 03=A mental health agency 04=Some other state agency (SPECIFY: <OPEN>) 05=Some other type of place (SPECIFY: <OPEN>)	06=Workforce center/ employment office

APPENDIX D (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
G13	Thinking about {PROVIDER FROM G11}, was this place:	01=A state agency 02=A private business 03= Some other type of place (SPECIFY: <OPEN>)	04=School or college
G18	Thinking about {NEW PROVIDER FROM G16}, was this place:	01=A clinic, 02=A hospital 03=A doctor's office, or 04=Some other type of place (SPECIFY: <OPEN>)	05=A school or college 06=A nursing home/group home 07=A government agency 08=In home care 09=A medical equipment store 10=A rehabilitation/counseling center 11=Physical therapy center
G22	Thinking about {NEW PROVIDER FROM G20}, was this place:	01=A mental health agency 02=A clinic 03=A hospital, 04=A doctor's office, or 05=Some other type of place (SPECIFY: <OPEN>)	06=Residential treatment program/facility 07=Rehab center/counseling center/day program
G45	In 2004, who paid for the services {you/NAME} received from {PROVIDER FROM G32 DE-DUPLICATED LIST IF USED IN 2004}?	01={Name} 02=Provider from g32 de-duplicated list if used in 2004 03=No one 04=Family 05=Employment network 06=Medicare 07=Medicaid 08=Employer 09=Non-profit organization serving people with disabilities 10=Worker's compensation 11=Disability insurance 12=Other (SPECIFY: <OPEN>)	14=School/Financial Aid/Grant 15=State agency/county/government

APPENDIX D (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
G53	Thinking only about the services {you/NAME} used in 2004, what are the main reasons {you/he/she} decided to use these services?	01=To find a job/get a better job 02=To increase income 03=To improve health 04=To improve ability to do daily activities 05=To avoid a continuing disability review 06=Someone pressured {name} to participate 07=Wanted access to a specific program/service/resource 08=Other (SPECIFY: <OPEN>)	09=To be more independent
G55	Who pressured {you/NAME} to use these services?	01=Parent/guardian 02=Spouse/partner 03=Other family member 04=Friend/co-worker 05=Employer/supervisor 06=Staff of employment network 07=Vocational rehabilitation case manager 08=Job coach 09=SSA letter 10=SSA staff 11=Benefit specialist/bpao 12=Other (SPECIFY: <OPEN>)	13=Health care provider 14=Court/Police
G56	How did {your/NAME's} (PERSONS(S) FROM G55) pressure :you/NAME" to use these services	01=Said {name} would lose disability and/or health insurance benefits 02=Would not take "no" for an answer 03=Threatened to withhold services 04=Threatened to take away other support (e.g., kick out of the house) 05=Other (SPECIFY: <OPEN>)	06=Threatened hospitalization/jail
G61	Why {were you/was NAME} unable to get these services?	<OPEN>	01=Not eligible/request refused 02=Lack of information 03=Could not afford/insurance did not cover 04=Did not try 05=Too difficult/too confusing 06=Problems with the service or agency 07=Other

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
Section H			
H3	Why did {you/NAME} decide to participate in the Ticket to Work program?	<OPEN>	01=Wanted to get a job/ more money/benefits 02=Wanted to feel more independent 03=Other
H23	Why didn't {you/NAME or his/her representative} try to use {your/NAME's} Ticket with the State VR agency in 2004?	<OPEN>	01=Signed up with other agency 02=Already receiving services 03=Other
H29	Why didn't {you/NAME or (his/her) representative} try to use {your/NAME's} Ticket with {any of} the other Employment Network(s) {you/NAME or (his/her) representative} contacted in 2004?	<OPEN>	01=Location 02=Other
H31	Why didn't {any of} the other { Employment Network(s) {you/NAME} tried to use {your/his/her} Ticket with accept {your/NAME's} Ticket in 2004?	01=Not taking tickets when contacted 02=Did not offer services {name} needed 03=Did not serve people with {name's} disability/needs 04={Name} not willing/able to work full-time/enough hours 05={Name} not willing to go off of disability benefits 06= Other (SPECIFY: <OPEN>)	07=Trouble contacting EN
H33	What information did {you/NAME} need but didn't get?	<OPEN>	01=How/where to use the ticket 02=Services provided 03=Other
H35	Why did {you/NAME or (his/her) representative} choose {{LONGEST} EMPLOYMENT NETWORK IN 2004}?	01=Staff were most responsive/courteous/knowledgeable 02=Most willing to provide the services {name} wanted 03=Served people with {name's} disability/needs 04=Wait for services was not too long 05=Only provider nearby/closest provider 06=Only provider willing to accept ticket 07=Other (SPECIFY: <OPEN>)	08=Knew about them or referred to them 09=Financial compensation

APPENDIX D (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
H38	What problems did {you/NAME} have during 2004 (with the services you received from EN)?	<OPEN>	01=Trouble making/keeping contact 02=Problems receiving services 03=Problems with counselor 04=Other
H48	What was the problem about?	<OPEN>	01=Problems making/keeping contact 02=Problems receiving services 03=Other
Section I			
I20	What devices, equipment, or other types of assistance {do you/does NAME} use? Anything else?	01=Telescopic lenses 02=Adapted computer equipment 03=Braille 04=Readers 05=Guide dog 06=White cane 07=Other seeing assistance (SPECIFY: <OPEN>)	08=Magnifying glass
I32	What devices, equipment, or other types of assistance {do you/does NAME} use? Anything else?	01=Braces, crutches, cane, or walker 02=Wheelchair or scooter 03=Prosthetic device 04=Special chair (not wheelchair) 05=Vehicle hand controls 06=Lift (home or vehicle) 07=Other mobility assistance (SPECIFY: <OPEN>)	09=Special shoes or shoe inserts

Section J

APPENDIX G

DESCRIPTION OF CONSTRUCTED VARIABLES

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

DESCRIPTION OF CONSTRUCTED VARIABLES

Variable Name	Description
Sampling Variables and Administrative Variables Used in Survey Administration	
R2_OrgSampInfo_age	Age of sample member at time of sample selection. Based on date of birth from SSA administrative records.
R2_OrgSampInfo_Bstatus	Indicates whether sample member receives SSI, SSDI, or both SSI and SSDI. From SSA administrative records.
R2_OrgSampInfo_DOB	Sample member date of birth from SAS administrative records.
R2_OrgSampInfo_Phase	Ticket to Work roll-out phase state from SSA administrative records. Note that for the Participant sample, the target population is comprised of individuals who were participants in the Phase 2 states (based on address at time of roll-out) as well as the Phase 1 longitudinal cases and a Phase 1 supplement.
R2_OrgSampInfo_PSU	Sampling PSU. For beneficiaries, based on zipcode as of June of the year they were sampled. For participants, sample PSU is based on the zipcode at the time the ticket was assigned.
R2_OrgSampInfo_Release	Sample release number.
R2_OrgSampInfo_SDate	Date sample frame pulled.
R2_OrgSampInfo_SSIage	Age began receiving SSI benefits. From SSA administrative records.
R2_OrgSampInfo_Ssidate	Date began receiving SSI benefits. From SSA administrative records.
R2_OrgSampInfo_Tstatus	Indicates whether sample member was a Ticket to Work Participant at the time of sample selection.
R2_A_PSU	Analytical PSU for variance estimation using SUDAAN. For clustered samples (beneficiaries and participants) A_PSU = PSU identifier. For unclustered Participant sample A_PSU = linkid.
R2_A_Strata	Analytical strata for Beneficiary and Participant samples for variance estimation using SUDAAN. For A_strata the first digit=R2_Orgsampinfo_phase. Among clustered cases (including all cases in the Beneficiary and Traditional payment Ticket Participant samples) all remaining digits are 0. Among unclustered cases in the participant sample, the second digit=R2_R2_C_Paymenttype, the third digit indicates whether the unclustered case was in a psu, and the fourth digit=R2_Frame.
R2_Cohort	Age cohort sampling strata for Beneficiary sample. Based on date of birth from SSA administrative records.
R2_PaymentType	Sampling strata variable for Ticket Participant sample. Indicates Employment Network payment type. From SSA administrative records.
R2_Flagparti	For use with the combined Beneficiary and Ticket Participant sample weight. Identifies Ticket participants who also appear in the Beneficiary sample.
R2_Clus	Indicates whether the case was in the clustered or unclustered sample. All cases in the Beneficiary sample and Traditional payment Ticket Participant sample are clustered. The Outcomes Only and Milestone and Outcome Participant sample includes both a clustered and unclustered component.

Variable Name	Description
R2_Uncinpsu	Among unclustered cases, indicates whether the case was located in a psu or not. For this variable, "0" indicates either an unclustered case that was not in a psu, or a clustered case.
R2_R1long	Indicates if the SM was in the Round 1, Phase 1 longitudinal sample.
R2_R2cs	Indicates whether or not the case is in the cross-sectional sample. Only participants who were on the frame at Round 2 (participating in TTW in 2004) are in the cross-sectional sample. Longitudinal participants on the frame at Round 1 but not Round 2 are not included.
R2_Frame	Frame=1 if the participant was on the frame at Round 1, whether or not they were selected for the sample at Round 1. Frame=2 if the participant was "new" at Round 2 that is was not on the Round 1 frame but were on the frame at Round 2 (participant in 2004).

Survey Administration Variables

R2_C_Rtype	Indicates whether interview conducted by sample person or proxy. Based on M11.
R2_C_Resptype	Indicates whether the sample person or proxy required assistance from someone else to complete the interview. Based on M12.
R2_C_IntMode	Indicates whether interview conducted via CATI or CAPI.
R2_C_IntAge	Sample member age at interview. Based on date of interview minus self-reported date of birth at A68 or A69.
R2_C_IntDay	Interview day.
R2_C_IntMnth	Interview month.
R2_C_IntYear	Interview year.
R2_Final	Final disposition code
R2_StatusR1R2	Indicates whether or not a sample member was in the sample and interviewed at Round 1.
R2_Fixe2	Longitudinal Case Eligible but Skipped E3 thru E13 at R1, Asked at R2
R2_Fixe11	Longitudinal Case Eligible but Skipped E12 and E13 at R1, Asked at R2
R2_Fixe14	Longitudinal Case Eligible but Skipped E15 thru E18 at R1, Asked at R2
R2_EN2004	This variable indicates if the sample member, at Round 1, was signed up with one or more EN in 2004. R2_EN2004 is used as part of the skip logic in Section E.
R2_ENstmth	This variable indicates what month the sample member reported first using his/her Ticket with the EN(s) he/she was signed up with 2004. R2_ENSTMTH is used with R2_ENSTYR to determine which EN the sample member has been signed up with the longest.

Variable Name	Description
R2_ENstyr	This variable indicates what year the sample member reported first using his/her Ticket with the EN(s) he/she was signed up with 2004. R2_ENSTYR is used with R2_ENSTMTH to determine which EN the sample member has been signed up with the longest.
R2_Prev_Part	This variable indicates if the sample member, at Round 1, reported that they had ever used his/her Ticket to sign up with an Employment Network. R2_Prev_Part is used as part of the skip logic in Section H.
R2_R1E37	This variable indicates if the sample member reported, in Round 1, being signed up with any ENs at any time in 2004. R2_R1E37 is used as part of the skip logic in Section H.
R R2_1E47YR	This variable indicates if the sample member, at Round 1, reported first using his/her Ticket with his/her current EN(s) in 2004. R2_R1E47YR is used as part of the skip logic in Section H.

Weights

R2_wtr2_Ben	Weights created for beneficiary sample analyses.
R2_wtr2_Com	Weights created for combined beneficiary and participant sample analyses.
R2_wtr2cs_Par	Weights created for participant sample analyses.

Section B Variables: Disability and Current Work Status

R2_C_DisAge	Indicates age the sample person became disabled. Based on B18_age and B18_yr.
R2_C_AdultChild_Onset	Indicates whether onset of disability was prior to age 18 or at age 18 and older. Based on B19 and R2_R2_C_Disage.
R2_C_WrkdWhenLim	Indicates whether sample person was working at time became disabled. Based on B22 and R2_R2_C_AdultChildOnset.
R2_C_EvrWorked	Indicates whether sample person ever worked at time of interview. Based on B36, B22, B24, and B30.
R2_C_MainConICD9_1	ICD-9 code assigned to verbatim response to B2 (main reason limited). Note: when an ICD-9 code could not be assigned, a two digit code corresponding to the ICD-9 chapter headings was assigned.
R2_C_MainConDiagGrp_1-_8	ICD-9 diagnosis categories based on verbatim at B2 (physical or mental condition that is main reason limited).
R2_C_MainConColDiagGrp_1-_8	Collapsed ICD-9 diagnosis categories based on verbatim at B2 (physical or mental condition that is main reason limited).
R2_C_MainConBodyGroup_1-_8	ICD-9 body group categories based on verbatim at B2 (main reason limited).
R2_C_SeconICD9_1-_12	ICD-9 code assigned to verbatim at B4 (other physical or mental conditions that limit work or other daily activities can do). Note: when and ICD-9 code could not be assigned, a two digit code corresponding to an ICD-9 chapter heading was assigned.

Variable Name	Description
R2_C_SeconDiagGrp_1-_12	ICD-9 diagnosis categories based on verbatim at B4 (other physical and mental conditions that limit work or daily activities).
R2_C_SeconColDiagGrp_1-_12	Collapsed ICD-9 diagnosis categories based on verbatim at B4 (other physical and mental conditions that limit work or daily activities).
R2_C_SeconBodyGroup_1-_12	ICD-9 body group categories based on verbatim at B4 (other physical or mental conditions that limit work or daily activities).
R2_C_ReasBecEligICD9	ICD-9 code assigned to response indicating main reason eligible for disability benefits. Taken from B6, B12, or B15. Note: when and ICD-9 code could not be assigned, a two digit code corresponding to an ICD-9 chapter heading was assigned.
R2_C_ReasBecEligDiagGrp	ICD-9 diagnosis categories for main reason eligible for disability benefits. Taken from B6, B12, or B15.
R2_C_ReasBecEligColDiagGrp	Collapsed ICD-9 diagnosis categories for main reason eligible for disability benefits. Taken from B6, B12, or B15.
R2_C_ReasBecEligBodyGroup	ICD-9 body group categories for main reason eligible for disability benefits. Taken from B6, B12, or B15.

Section C Variables: Current Employment

R2_C_MainCurJobHrPay	Hourly rate at current main job (pre-tax). Based on C10, C11, C12amt, and C12hop.
R2_C_MainCurJobMnthPay	Monthly pay rate at current main job (pre-tax). Based on C10, C11, C12amt, and C12hop.
R2_C_MainCurJobMnthPayTH	Monthly take home pay from current main job. Based on C10, C11, C13amt, and C13hop.
R2_C_MainCurJobSOC	SOC code assigned to verbatim from C2 (current occupation for main job).
R2_C_MainCurJobNAICS	NAICS code assigned to verbatim at C3 (current industry for main job).
R2_C_MainCurJobRepSSA	Number of months before current job reported to SSA. Based on C5b, C5month, and C5bweek.
R2_C_MnthsMainCurJob	Months employed at current main job. Based on year of interview, C4mth, and C4yr. Computed for each job listed.
R2_C_CurJob2HrPay	Hourly pay at current second job
R2_C_CurJob2MnthPay	Monthly pre-tax pay at current second job.
R2_C_CurJob2MnthPayTH	Monthly take home pay at current second job.
R2_C_CurJob2SOC	SOC code assigned to verbatim from C2 (current occupation for second job).
R2_C_CurJob2NAICS	NAICS code assigned to verbatim at C3 (current industry for second job).
R2_C_CurJob2RepSSA	Number of months before current second job reported to SSA. Based on C5b, C5month, and C5bweek.

Variable Name	Description
R2_C_MnthsCurJob2	Months employed at current second job. Based on year of interview, C4mth, and C4yr.
R2_C_CurJob3HrPay	Hourly pay at current third job
R2_C_CurJob3MnthPay	Monthly pre-tax pay at current third job.
R2_C_CurJob3MnthPayTH	Monthly take home pay at current third job.
R2_C_CurJob3SOC	SOC code assigned to verbatim from C2 (current occupation for third job).
R2_C_CurJob3NAICS	NAICS code assigned to verbatim at C3 (current industry for third job).
R2_C_CurJob3RepSSA	Number of months before current third job reported to SSA. Based on C5b, C5month, and C5bweek.
R2_C_MnthsCurJob3	Months employed at current third job. Based on year of interview, C4mth, and C4yr.
R2_C_CurJob4HrPay	Hourly pay at current fourth job
R2_C_CurJob4MnthPay	Monthly pre-tax pay at current fourth job.
R2_C_CurJob4MnthPayTH	Monthly take home pay at current fourth job.
R2_C_CurJob4SOC	SOC code assigned to verbatim from C2 (current occupation for fourth job).
R2_C_CurJob4NAICS	NAICS code assigned to verbatim at C3 (current industry for fourth job).
R2_C_CurJob4RepSSA	Number of months before current fourth job reported to SSA. Based on C5b, C5month, and C5bweek.
R2_C_MnthsCurJob4	Number of months before current fourth job reported to SSA. Based on C5b, C5month, and C5bweek.
R2_C_TotCurMnthPay	Total current monthly pay from all jobs combined. Summary of currently monthly pay variables.
R2_C_TotCurWkHrs	Total number of hours work per week on all current jobs combined. Based on summary of C8 for all jobs listed.
R2_C_TotCurHrMnth	Total number of hours worked per month on all jobs combined. Based on summary of C8 for all jobs listed.
R2_C_CurMnthEquipExp	Total current monthly expenses for equipment that helps work. Based on amount self/family pays reported in C26amt and C26hop.
R2_C_CurMnthPASExp	Total current monthly expenses for personal assistance services that help work. Based on amount self/family pays reported in C31amt and C31hop.
R2_C_TotCurEquipPASExp	Total expenses for equipment and personal assistance services that help work combined. Based on summary of R2_C_MnthEquipExp and R2_C_MnthPASExp.
R2_C_totcurmthpay_high	Flags cases where total monthly pay is higher than \$10,000.
R2_C_totcurmthpay_low	Flags cases where total monthly pay is less than \$20 a month.

Variable Name	Description
Section D Variables: Jobs/Other Jobs During 2004	
R2_Main_Job_grid_num	Indicates which job is listed as 2004 main job.
R2_C_job_from_SecR2_C_1	Indicates which current job from section C has been copied over to job 1 in list of jobs held during 2004.
R2_C_job_from_SecR2_C_2	Indicates which current job from section C has been copied over to job 2 in list of jobs held during 2004.
R2_C_job_from_SecR2_C_3	Indicates which current job from section C has been copied over to job 3 in list of jobs held during 2004.
R2_C_job_from_SecR2_C_4	Indicates which current job from section C has been copied over to job 4 in list of jobs held during 2004.
R2_C_Totjobcopied	Total Number of Jobs Copied from C to D
R2_C_Main_job_grid_num	Job Number of 2004 Main Job
R2_C_MainJobHrPay2004	Hourly pay for main job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_MainJobMnthPay2004	Monthly pay for main job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_MainJobMnthPayTH2004	Monthly take home pay for main job in 2004. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_MainJob2004SOC	SOC code assigned to verbatim at D4 (occupation at main job in 2004).
R2_C_MainJob2004NAICS	NAICS code assigned to verbatim at D5 (industry for main job in 2004).
R2_C_MnthsMain2004Job	Months employed at main job in 2004. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job1HrPay2004	Hourly pay for first job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job1MnthPay2004	Monthly pay for first job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job1MnthPayTH2004	Monthly take home pay for first job in 2004. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job12004NAICS	SOC code assigned to verbatim at D4 (occupation at first job in 2004).
R2_C_Job12004SOC	NAICS code assigned to verbatim at D5 (industry for first job in 2004).
R2_C_MnthsJob12004	Months employed at first job in 2004. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.

Variable Name	Description
R2_C_Job2HrPay2004	Hourly pay for second job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job2MnthPay2004	Monthly pay for second job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job2MnthPayTH2004	Monthly take home pay for second job in 2004. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job22004NAICS	SOC code assigned to verbatim at D4 (occupation at second job in 2004).
R2_C_Job22004SOC	NAICS code assigned to verbatim at D5 (industry for second job in 2004).
R2_C_MnthsJob22004	Months employed at second job in 2004. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job3HrPay2004	Hourly pay for third job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job3MnthPay2004	Monthly pay for third job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job3MnthPayTH2004	Monthly take home pay for third job in 2004. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job32004NAICS	SOC code assigned to verbatim at D4 (occupation at third job in 2004).
R2_C_Job32004SOC	NAICS code assigned to verbatim at D5 (industry for third job in 2004).
R2_C_MnthsJob32004	Months employed at third job in 2004. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job4HrPay2004	Hourly pay for fourth job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job4MnthPay2004	Monthly pay for fourth job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job4MnthPayTH2004	Monthly take home pay for fourth job in 2004. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job42004NAICS	SOC code assigned to verbatim at D4 (occupation at fourth job in 2004).
R2_C_Job42004SOC	NAICS code assigned to verbatim at D5 (industry for fourth job in 2004).
R2_C_MnthsJob42004	Months employed at fourth job in 2004. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.

Variable Name	Description
R2_C_Job5HrPay2004	Hourly pay for fifth job in 2004 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job5MnthPay2004	Monthly pay for fifth job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job5MnthPayTH2004	Monthly take home pay for fifth job in 2004. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Job52004NAICS	SOC code assigned to verbatim at D4 (occupation at fifth job in 2004).
R2_C_Job52004SOC	NAICS code assigned to verbatim at D5 (industry for fifth job in 2004).
R2_C_MnthsJob52004	Months employed at fifth job in 2004. Based on D6mth and D8mth. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_Tot2004Pay	Total monthly pay for all jobs combined in 2004. Summary of monthly pay variables for each 2004 job listed. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_TotMnths2004	Total months worked in 2004 at all jobs combined. Summary of months at 2004 job variables for each 2004 job listed. Includes current jobs mentioned in section C that are not repeated in section D.
R2_C_UsWkHr2004	Usual weekly hours worked in 2004. Based on total hours worked in 2004 and number of weeks worked in 2004 for all jobs.
R2_C_TotHrs2004	Total hours worked in 2004. Summary of hours*weeks worked for all jobs in 2004.

Section E Variables: Awareness of SSA Work Incentive Programs and Ticket to Work

R2_C_AwareTTW	Indicator that sample person is aware of the Ticket to Work program. Based on E21, E22, and E25.
R2_C_InvolNonPartAtmpt	Indicates that sample person is not participating in TTW, but has tried to use ticket with an EN or SVRA. Based on F13, F15, F22, and F24.
R2_C_InvolNonPartNoAtmpt	Indicates that sample person is not participating in TTW and has received information about TTW but has not tried to contact an EN or SVRA. Based on F4, F12, F20, and F29.
R2_C_InvolNonPartAll	Summary of all involuntary non-participants, including those who have tried and those who have not tried to use their tickets. Based on R2_C_InvolNonPartAtmpt and R2_C_InvolNonPartNoAtmpt.

Section G: Employment-Related Services and Supports Used in 2004

R2_C_EvrUseSVR	Indicates that sample member has received employment services or job training from a State Vocational Rehabilitation Agency. Based on G9 and G14.
R2_C_EvrUseWel	Indicates that sample person has received employment services or job training from a welfare agency. Based on G9 and G14.

Variable Name	Description
R2_C_EvrUseSMenH	Indicates that sample person has received employment services or job training from a state mental health agency. Based on G9 and G14.
R2_C_EvrUseOStat	Indicates that sample person has received employment services or job training from another state agency. Based on G9 and G14.
R2_C_EvrUsePriv	Indicates that sample person has received employment services or job training from a private business. Based on G7 and G13.
R2_C_EvrUseOth	Indicates that sample person has received employment services or job training from another type of place. Based on G7 and G13.
R2_C_EvrUseSchool	Indicates that sample person has received employment services or job training from a school or university (Note that this category was created based on responses to "some other type of place").
R2_C_EvrUseUnemploy	Indicates that sample person has received employment services or job training from an unemployment agency (Note that this category was created based on responses to "some other type of place").
R2_C_EvrUseClinic	Indicates that sample person has received medical or mental health services from a clinic, hospital, or doctor's office.
R2_C_EvrUseRehab	Indicates that sample person received medical or mental health services from a rehabilitation center (Note that this category was created based on responses to "some other type of place").
R2_C_EvrUseOthMed	Indicates that sample person received medical or mental health services from an other type of place.
R2_C_EmpProvUnkwn	Indicates that provider of employment and job training services was unknown.
R2_C_MedProvUnkwn	Indicates that provider of medical and mental health services was unknown.
R2_C_EvrUsedServ	Indicates that sample member has used one or more of the services indicated at Gx, Gx0, Gx5, and Gx9.
R2_C_EvrUseEmploy	Indicates that sample person has used employment services from any provider. Based on G1, G36_h, G36_I, or G36_k.
R2_C_NumProvEvUsed	Number of providers sample person has used for employment-related services. Based on count of providers from de-duplicated list at G32.
R2_C_NumProv2004	Number of providers sample person used for employment related services in 2004. Based on count of de-duplicated providers from list at G32, G33, and G35.
R2_C_UseSVR2004	Indicates that sample person received employment services or job training from an SVR in 2004.
R2_C_UseWEL2004	Indicates that sample person received employment services or job training from a welfare agency in 2004.
R2_C_UseSMenH2004	Indicates that sample person received employment services or job training from a state mental health agency in 2004.
R2_C_UseOthSt2004	Indicates that sample person received employment services or job training from another state agency in 2004.

Variable Name	Description
R2_C_UsePriv2004	Indicates that sample person received employment services or job training from a private business in 2004.
R2_C_UseOthNonSt2004	Indicates that sample member received employment or job training services from another non state provider in 2004.
R2_C_UseSchool2004	Indicates that sample member received employment services or job training at a school in 2004.
R2_C_UseUnemp2004	Indicates that sample member received employment services or job training from an unemployment agency in 2004.
R2_C_UseClinic2004	Indicates that sample member received medical or mental health services at a clinic, hospital, or doctor's office in 2004.
R2_C_UseRehab2004	Indicates that sample member received medical or mental health services at a rehabilitation center in 2004.
R2_C_UseOthMed2004	Indicates that sample member received medical or mental health services from another type of place in 2004.
R2_C_EmpUnkwn2004	Indicates that provider type was unknown for employment and job training services received in 2004.
R2_C_MedUnkwn2004	Indicates that provider type was unknown for medical and mental health services received in 2004.
R2_C_ServUse2004	Indicates that sample member used one or more services (G1, G10, G15, G19) in 2004.
R2_C_PhyTh2004	Indicates that sample member received physical therapy from any provider in 2004.
R2_C_OccTher2004	Indicates that sample member received occupational therapy from any provider in 2004.
R2_C_SpchTher2004	Indicates that sample member received speech therapy from any provider in 2004.
R2_C_MedProc2004	Indicates that the sample member received a medical procedure from any provider in 2004.
R2_C_Equip2004	Indicates that sample member received special equipment or devices from any provider in 2004.
R2_C_Coun2004	Indicates that sample member received personal counseling or therapy from any provider in 2004.
R2_C_GrpTh2004	Indicates that sample member received group therapy from any provider in 2004.
R2_C_WrkAs2004	Indicates that sample member received a work or job assessment from any provider in 2004.
R2_C_FindJob2004	Indicates that sample member received help finding a job from any provider in 2004.
R2_C_JobTrn2004	Indicates that sample member received training to learn a new job or skill from any provider in 2004.

Variable Name	Description
R2_C_JobMod2004	Indicates that sample member received advice about modifying his/her job or work place from any provider in 2004.
R2_C_JobCch2004	Indicates that sample member received on-the-job training, job coaching, or support services from any provider in 2004.
R2_C_OtherServ2004	Indicates that sample member received any other services at G36 from any provider in 2004.
R2_C_TotSerCost2004	Total annual out-of-pocket costs for 2004 services across all providers. Summary of amount paid by self/family per week*number of provider contacts for all providers received services from in 2004.
R2_C_TotMoneyENS2004	Total money received from ENs in 2004 across all services (logical zero filled if G50=L). Summary of amount provided by all ENs signed up with in 2004 (reported in G50_Tweek, G5x_weeks, G50T_months, G5x_months, or G50_T2004).
R2_C_ProvType2004_1-_34	Type of provider received services from in 2004 (Prov n).
R2_C_PhyTh2004_1-_34	Indicates received physical therapy from Provider n in 2004.
R2_C_OccTh2004_1-_34	Indicates received occupational therapy from Provider n in 2004.
R2_C_SpchTh2004_1-_34	Indicates received speech therapy from Provider n in 2004.
R2_C_Med2004_1-_34	Indicates received medical procedure from Provider n in 2004.
R2_C_Equip2004_1-_34	Indicates received special equipment or devices from Provider n in 2004. Based on G36.
R2_C_Coun2004_1-_34	Indicates received personal counseling or therapy from Provider n in 2004. Based on G36.
R2_C_GrpTh2004_1-_34	Indicates received group therapy from Provider n in 2004. Based on G36.
R2_C_WrkAs2004_1-_34	Indicates received work assessment from Provider n in 2004.
R2_C_FndJob2004_1-_34	Indicates received help finding a job from Provider n in 2004. Based on G36.
R2_C_JobTrn2004_1-_34	Indicates received training to learn new job or skill from Provider n in 2004.
R2_C_JobMd2004_1-_34	Indicates received advice about modifying job from Provider n. Based on G36.
R2_C_JobCch2004_1-_34	Indicates received job training from Provider n in 2004. Based on G36.
R2_C_Othr2004_1-_34	Indicates received other service from Provider n in 2004.
R2_C_DurProvVisit_1-_34	Duration in hours of visit with Provider n.
R2_C_NumProvCont_1-_34	Number of contacts with Provider n.
R2_C_ProvUse2004_1-_34	Rating of usefulness of services received from Provider n in 2004.
R2_C_TickSerInd_1-_34	Indicator of whether services received from Provider n during 2004 were provided or arranged by an EN while the Ticket was assigned to the EN. Based on G42-G44.

Variable Name	Description
R2_C_TickSer2004	Indicator of whether services received from any provider during 2004 were provided or arranged by an EN while the Ticket was assigned to the EN. Based on G42-G44.
R2_C_SelfFamPayServ_1-_34	Self or family paid for employment related services received from Provider n in 2004. Based on G45 and G46.
R2_C_ProvPayServ_1-_34	Provider paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_NoonePayServ_1-_34	No one paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_InsurPayServ_1-_34	Health insurance paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_ENPayServ_1-_34	EN paid for employment related services received from Provider n in 2004 . Based on G45.
R2_C_MedicarePayServ_1-_34	Medicare paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_MedicaidPayServ_1-_34	Medicaid paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_EmplyPayServ_1-_34	Employer paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_NonprofPayServ_1-_34	Non-profit organization serving people with disabilities paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_WorkCompPayServ_1-_34	Workers' compensation paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_DisInsurPayServ_1-_34	Disability insurance paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_OtherPayServ_1-_34	Other paid for employment related services received from Provider n in 2004. Based on G45.
R2_C_SchoolPayServ_1-_34	School paid for employment related services received from Provider n in 2004 (note that this category was created to categorized other/specify response to "other" paid for services). Based on G45.
R2_C_AgencyPayServ_1-_34	Agency paid for employment related services received from Provider n in 2004 (note that this category was created to categorized other/specify response to "other" paid for services). Based on G45.
R2_C_SerCost2004_1-_34	Annual out-of-pocket costs for 2004 services received from Provider n. Based on amount paid by self/family per week*number of provider contacts in 2004.
R2_C_ProvType2004_01_n	Indicates that a SVR was a provider in 2004 (where n=number of provider).
R2_C_ProvType2004_02_n	Indicates that a Welfare agency was a provider in 2004.
R2_C_ProvType2004_03_n	Indicates that a Mental Health agency was a provider in 2004.
R2_C_ProvType2004_04_n	Indicates that a welfare agency, other non-state, or unemployment office was a provider in 2004.

Variable Name	Description
R2_C_ProvType2004_05_n	Indicates that a private business was a provider in 2004.
R2_C_ProvType2004_06_n	Indicates that another non-state agency was a provider in 2004.
R2_C_ProvType2004_07_n	Indicates that a school was a provider in 2004.
R2_C_ProvType2004_08_n	Indicates that an employment office was a provider in 2004.
R2_C_ProvType2004_09_n	Indicates that provider type was unknown for a provider of employment/training services in 2004.
R2_C_ProvType2004_10_n	Indicates that a clinic/hospital/MD was a provider in 2004.
R2_C_ProvType2004_11_n	Indicates that a rehabilitation treatment center was a provider in 2004.
R2_C_ProvType2004_12_n	Indicates that another medical provider was a provider in 2004.
R2_C_ProvType2004_13_n	Indicates that provider type was unknown for a provider of medical/mental health services in 2004.
R2_C_Phyth2004_x_n	Indicates received physical therapy in 2004 from provider type x (where n=number of provider).
R2_C_Occth2004_x_n	Indicates received occupational therapy in 2004 from provider type x.
R2_C_Spchth2004_x_n	Indicates received speech therapy in 2004 from provider type x.
R2_C_Med2004_x_n	Indicates received medical procedure in 2004 from provider type x.
R2_C_Equip2004_x_n	Indicates received special equipment in 2004 from provider type x.
R2_C_Coun2004_x_n	Indicates received personal counseling in 2004 from provider type x.
R2_C_Grpth2004_x_n	Indicates received group therapy in 2004 from provider type x.
R2_C_WrkAs2004_x_n	Indicates received work assessment in 2004 from provider type x.
R2_C_FndJob2004_x_n	Indicates received help to find a job in 2004 from provider type x.
R2_C_JobTrn2004_x_n	Indicates received job training in 2004 from provider type x.
R2_C_JobMd2004_x_n	Indicates received advice about modifying work place in 2004 from provider type x.
R2_C_JobCch2004_x_n	Indicates received job coaching in 2004 from provider type x.
R2_C_Othr2004_x_n	Indicates received something else in 2004 from provider type x.
R2_C_NumProvCont_x_n	Indicates number provider contacts in 2004 from provider type x.
R2_C_ProvUse2004_x_n	Indicates usefulness of services received in 2004 from provider type x.
R2_C_DurProVisit_x_n	Indicates duration of provider visits in 2004 from provider type x.
R2_C_ProvPayServ_x_n	Indicates that provider paid for services received in 2004 from provider type x.
R2_C_NoOnePayServ_x_n	Indicates that no one paid for services received in 2004 from provider type x.
R2_C_SelfFamPayServ_x_n	Indicates that self/family paid for services received in 2004 from provider type x.

Variable Name	Description
R2_C_EnPayServ_x_n	Indicates that EN paid for services received in 2004 from provider type x.
R2_C_MedicarePayServ_x_n	Indicates that Medicare paid for services received in 2004 from provider type x.
R2_C_MedicaidPayServ_x_n	Indicates that Medicaid paid for services received in 2004 from provider type x.
R2_C_EmplnPayServ_x_n	Indicates that employer paid for services received in 2004 from provider type x.
R2_C_NonProfPayServ_x_n	Indicates that non-profit paid for services received in 2004 from provider type x.
R2_C_WorkCompPayServ_x_n	Indicates that Worker's Comp paid for services received in 2004 from provider type x.
R2_C_DisInsurPayServ_x_n	Indicates that Disability Insurance paid for services received in 2004 from provider type x.
R2_C_OtherPayServ_x_n	Indicates that other paid for services received in 2004 from provider type x.
R2_C_AgencnPayServ_x_n	Indicates that other agency paid for services received in 2004 from provider type x.
R2_C_InsurPayServ_x_n	Indicates that health insurance paid for services received in 2004 from from provider type x.
R2_C_SchoolPayServ_x_n	Indicates that school paid for services received in 2004 from provider type x.
R2_C_SerCost2004_x_n	Cost of services received in 2004 from provider type x.
Section I: Health and Functional Status	
R2_C_EquipFuncLim	Sample member uses equipment/device for any functional/sensory/communication limitation including seeing, hearing, speaking, or walking. Based on I19, I23, I27, and I31.
R2_C_NumSenLim	Number of sensory/communication limitations reported including difficulty seeing, hearing, or speaking. Based on I17, I21, and I25.
R2_C_NumSevSenLim	Number of severe sensory/communication limitations reported including inability to see, hear, or speak at all. Based on I18, I22, and I26.
R2_C_NumPhyLim	Number of physical functional limitations reported including difficulty walking, climbing, lifting, grasping, reaching, standing, or stooping. Based on I29, I33, I35, I39, I41, and I43.
R2_C_NumSevPhyLim	Number of severe physical functional limitations reported including inability to walk, climb, lift, grasp, reach, stand, or stoop at all. Based on I30, I34, I36, I38, I40, I42, and I44.
R2_C_NumEmotLim	Number of emotional/social limitations including trouble concentrating, coping with stress, and getting along with others. Based on I59, I60, and I61
R2_C_NumADLs	Number of Activity of Daily Living tasks report difficulty with including getting around home, getting into and out of bed, difficulty bathing, and difficulty eating. Based on I45, I49, I51, and I57.

Variable Name	Description
R2_C_NumADLAssist	Number of Activity of Daily Living tasks require assistance with including getting around home, getting into and out of bed, bathing, and eating. Based on I46, I50, I52, and I58.
R2_C_NumIADLs	Number of Instrumental Activities of Daily Living tasks report difficulty with including getting around outside home, shopping, and preparing meals. Based on I47, I53, and I55.
R2_C_NumIADLAssist	Number of Instrumental Activities of Daily Living tasks require assistance with including getting around outside home, shopping, and preparing meals. Based on I48, I54, and I56.
R2_C_MCSBP	SF-8 Mental (MCS-8) Weight for Bodily Pain.
R2_C_MCSGH	SF-8 Mental (MCS-8) Weight for General Health.
R2_C_MCSMH	SF-8 Mental (MCS-8) Weight for Mental Health.
R2_C_MCSPF	SF-8 Mental (MCS-8) Weight for Physical Functioning.
R2_C_MCSRE	SF-8 Mental (MCS-8) Weight for Role Emotional.
R2_C_MCSR	SF-8 Mental (MCS-8) Weight for Role Physical.
R2_C_MCSSF	SF-8 Mental (MCS-8) Weight for Social Functioning.
R2_C_MCSVT	SF-8 Mental (MCS-8) Weight for Vitality.
R2_C_PCSBP	Physical (PCS-8) Weights for Bodily Pain.
R2_C_PCSGH	Physical (PCS-8) Weights for General Health.
R2_C_PCSMH	Physical (PCS-8) Weights for Mental Health.
R2_C_PCSPF	Physical (PCS-8) Weights for Physical Functioning.
R2_C_PCSRE	Physical (PCS-8) Weights for Role Emotional.
R2_C_PCSR	Physical (PCS-8) Weights for Role Physical.
R2_C_PCSSF	Physical (PCS-8) Weights for Social Functioning.
R2_C_PCSVT	Physical (PCS-8) Weights for Vitality.
R2_C_SF8GH	SF-8 general health scale value. Based on I1.
R2_C_SF8PF	SF-8 physical functioning scale value. Based on I2.
R2_C_SF8RP	SF-8 role physical scale value. Based on I3.
R2_C_SF8BP	SF-8 bodily pain scale value. Based on I4.
R2_C_SF8VT	SF-8 vitality scale value. Based on I5.
R2_C_SF8SF	SF-8 social functioning scale value. Based on I6.
R2_C_SF8MH	SF-8 mental health scale value. Based on I7.
R2_C_SF8RE	SF-8 role emotional scale value. Based on I8.

Variable Name	Description
R2_C_PCS8TOT	SF-8 standardized aggregate summary physical health score (higher scores are indicative of better health). Based on R2_C_PCSEGH, R2_C_PCSEPF, R2_C_PCSR, R2_C_PCSBP, R2_C_PCSVT, R2_C_PCSSF, R2_C_PCSMH, and R2_C_PCSRE.
R2_C_MCS8TOT	SF-8 standardized aggregate mental health summary score (higher scores are indicative of better health). Based on R2_C_MCSGH, R2_C_MCSPF, R2_C_MCSR, R2_C_MCSBP, R2_C_MCSVT, R2_C_MCSSF, R2_C_MCSMH, R2_C_MCSRE.
R2_C_CAGEAlcohol	Summary of affirmative responses to CAGE items: I62-I65 (higher scores are indicative of greater alcohol dependence).
R2_C_DrugDep	Summary of drug dependence items: I72-I76 (higher scores are indicative of greater drug dependence)
Section J: Health Insurance	
R2_C_CurMedicare	Currently covered by Medicare. Based on response to J1 or J9_2.
R2_C_CurMedicaid	Currently covered by Medicaid. Based on response to J2 or J9_1.
R2_C_CurMilInsur	Currently covered by military insurance. Based on response to J4 or J9_3.
R2_C_CurIndInsur	Currently covered by Indian Health Insurance. Based on response to J9_4.
R2_C_CurMedigap	Currently covered by Medi-Gap. Based on response to J9_5.
R2_C_CurStAssist	Currently covered by State program. Based on response to J9_6.
R2_C_CurPrivEmp	Currently covered by private insurance through own employer. Based on response to J6 or J9_7.
R2_C_CurPrivSp	Currently covered by private insurance through spouse/partner/parent. Based on response to J6 or J9_8.
R2_C_CurPrivSelf	Currently covered by private insurance paid for by self/family. Based on response to J6 or J9_9.
R2_C_CurOtherInsur	Currently covered by other plan. Coded "yes" if report coverage associated with Indian Health Service, Medi-Gap, State program, or other plan.
R2_C_CurNoInsur	Currently not covered by any insurance. Coded "yes" if J8=1 or no insurance coverage mentioned in J9.
Section K: Income and Other Assistance	
R2_C_LstMnthPay	Last month pay (pre-tax). Based on K3 (logical zero coded if K3=L).
R2_C_AmtPrivDis	Amount received from Private Disability last month. Based on K6 (logical zero coded if K6_a=0).
R2_C_AmtWorkComp	Amount received from Workers' Compensation last month. Based on K6 (logical zero coded if K6_b=0).
R2_C_AmtVetBen	Amount received from Veterans' Benefits last month. Based on K6 (logical zero coded if K6_c=0).

Variable Name	Description
R2_C_AmtPubAssis	Amount received from public assistance or welfare payments last month. Based on K6 (logical zero coded if K6_d=0).
R2_C_AmtUnemploy	Amount received from Unemployment benefits last month. Based on K6 (logical zero coded if K6_e=0).
R2_C_AmtPrivPen	Amount received from Private Pensions or government pensions last month. Based on K6 (logical zero coded if K6_f=0).
R2_C_AmtOthReg	Amount received from other sources not on a regular basis last month. Based on K6 (logical zero coded if K6_g=0).
R2_C_AmtOthRegSum	Amount from all sources received on regular basis last month. Summary of R2_C_AmtOthReg, R2_C_AmtPrivDis, R2_C_AmtWorkComp, R2_C_AmtVetBen, R2_C_AmtPubAssis, R2_C_AmtUnemploy, R2_C_AmtPrivPen, and income received from Social Security last month (R2_N_TotSSbenLastMnth) (imputed values).
R2_C_AmtOthNonReg	Amount received from other sources not on a regular basis last month. Based on K6 (logical zero coded if K6_h=0).
R2_C_AmtFoodStamp	Amount received from Food Stamps last month. Based on K12 (logical zero coded if K11=0).
R2_C_AmtOthgov	Amount received from any other government program last month. Based on K15 (logical zero coded if K13=0).
R2_C_TotGovCashBen	Total government cash benefits received. Summary of R2_C_AmtVetBen, R2_C_AmtPubAssis, and R2_N_TotSSbenLastMnth (imputed values).
R2_C_TotNonCashBen	Total non-cash benefits received. Summary of R2_C_AmtFoodStamp, and R2_C_AmtOthGov.

Section L: Sociodemographic Information

R2_C_Race	Race categories. Based on L2.
R2_C_BMI	Body Mass Index score. Based on L6ft, L6in, and L7.
R2_C_BMI_cat	Body Mass Index categories. Based on R2_C_BMI.
R2_C_Hhsize	Household size. Based on L11, L16, and L17.
R2_C_NumChildhh	Total number of children in household. Based on L17.
R2_C_NumChildohh	Total number of children outside household. Based on L20.
R2_C_NumChildren	Total number of children. Summary of R2_C_NumChildhh and R2_C_NumChildohh.
R2_C_Numchildhh_pov	Total number of children calculated for use in Federal Poverty Index. Coded as "0" if live in group quarters. If live with un-related others, counts own children only.
R2_C_FedPovertyLevel	Percent of federal poverty threshold relative to number of people in household for 2004. Based on Census Bureau 2004 thresholds.
R2_C_HhInc2004	Total household income in 2004. Based on L23Ahop and L23Aamt.

Variable Name	Description
R2_C_Cohab	Indicates that sample member lives with spouse or partner. Based on L8, L9, and L10.
SSA Administrative Variables	
R2_OrgSampInfo_PrimDiagT16	SSA impairment code. From SSA administrative records.
R2_OrgSampInfo_PrimDiagT2	SSA impairment code. From SSA administrative records.
R2_OrgSampInfo_SecDiagT16	SSA impairment code. From SSA administrative records.
R2_OrgSampInfo_SecDiagT2	SSA impairment code. From SSA administrative records.
R2_OrgSampInfo_hispanic	Indicates whether sample member hispanic or non-hispanic. Based on ethnicity from SSA administrative records.
R2_OrgSampInfo_race	Race of sample member. From SSA administrative records.
R2_OrgSampInfo_Sex	Sex of Sample member. From SSA administrative records.
R2_SVRA	State Vocational Rehabilitation Switch
R2_N_SSIlastMnth	SSI Benefit Paid month before interview
R2_N_DepenLastMnth	Dependent Payment Amount month before interview
R2_N_SSDIlastMnth	Federal SSDI Benefit Paid month before interview
R2_N_TotSSbenLastMnth	Total Benefits for the Month Before the Interview date
R2_N_BenAbsOfEarn_Atint	Benefits in the absence of earnings at interview. Based on FAMTyymm, SAMTyymm, EICMyymm, DBENyymm.
R2_N_Depen_Atint	SSA dependent benefit amount at interview. Based on PBENyymm.
R2_N_MCAID_Atint	SSI Medicaid Eligibility Status At time of Interview (based on SSA admin data)
R2_N_MCARE_Atint	SSDI Medicare Eligibility Status at time of Interview (based on SSA admin data)
R2_N_MnthsLngstTTWProv2004	Months with longest TTW provider in 2004
R2_N_NumTTWProv2004	Total number of TTW providers in 2004
R2_N_SSDI_Atint	Federal SSSDI Benefit Paid at interview. Based on DBENyymm.
R2_N_SSI_Atint	State and Federal SSI Benefit Paid month at interview. Based on SBENyymm
R2_N_TTWMnthsAssgnTkt	Number of months since TTW ticket first assigned
R2_N_TTWPpart2002	TTW Participant in year 2002. Based on active Moyymm.
R2_N_TTWPpart2004	TTW Participant in year 2004. Based on active Moyymm.
R2_N_TTWPpart2004	TTW Participant in year 2004. Based on active Moyymm.
R2_N_TTWPpart2005	TTW Participant in year 2005. Based on active Moyymm.

Variable Name	Description
R2_N_TTWPartEver	By time of Interview, TTW Participant ever. Based on active_MOyymm.
R2_N_TTWPart_Atint	TTW participant at interview
R2_N_TTWpmtTypLngst2004	Longest TTW PAYMENT type by end of 2004 for TTW participants as indicated by flagparti. Based on provtypen, tktpmttypn, TktAsgnDdtn, tktUnasgDtn.
R2_N_TTWProvTypLngst2004	Longest TTW Provider type by end of 2004 for TTW participants as indicated by flagparti. Based on provtypen, tktpmttypn, TktAsgnDdtn, tktUnasgDtn.
R2_N_TTWElig_Atint	TTW eligibility at month of interview
R2_N_TTWMailed_Atint	TTW ticket mailed prior to (month before) interview month
R2_N_TTWMnthstktMail	Months from TTW ticket mail month until interview date
R2_N_TTWMonEnrl03	Number of months enrolled in TTW in 2004
R2_N_TTWMonEnrl04	Number of months enrolled in TTW in 2004
R2_N_TTWMonEnrl05	Number of months enrolled in TTW in 2005
R2_N_TTWMonEnrl_Atint	As of interview month, number of months enrolled in TTW. Based on active_MOyymm.
R2_N_TTWUnAssignDate_Atnt	For former TTW participants (as of interview), last ticket unassignment date
R2_N_TotSSBen_Atint	Total Benefits at Interview date
R2_N_BenStatAtint2	Beneficiary status at Interview, if missing then at samp info used. Based on SSI0402-SSI0410, SSDI0402-SSDI410
R2_N_SSDINoMcr_Atint	SSDI no Medicare at Interview. Based on SSDI0402-SSDI410, medr0402-medr410.
R2_N_MthsEarlEnt	Months since earliest SSI or SSDI entitlement date by time of interview. Based on DOEI, MINGRD, T2begspan1-T2begspan12, T16begspan1-T16begspan22
R2_N_MthsRecent	Months since most recent SSI or SSDI entitlement date by time of interview. Based on DOEI, maxelgrd, T2begspan1-T2begspan12, T16begspan1-T16begspan22
R2_N_FipsAtint	FIPS (State and County) code at Interview
R2_N_EpeAtint	EPE in survey month
R2_N_PiaAtint	Primary Insurance Amount (PIA) at Interview. Based on PIA1-PIA50, PIED1-PIED50.

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

**VARIABLES DROPPED OR REPLACED ON PUBLIC USE FILE AND REASON
FOR DROP/REPLACEMENT**

APPENDIX H

VARIABLES DROPPED OR REPLACED ON PUBLIC USE FILE AND REASON FOR DROP/REPLACEMENT

Variable	Label	File Status	Reasons for Drop/Replace
R2_FINAL	Final Status Code	DROP	Survey administration variable
R2_LINKID	Caseid	DROP	Possible identifier when longitudinal files merged
R2_LASTDATE	Interview Date	DROP	Survey administration variable
R2_C_INTMnth	Month of Interview	DROP	Survey administration variable
R2_C_INTDAY	Day of Interview	DROP	Survey administration variable
R2_C_INTYEAR	Year of Interview	DROP	Survey administration variable
R2_C_INTMODE	Interview Mode	DROP	Survey administration variable
R2_INTERVIEWLANGUAGE	Interview Language	DROP	Survey administration variable
R2_ORGSAMPINFO_DOB	Sample Date of Birth	DROP	Unique identifier
R2_C_INTAGE	Age at Interview	REPLACE	Possible identifier. Use C_INTAGE_PUB
R2_ORGSAMPINFO_SSIDATE	Sample Date First Recieved SSI Benefits	DROP	Survey administration variable
R2_ORGSAMPINFO_SDATE	Date Sample Frame Pulled	DROP	Survey administration variable
R2_ORGSAMPINFO_SSIAGE	Sample Age First Recieved SSI Benefits	DROP	Survey administration variable
R2_ORGSAMPINFO_PSU	Sample PSU	DROP	Contains geographic information. Have A_PSU_PUB
R2_ORGSAMINFO_PHASE	Sample Phase	DROP	Contains geographic information. USE A_strata.
R2_ORGSAMPINFO_RELEASE	Sample Release Number	DROP	Survey administration variable
R2_ORGSAMPINFO_HISPANIC	Sample Hispanic or Non-Hispanic	DROP	Possible identifier.
R2_ORGSAMPINFO_AGE	Sample Age	DROP	Possible identifier. Have age at interview construct
R2_ORGSAMPINFO_RACE	Sample Race	DROP	Possible identifier. Have survey race construct (C_RACE_I_PUB)
R2_ORGSAMPINFO_PRIMDIAGT16	PRIMARY DIAGNOSIS-T16	DROP	SSA administrative data
R2_ORGSAMPINFO_SECDIAGT16	SECONDARY DIAGNOSIS-T16	DROP	SSA administrative data
R2_ORGSAMPINFO_PRIMDIAGT2	PRIMARY DIAGNOSIS-T2	DROP	SSA administrative data
R2_ORGSAMPINFO_SECDIAGT2	SECONDARY DIAGNOSIS-T2	DROP	SSA administrative data
R2_C_COHORT	Beneficiary Age Cohort	DROP	Possible identifier. Have age at interview construct (C_INTAGE_PUB). Strata information available in A_Strata.
R2_ORGSAMPINFO_TSTATUS	Participant or Beneficiary Sample Member	DROP	Ticket participant identifier.
R2_A_PSU	Analytical PSU	REPLACE	Geographic information. Use A_PSU_PUB
R2_FLAGPARTI	Participant in Round 1 Phase 1 Frame	DROP	Use d in creation of combined weight
R2_Wtr2cs_Par	Final Participant Weight	DROP	Ticket participant identifier
R2_Wtr2_Com	Combined Weight	DROP	Ticket participant identifier
R2_Clus	Sample Member in Clustered Sample	DROP	Survey administration variable
R2_Uncinpsu	Sample Member In Unclustered Sample in PSU	DROP	Survey administration variable
R2_R1long	Round 1 Longitudinal Sample Member	DROP	Survey administration variable
R2_StatusR1R2	Response status - Round 1 and Round 2	DROP	Survey administration variable
R2_R2cs	Round 2 Cross-Sectional Sample Member	DROP	Survey administration variable
R2_Frame	Sample Frame Identifier	DROP	Survey administration variable
R2_FIXE2	Longitudinal Case Eligible but Skipped E3 thru E13 at R1, Asked at R2	DROP	Survey administration variable
R2_FIXE11	Longitudinal Case Eligible but Skipped E12 and E13 at R1, Asked at R2	DROP	Survey administration variable

Variable	Label	File Status	Reasons for Drop/Replace
R2_FIXE14	Longitudinal Case Eligible but Skipped E15 thru E18 at R1, Asked at R2	DROP	Survey administration variable
R2_EN2004	Signed up with an EN at any time in 2004 (from R1 data)	DROP	Preloaded data from Round 1
R2_ENSTMTH	Month first signed up with 2004 EN (from R1 data)	DROP	Preloaded data from Round 1
R2_ENSTYR	Year first signed up with 2004 EN (from R1 data)	DROP	Preloaded data from Round 1
R2_PREV_PART	Ever used Ticket to sign up with an EN (from R1 data)	DROP	Preloaded data from Round 1
R2_R1E37	Signed up with EN in 2004 (from R1 data)	DROP	Preloaded data from Round 1
R2_R1E47YR	Year first used ticket with 2004 EN (from R1 data)	DROP	Preloaded data from Round 1
R2_SVRA	SVRA Switch	DROP	Survey administration variable
R2_A68	Reported Month of Birth	DROP	Unique Identifier
R2_A68A	Reported Day of Birth	DROP	Unique Identifier
R2_A68B	Reported Year of Birth	DROP	Unique Identifier
R2_A69	Reported Age	DROP	Possible identifier. Have age at interview construct (C_INTAGE_PUB)
R2_A73	Respondent and Interview Type	DROP	Summarized in construct C_RTYPE
R2_A74	Resp Lists Topics of Survey (First Time)	DROP	Survey administration variable
R2_A76	Resp Lists Topics of Survey (Second Time)	DROP	Survey administration variable
R2_A77	Resp Understands Voluntary (First Time)	DROP	Survey administration variable
R2_A77A	Resp Understands Voluntary (Second Time)	DROP	Survey administration variable
R2_A78	Resp Understands Confidential (First Time)	DROP	Survey administration variable
R2_A78A	Resp Understands Confidential (Second Time)	DROP	Survey administration variable
R2_A86	New Proxy Lists Topics of Survey (First Time)	DROP	Survey administration variable
R2_A88	New Proxy Lists Topics of Survey (Second Time)	DROP	Survey administration variable
R2_A89	New Proxy Understands Voluntary (First Time)	DROP	Survey administration variable
R2_A89A	New Proxy Understands Voluntary (Second Time)	DROP	Survey administration variable

R2_L3_I	Highest Year/Grade Finished in School, Imputed	REPLACE	Possible identifier. Use L3_i_PUB

Variable	Label	File Status	Reasons for Drop/Replace
R2_L3_IFLAG	Highest Year/Grade Finished in School, Imputation Flag	DROP	Little analytic value
R2_L4	Highest Year/Grade Father Finished in School	REPLACE	Possible identifier. Use L4_PUB
R2_L5	Highest Year/Grade Mother Finished in School	REPLACE	Possible identifier. Use L5_PUB
R2_L6FT	Height: Feet	DROP	Possible identifier. Summarized in C_BMI_CAT_I
R2_L6IN	Height: Inches	DROP	Possible identifier. Summarized in C_BMI_CAT_I
R2_L7	Weight	DROP	Possible identifier. Summarized in C_BMI_CAT_I
R2_L8	Marital Status	DROP	Imputed version on file
R2_L8_I	Marital Status, Imputed	REPLACE	Possible identifier. Use L8_i_PUB
R2_L8_IFLAG	Marital Status, Imputation Flag	DROP	Little analytic value
R2_L9	Live With Spouse	DROP	Possible identifier. Use C_COHAB_I, L8_I_PUB
R2_L10	Live With Partner	DROP	Possible identifier. Use C_COHAB_I, L8_I_PUB
R2_L11	Living Situation	DROP	Imputed version on file
R2_L11_I	Living Situation, Imputed	REPLACE	Possible identifier. Use L11_i_PUB
R2_L11_IFLAG	Living Situation, Imputation Flag	DROP	Little analytic value
R2_L12	Type of Place Live	REPLACE	Possible identifier. Use L12_PUB
R2_L16	Number Adults 18 and Older in Household	DROP	Possible identifier. Use C_NUMADULTHH_PUB
R2_L17	Number of Children Under 18 in Household	DROP	Possible identifier. Use C_NUMCHILDHH_PUB
R2_L19	Number Children That Are Your Own	DROP	Possible identifier. Use C_NUMOWNCHILDHH_PUB
R2_L20	Children Under 18 Living Outside Household	DROP	Possible identifier. Use C_NUMOWNCHILDHH_PUB
R2_L21	Number Children Under 18 Not Living in Household	DROP	Possible identifier. Use C_NUMOWNCHILDHH_PUB
R2_L22	Children Living in Household Under Age Six	DROP	Possible identifier and few respondents
R2_L23AAMT	Total 2004 Income Before Taxes	DROP	Summarized in construct C_HHINC2004
R2_L23AHOP	How Often Paid in 2004	DROP	Summarized in construct C_HHINC2004
R2_L23B	How Many Days/Weeks/Months Rec'd Income in 2004	DROP	Summarized in construct C_HHINC2004
R2_L24	Household income in 2004	REPLACE	Possible identifier. Use C_HHINC2004_PUB
R2_C_COHAB	Cohabitation Status	DROP	Imputed version on file
R2_C_COHAB_IFLAG	Cohabitation Status, Imputation flag	DROP	Little analytic value
R2_C_RACE_I	Race, Imputed	REPLACE	Possible identifier. Use C_RACE_I_PUB
R2_C_RACE_IFLAG	Race, Imputation Flag	DROP	Little analytic value
R2_C_BMI	Body Mass Index	DROP	Possible identifier. Use C_BMI_CAT_I
R2_C_BMI_CAT	Body Mass Index Categories, Imputed	DROP	Imputed version on file
R2_C_BMI_CAT_IFLAG	Body Mass Index Categories, Imputation Flag	DROP	Little analytic value
R2_C_HHSIZE	Household Size	DROP	Imputed version on file
R2_C_HHSIZE_I	Household Size, Imputed	REPLACE	Limited analytic value. Used only to create poverty level construct; use C_HHSIZE_PUB
R2_C_HHSIZE_IFLAG	Household Size, Imputation Flag	DROP	Little analytic value
R2_C_NUMCHILDHH	Number Children in Household	DROP	Imputed version on file

Variable	Label	File Status	Reasons for Drop/Replace
R2_C_NUMCHILDHH_I	Number Children in Household, Imputed	REPLACE	Possible identifier. Use R2_C_NUMCHILDHH_PUB
R2_C_NUMCHILDHH_IFLAG	Number Children in Household, Imputation Flag	DROP	Little analytic value
R2_C_NUMCHILDOHH	Number Children Outside household	REPLACE	Possible identifier. Use C_NUMCHILCOHH_PUB
R2_C_NUMCHILDHH_POV	Number of Children for Poverty Level	DROP	Little analytical value; only used for poverty level calculation
R2_C_FEDPOVERTYLEVEL	2004 Federal Poverty Level	DROP	Imputed version on file
R2_C_FEDPOVERTYLEVEL_IFLAG	2004 Federal Poverty Level, Imputation Flag	DROP	Little analytic value
R2_C_HHINC2004	2004 Household Income	REPLACE	Possible identifier. Use C_HHINC2004_PUB
R2_M2a_Rlshp	How Proxy Related to SP	DROP	Survey administration variable
R2_M8	How Contact Related to SP	DROP	Survey administration variable
R2_M10	Relationship of Contact to SP	DROP	Survey administration variable
R2_M11	Respondent or Proxy Interviewed	DROP	Survey administration variable
R2_M12	Respondent Assisted During Interview	DROP	Survey administration variable
R2_M13	How Assistant/Proxy Related to SP	DROP	Survey administration variable
R2_M14_1	Assist/Proxy Needed b/c Didn't Know How to Answer	DROP	Survey administration variable
R2_M14_2	Assist/Proxy Needed b/c Hospitalized	DROP	Survey administration variable
R2_M14_3	Assist/Proxy Needed b/c Institutionalized	DROP	Survey administration variable
R2_M14_4	Assist/Proxy Needed b/c Hearing Problem	DROP	Survey administration variable
R2_M14_5	Assist/Proxy Needed b/c Speech Problem	DROP	Survey administration variable
R2_M14_6	Assist/Proxy Needed b/c Language Problem	DROP	Survey administration variable
R2_M14_7	Assist/Proxy Needed b/c Poor Memory	DROP	Survey administration variable
R2_M14_8	Assist/Proxy Needed b/c Mental Condition	DROP	Survey administration variable
R2_M14_9	Assist/Proxy Needed b/c Physical Illness	DROP	Survey administration variable
R2_M14_10	Assist/Proxy Needed b/c Non-Health Reason	DROP	Survey administration variable
R2_M14_11	Assist/Proxy Needed b/c Failed Cognitive Test	DROP	Survey administration variable
R2_M15	Respondent Intellectually Capable of Responding	DROP	Survey administration variable
R2_M16	Respondent's Answers Accurate	DROP	Survey administration variable
R2_M17	Respondent Understood Questions	DROP	Survey administration variable
R2_M18	Interview tiring For Respondent	DROP	Survey administration variable
R2_M19	Respondent Had Diff Hearing	DROP	Survey administration variable
R2_M20	Respondents Hearing Diff Affected Interview	DROP	Survey administration variable
R2_N_SSILastMnth	SSI BENEFIT PAID month before interview	REPLACE	Possible identifier. Use N_SSILASTMNTN_PUB
R2_N_SSDILastMnth	FEDERAL SSDI BENEFIT PAID month before interview	REPLACE	Possible identifier, use NEW_SSDILASTMNTN_PUB
R2_N_DepenLastMnth	DEPENDENT PAYMENT AMOUNT month before interview	REPLACE	Possible identifier, use NEW_DEPENLASTMNTN_PUB
R2_New_TotSSbenLastMnth	Total Benefits for the Month Before the Interview date	REPLACE	Possible identifier, use NEW_TOTSSBENLASTMNTN_PUB
R2_N_BENABSOFEARN_ATINT	Benefits in the absence of earnings at interview	REPLACE	Possible identifier. Use N_BENABSOFEARN_ATINT_PUB
R2_N_DEPEN_ATINT	SSA dependent benefit amount at interview	DROP	Possible identifier and few respondents with data
R2_N_MNTHSLNGSTTTWPROV2004	months with longest TTW provider in 2004	DROP	Possible identifier. Use N_MNTHSLNGSTTTWPROV2004_PUB

Variable	Label	File Status	Reasons for Drop/Replace
R2_N_NUMTTWPROV2004	total number of TTW providers in 2004	DROP	Possible identifier. Use N_NUMTTWPROV2004_PUB
R2_N_SSDI_ATINT	FEDERAL SSDI BENEFIT PAID at interview	REPLACE	Possible identifier. Use N_SSDI_ATINT_PUB
R2_N_SSI_ATINT	State and Federal SSI BENEFIT PAID month at interview	REPLACE	Possible identifier. Use N_SSI_ATINT_PUB
R2_N_TTWMNTHSASSGNTKT	number of months since TTW ticket first assigned	DROP	Possible identifier. Use N_TTWMNTHSASSGNTKT_PUB
R2_N_TTWMNTHSTKTMAIL	Months from TTW ticket mail month until interview date	DROP	Possible identifier. Use N_TTWMNTHSTKTMAIL_PUB
R2_N_TTWMONENRL_ATINT	As of interview month, number of months enrolled in TTW	DROP	Possible identifier. Use N_TTWMONENRL_ATINT_PUB
R2_N_TTWUNASSIGNDATE_ATINT	For former TTW participants (as of interview), last ticket unassignment date	DROP	Possible identifier and few respondents with data
R2_N_TOTSSBEN_ATINT	Total Benefits at Interview date	REPLACE	Possible identifier. Use N_TOTSSBEN_ATINT_PUB
R2_N_MTHSEARLENT	Months since earliest SSI or SSDI entitlement date by time of interview	REPLACE	Possible identifier. Use N_MTHSEARLENT_PUB
R2_N_MTHSRECENT	Months since most recent SSI or SSDI entitlement date by time of interview	REPLACE	Possible identifier. Use N_MTHSRECENT_PUB
R2_N_FIPSATINT	FIPS (State and County) code at Interview	DROP	Contains geographic information.
R2_N_EPEATINT	EPE in survey month	DROP	Possible identifier and few respondents
R2_N_PIAATINT	Primary Insurance Amount (PIA) at Interview	REPLACE	Possible identifier. Use N_PIAATINT_PUB

APPENDIX I

VARIABLES RECODED FOR THE PUBLIC USE FILE

APPENDIX I

VARIABLES RECODED FOR THE PUBLIC USE FILE

Variable Name	Description of Recode
Caseid_Pub	Caseid assigned that cannot be linked across survey rounds.
R2_A_PSU_PUB	Values scrambled for PUF.
R2_C_MainConColDiagGrp_PUB	Grouped as 0=Other; 1=Mental Illness; 2=Cognitive Disability; 3=Muscular/Skeletal; 4=Sensory Disorders.
R2_C_Intage_PUB	Grouped by ranges for PUF (18-25, 26-40, 41-55, and 56 and older).
R2_C_MainCurJobSOC_PUB	Grouped as: 1=Service Occupations, 2=Sales, Office, and Administrative Occupations, 3=Production and Transportation.
R2_C_MainCurJobNAICS_PUB	Grouped as: Manufacturing, Construction, Utilities, Mining, and Agriculture; Retail and Wholesale Trade; Administration, Management, Professional, Real Estate, Information, Finance, and Education; Health Care and Social Assistance; and Other Industries.
R2_C_totcurmthpay_I_PUB	Grouped as 1=200 or <; 2=201-600; 3=601-800; and 4=>800.
R2_C_MnthsMainCurJob_PUB	Bottom coded at 6 and top coded at 30 for PUF.
R2_C_MainCurJobRepSSA_PUB	Top coded at 4 for PUF.
R2_C_TotCurWkHrs_I_PUB	Bottom coded at 8 and top coded at 40 for PUF.
R2_C_TotCurHrMnth_I_PUB	Bottom code at 35 and top coded at 174 for PUF.
R2_D6yr_m_PUB	Main job held in 2004 computed by determining which job had most hours worked in 2004. Bottom coded at 2000 for PUF.
R2_D8yr_m_PUB	Main job held in 2004 computed by determining which job had most hours worked in 2004. No recode needed.
R2_D15_m_PUB	Main job held in 2004 computed by determining which job had most hours worked in 2004. No recode needed.
R2_D16_m_PUB	Main job held in 2004 computed by determining which job had most hours worked in 2004. Bottom coded at 8 and top coded at 40 for PUF.
R2_D17_m_PUB	Main job held in 2004 computed by determining which job had most hours worked in 2004. Bottom coded at 12 for PUF.
R2_D18_m_PUB	Main job held in 2004 computed by determining which job had most hours worked in 2004. No recode needed.
R2_C_MainJob2004SOC_PUB	Grouped as: 1=Service Occupations; 2=Sales, Office, and Administrative Occupations; 3=Production and Transportation.

APPENDIX I (continued)

Variable Name	Description of Recode
R2_C_MainJob2004NAICS_PUB	Grouped as: Manufacturing, Construction, Utilities, Mining, and Agriculture; Retail and Wholesale Trade; Administration, Management, Professional, Real Estate, Information, Finance, and Education; Health Care and Social Assistance; and Other Industries.
R2_C_MainJobMnthPay2004_PUB	Grouped into 4 categories: 1=200 or <; 2=201-600; 3=601-800; and 4=>800.
R2_C_Tot2004Pay_PUB	Bottom code at 1,000 and top code at 7,000 for PUF.
R2_C_TotHrs2004_PUB	Bottom coded at 520 and top coded at 2,080 for PUF.
R2_C_UsWkHr2004_PUB	Top coded at 40 for PUF.
C_TotServCost2003_PUB	Top coded at 6,000 for PUF.
R2_C_NumProv2005_PUB	Top coded at 4 for PUF.
R2_C_NumProvEvused_PUB	Top coded at 6 for PUF.
R2_C_TotSerCost2004_PUB	Top-coded at 6,000 or more for PUF.
R2_J11_10_PUB	Grouped J11_3, 4, and 5 with 10 (other) for PUF.
R2_INCSOURCE1_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_INCSOURCE2_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_INCSOURCE3_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_INCSOURCE4_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_INCSOURCE5_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_INCSOURCE6_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_INCSOURCE7_PUB	Indicates sources received income from last month. K4, K6, and K14 grouped for PUF.
R2_C_LstMnthPay_PUB	Grouped into 5 categories: 0; 1=200 or <; 2=201-600; 3=601-800; and 4=>800.
R2_C_TotGovCashBen_PUB	Bottom code at 30 and top coded at 1,600 for PUF.
R2_C_TotNonCashBen_PUB	Top coded at 230 for PUF.

APPENDIX I (continued)

Variable Name	Description of Recode
R2_L3_I_PUB	Grouped as: 1=Did not complete HS or GED; 2=HS or equivalent; 3=Some college (1-3 years); 4=4-year degree or higher; 5=Other for PUF.
R2_L4_PUB	Grouped as: 1=Did not complete HS or GED; 2=HS or equivalent; 3=Some college (1-3 years); 4=4-year degree or higher; 5=Other for PUF.
R2_L5_PUB	Grouped as: 1=Did not complete HS or GED; 2=HS or equivalent; 3=Some college (1-3 years); 4=4-year degree or higher; 5=Other for PUF.
R2_L8_I_PUB	Grouped as: 1=Married, 2=Other.
R2_L11_I_PUB	Grouped as 1=Live with parents/spouse/partner, 2=Other for PUF.
R2_L12_PUB	Grouped as 1= Single family home/Mobile home/Regular apartment, 2=Other for PUF.
R2_L24_PUB	Top coded as 9 (75,001) for PUF.
R2_C_Race_I_PUB	Grouped as 1=White, 2=Other for PUF.
R2_C_Hhsize_PUB	Top coded at 6 for PUF.
R2_C_NumchildHH_PUB	Top code at 1 for PUF.
R2_C_NumOwnChildOHH_PUB	Top coded at 3 for PUF.
R2_C_NumOwnChildHH_PUB	Top coded at 1 for PUF.
R2_C_NumNonOwnChildHH_PUB	Top coded at 3for PUF.
R2_C_NumOwnChild_PUB	Top coded at 4 for PUF
R2_C_Numadulthh_PUB	Top coded at 2 for PUF
R2_C_HhInc2004_PUB	Grouped as 1=<10,000; 2=10,000-20,000; 3=20,001-30,000; 4=30,001-40,000; 5=40,001-60,000; 6=60,001 and >.
R2_N_DepenLastMnth_PUB	Top coded at 400 for PUF.
R2_New_SSDILastMnth_PUB	Top coded at 1,300 for PUF.
R2_N_SSILastMnth_PUB	Top coded at 800 for PUF.
R2_New_TotSSbenLastMnth_PUB	Top coded at 1,500 for PUF.
R2_N_BenAbsofEarn_atInt_PUB	Top coded at 1,500 for PUF.
R2_N_MthsEarlEnt_PUB	Grouped as: 1-18; 19-30; 31-36; 37-41 months, etc. Top coded at 361 months for PUF.

APPENDIX I (continued)

Variable Name	Description of Recode
R2_N_MthsRecEnt_PUB	Grouped as: 1-18; 19-30; 31-36; 37-41 months, etc. Top coded at 241 months for PUF.
R2_N_SSDI_atInt_PUB	Top coded at 1,300 for PUF.
R2_N_SSI_atInt_PUB	Top coded at 800 for PUF.
R2_N_TotSSben_atInt_PUB	Top coded at 1,500 for PUF.
R2_N_PIAatInt_PUB	Top coded at 1,400 for PUF.

APPENDIX J

**PARAMETER ESTIMATES AND STANDARD ERRORS FOR
NONRESPONSE MODELS**

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

TABLE J.1

LOCATION LOGISTIC PROPENSITY MODEL: REPRESENTATIVE BENEFICIARY SAMPLE

Factors in the Location Model		
Main Effects	Parameter Estimate ^a	Standard Error
Number of Moves in Past 5 Years (MOVE_1):		
One, two, three, or four moves	-1.320 [†]	0.449
No moves, old information, or no information about moves	Ref. cell	
Primary Diagnosis Classification (DIG_1):		
Beneficiary had mental disability	0.138 [†]	0.350
Beneficiary had physical disability (excluding deaf cases)	-0.180 [†]	0.386
Beneficiary was deaf, or disability unknown	Ref. cell	
Identity of Payee Relative to Beneficiary (REPPEPAYEE_1):		
Beneficiary received benefit payments himself/herself, or from family member	0.693 [†]	0.268
Institution received benefits on behalf of beneficiary, or information unknown	Ref. cell	
Indicator Whether Beneficiary and Applicant for Benefits are in Same Zip Code (PDZIPSAME):		
Applicant and beneficiary live in same zip code	1.312 [†]	0.634
Applicant and beneficiary live in different zip code	0.326 [†]	0.813
Information about whether applicant and beneficiary live in same zip code not given	Ref. cell	
Gender (SEX):		
Female	0.246	0.131
Male	Ref. cell	
Urbanicity of Place of Residence of Beneficiary (METRO_1):		
Beneficiary resides in metropolitan statistical area (MSA)	Ref. cell	
Beneficiary resides in nonmetropolitan area adjacent to large metropolitan area	0.649*	0.311
Beneficiary resides in nonmetropolitan area not adjacent to large metropolitan area	0.356	0.240
Whether Beneficiary is Institutionalized (INSTIT):		
Beneficiary is institutionalized	0.710	0.409
Beneficiary is not institutionalized, or no information	Ref. cell	
Geographic Region (Based on U.S. Census Divisions) of Beneficiary's Place of Residence (DIVISION):		
Pacific	-0.188 [†]	0.315
Mountain	-0.245	0.327
East North Central	-0.312 [†]	0.293
West North Central	0.622	0.401
East South Central	-0.048	0.330
West South Central	0.191 [†]	0.434
South Atlantic	0.02 [†]	0.34
Middle Atlantic	-0.306 [†]	0.302
New England	Ref. cell	
Address of Payee Obtained from SSI File (SSIADDP):		
Yes	-0.384	0.240
No or unknown	Ref. cell	

TABLE J.1 (continued)

Factors in the Location Model		
Main Effects	Parameter Estimate ^a	Standard Error
Beneficiary's Living Situation (LIVING_1):		
Beneficiary lives with his or her parents	-1.047**	0.344
Beneficiary does not live with his or her parents, or unknown	Ref. cell	
Number of Phone Numbers on SSA File Over Past Five Years (PHONE_1):		
No record of changes	-0.159 [†]	0.156
One or more changes, or information unknown	Ref. cell	
Beneficiary's Age Category (AGECAT):		
Age in range 18 to 29 years	0.096	0.131
Age in range 30 to 39 years	0.071	0.124
Age in range 40 to 49 years	Ref. cell	
Age in range 50 to 64 years	0.053 [†]	0.199
Two-factor Interactions^b		
DIVISION * PDZIPSAME		
South Atlantic * Applicant and beneficiary live in same zip code	0.707*	0.299
South Atlantic * Applicant and beneficiary live in different zip codes	-0.806 [†]	0.469
Pacific * Applicant and beneficiary live in different zip codes	-0.697	0.445
Middle Atlantic * Applicant and beneficiary live in different zip codes	1.439*	0.706

DIVISION * DIG_1		
Pacific * Beneficiary had physical disability (excluding deaf cases)	-0.295	0.383
East North Central * Beneficiary had physical disability (excluding deaf cases)	0.753	0.416
South Atlantic * Beneficiary had physical disability (excluding deaf cases)	0.027 [†]	0.375
West South Central * Beneficiary had mental disability	-0.696 [†]	0.498
PDZIPSAME * DIG_1		
Beneficiary had physical disability (excluding deaf cases) * Applicant and beneficiary live in same zip code	0.101	0.562
Beneficiary had physical disability (excluding deaf cases) * Applicant and beneficiary live in different zip codes	0.335 [†]	0.731
Beneficiary had mental disability * Applicant and beneficiary live in same zip code	-0.653	0.541
Beneficiary had mental disability * Applicant and beneficiary live in different zip codes	-0.470 [†]	0.645
PDZIPSAME * REPPEPAYEE_1		
Applicant and beneficiary live in same zip code * Beneficiary received benefit payments himself/herself, or from family member	-1.192**	0.395
Applicant and beneficiary live in different zip codes * Beneficiary received benefit payments himself/herself, or from family member	-0.742	0.511
MOVE_1*PHONE_1		
One, two, three, or four moves * No record of phone changes	0.940	0.497
PDZIPSAME * AGECAAT		
Applicant and beneficiary live in same zip code * Age category 50 to 64	0.601	0.350
Applicant and beneficiary live in different zip codes * Age category 50 to 64	0.486	0.507

TABLE J.1 (continued)

Factors in the Location Model		
Main Effects	Parameter Estimate ^a	Standard Error
Three-factor Interactions^b		
DIG_1 * DIVISION * PDZIPSAME		
Beneficiary had physical disability (excluding deaf cases) * South Atlantic * Applicant and beneficiary live in different zip codes	1.617	0.913
Beneficiary had mental disability * West South Central * Applicant and beneficiary live in different zip codes	1.871	1.347

^a Parameter estimates with a cross (†) are essentially meaningless because higher order terms that include the variable in question are also in the model. One star (*) and two stars (**) represent significance at the 5 percent and 1 percent levels respectively.

^b All combinations for the listed interactions that are not shown are part of the reference cells

TABLE J.2

COOPERATION LOGISTIC PROPENSITY MODEL: REPRESENTATIVE BENEFICIARY SAMPLE

Factors in the Cooperation Model		
Main Effects	Parameter Estimate ^a	Standard Error
Number of Address Changes in the Past Five Years (MOVE_2):		
At most one move	0.928 [†]	0.510
Two or more moves, or information older than five years, or no information	Ref. cell	
Gender (SEX)		
Female	-0.064 [†]	0.248
Male	Ref. cell	
Beneficiary Recipient Benefit Type (SSI_SSDI_2)		
SSDI only	-0.547 [†]	0.265
SSI only, or both SSI and SSDI	Ref. cell	
Disability Diagnosis Classification (DIG):		
Beneficiary had physical disability (excluding deaf cases)	0.682 [†]	0.466
Beneficiary had mental disability	0.352 [†]	0.487
Beneficiary was deaf	0.542 [†]	0.992
Information about disability not given	Ref. cell	
Identity of Payee Relative to Beneficiary (REPREPAYEE_2):		
Family member received benefits on behalf of beneficiary	0.023 [†]	0.269
All other payees (including those with unknown payee identity)	Ref. cell	
Indicator Whether Beneficiary and Applicant for Benefits Are in Same Zip Code (PDZIPSAME_2):		
Applicant and beneficiary live in same zip code	0.197	0.132
Applicant and beneficiary live in different zip code, or no information	Ref. cell	
Urbanicity of Beneficiary's Place of Residence (METRO):		
Beneficiary lived in metropolitan area with population of 1 million or more	Ref. cell	
Beneficiary lived in metropolitan area with population from 250,000 to 1 million	0.148 [†]	0.243
Beneficiary lived in metropolitan area with population under 250,000	-0.225 [†]	0.308
Beneficiary lived in nonmetropolitan area adjacent to large (> 1 million) metropolitan area	-1.630 [†]	0.523
Beneficiary lived in nonmetropolitan area adjacent to metropolitan area under 1 million	0.488 [†]	0.580
Beneficiary lived in nonmetropolitan area not adjacent to metropolitan area	1.549 [†]	0.590
Geographic Region (Based on U.S. Census Divisions) of Beneficiary's Residence (DIVISION_2):		
South Atlantic	0.049	0.130
East North Central	0.115 [†]	0.238
West South Central	0.684 [†]	0.259
All regions except South Atlantic, East North Central, and West South Central	Ref. cell	
Whether the Beneficiary was Hispanic or Not (HISPANICITY):		
Beneficiary was Hispanic	-0.388	0.261
Beneficiary not Hispanic, or unknown	Ref. cell	

TABLE J.2 (continued)

Factors in the Cooperation Model		
Main Effects	Parameter Estimate ^a	Standard Error
Race of the Beneficiary (RACE_2):		
White	0.847 [†]	0.524
Asian/Pacific Islander	-0.974 [†]	0.373
Race known to be neither White nor Asian/Pacific Islander, or unknown	Ref. cell	
Beneficiary's Age Category (AGECAT_2):		
Age in range 40 to 49 years	0.131	0.096
Age in range 18 to 39 years, or 50 to 64 years	Ref. cell	
Beneficiary's Type of Claim (TOC_2):		
Disability claim	-0.270 [†]	0.178
Survivor claim, or unknown	Ref. cell	
Number of Phone Numbers on SSA File Over Past Five Years (PHONE_2):		
One or fewer phone changes on SSA file over past five years, or unknown	Ref. cell	
Two or more changes in phone number on SSA file	-1.595 [†]	0.648
Two-factor Interactions^b		
RACE_2 * METRO

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

APPENDIX K

**SAMPLING VARIANCE ESTIMATION AND SAMPLE SUDAAN AND SAS
STATEMENTS**

PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING

SAMPLING VARIANCE ESTIMATION AND SAMPLE SUDAAN STATEMENTS

The computation of an estimate of a population characteristic (such as the proportion of Ticket participants who receive specific services) can be performed using the sampling weights and routines available in most statistical software or computer programs. Measures of the reliability of this estimate require the computation of the sampling variance. As described in Chapter VIII, the design-based sampling variance of an estimate derived from survey data for a statistic is a measure of the random variation among estimates of the same statistic computed over repeated implementation of the same sample design with the same sample size on the same population. The sampling variance is a function of the population characteristics, the form of the statistic, and the nature of the sampling design. Only some statistical software has the capability to compute the design-based sampling variance.

There are a number of releases of the software for survey data analysis, running on several different platforms. Although the same procedure statements are used, there can be enhancements or subtle differences from one release to the next, particularly in reading and writing external data files. The statements displayed in the examples in this appendix are tailored for SUDAAN Release 9.0.0, SAS-Callable for Windows, and for SAS version 9.1. The user should take this into consideration when using these examples or parts of these examples verbatim.

Currently, more survey data analysis software packages use the Taylor series linearization procedure and explicit sampling variance equations. Therefore, we developed the variance estimation specifications necessary for the Taylor series linearization procedure (PseudoStrata and PseudoPSU). The example procedures represent relatively simple, straightforward applications. The options (various parameters, test statistics, etc.) in the sample programs may

not be suitable for all your needs. Likewise, particular types of analyses may require options that are not displayed in the sample program statements. Our intention is not to suggest analytical approaches but to provide the key parameters that capture the relevant characteristics of the sample design. These parameters are found in the SUDAAN *design, weight, and nest* statements, and the SAS *weight, strata, and cluster* statements.¹ In addition, the examples are limited to simple descriptive procedures for producing means or percentages. The same sample design parameters used for descriptive procedures are used for more complex estimation procedures such as regression or logit.

The NBS is made up of two samples, the Representative Beneficiary Sample and the Ticket Participant Sample, each of which can be used for certain types of analyses. The Ticket Participant Sample is a subgroup of beneficiaries living in Phase 1 and Phase 2 states who used the ticket at least once who had used the ticket at least once between January 1, 2004 and November 18, 2004. The Representative Beneficiary Sample is a nationally representative sample of SSI and DI beneficiaries who were in active pay status as of June 2004. Each sample requires different sample design statements and weights. The user is encouraged to review the tables in Chapter III, which indicate the appropriate weights for Ticket Participant and Representative Beneficiary analyses. Table 4.1 from Chapter IV explains how to choose the design variables appropriate for each type of estimate.

The following examples are provided:

1. National estimates

- Beneficiaries who have ever worked (R2_C_EvrWorked)

¹ The *strata* and *cluster* statements in SAS perform the same function as the *nest* statement in SUDAAN. *Weight* has the same function in the two software packages. There is no equivalent statement in SAS to the *design* statement in SUDAAN, which allows for sampling with or without replacement. SAS assumes sampling with replacement, unless the TOTAL= option is implemented. In the NBS, sampling is done with replacement.

- Beneficiaries using employment related services in 2004 (R2_C_SERVUSE2004)

2. TTW participant estimates

- Estimate of ticket participants currently working (R2_B24_i)
- Number of ticket participants with ticket assigned to an Employment Network in 2004 (R2_E37)

Preprocessing or recoding may be required for some variables because of missing data. Missing data in the NBS files are assigned a value of .D, (don't know) .R. (refused), .M (missing), .L (logical skip), or .P (partial completed).

Classification variables (identified by the SUBGROUP statement in SUDAAN and the DOMAIN statement in SAS) with zero or negative values will be treated by SUDAAN as missing and dropped from the procedure. This is not true for SAS, where the zero or negative values will be treated the same as positive values for the classification variable. This also does not hold true for analysis variables for either SAS or SUDAAN (VAR for both) where zero or negative values are valid. Records with zero weights will automatically be excluded from estimates produced in SUDAAN and SAS procedures.

In using SUDAAN, the full sample should be processed even when analyses are limited to subgroups or subpopulations. This is to ensure the correct computation of the sampling variance. The SUDAAN statement SUBPOPN should be used to identify the specific analytic subpopulation of interest. The target population can be broken into desired subpopulations using the DOMAIN statement in SAS, though analysis is not limited to the single subpopulation of interest. The sampling variance estimates that SAS and SUDAAN compute may be wrong if the file is reduced to a specific subpopulation prior to running the procedure.

1. National Estimates

This example estimates the percentage of beneficiaries who have ever worked and ever used services in 2004. Standard errors of the percentages, unweighted and weighted population counts, and sample design effects are also included in the output. SUDAAN reads only the 4,864 observations for the National Beneficiary Sample; the other 3,242 observations are skipped because the weight variable R2_wtr2_ben is nonpositive.

- Use the Representative Beneficiary Sample to provide an estimate of R2_C_EvrWorked (ever worked for pay).
- Use the Representative Beneficiary Sample to provide an estimate of R2_C_SERVUSE2004 (Used services in 2004).

SUDAAN PARAMETERS FOR NATIONAL ESTIMATES FROM THE NBS ROUND 2 REPRESENTATIVE BENEFICIARY SAMPLE

Analysis Variable of R2_C_EvrWorked (ever worked for pay)

SUDAAN EXAMPLE

```
proc descript data="SASdatasetname" filetype=sas design=wr;

SAS EXAMPLE

```
proc surveymeans data="SASdatasetname";
  strata    A_STRATA;
  cluster   A_PSU;
  weight    R2_Wtr2_ben;
  var      R2_C_SERVUSE2004;
  title    "TTW National Estimates";
```

Weight Variables

Beneficiary sample: **Wtr2_ben**
Combined samples: **Wgt1_comb**

Nest Variables

R2_A_STRATA

1. Clustered samples for both beneficiaries and participants
 - a. R2_A_STRATA = 1000 for PSUs in Phase 1 states (labeled as 100 in Round 1)
 - b. R2_A_STRATA = 2000 for PSUs in Phase 2 states (labeled as 200 in Round 1)
 - c. R2_A_STRATA = 3000 for PSUs in Phase 3 states (labeled as 300 in Round 1)
2. Unclustered samples for participants requiring unclustered sample
 - a. R2_A_STRATA = 1111 Outcome-only participants in PSUs in Phase 1 states, Rd 1 Frame (labeled as 111 in Round 1)
 - b. R2_A_STRATA = 1121 Outcome-only participants not in PSUs in Phase 1 states, Rd 1 Frame (labeled as 112 in Round 1)
 - c. R2_A_STRATA = 1211 Milestones & outcomes participants in PSUs in Phase 1 states, Rd 1 Frame
 - d. R2_A_STRATA = 1221 Milestones & outcomes participants not in PSUs in Phase 1 states, Rd 1 Frame
 - e. R2_A_STRATA = 1112 Outcome-only participants in PSUs in Phase 1 states, Rd 2 Frame
 - f. R2_A_STRATA = 1122 Outcome-only participants not in PSUs in Phase 1 states, Rd 2 Frame
 - g. R2_A_STRATA = 1212 Milestones & outcomes participants in PSUs in Phase 1 states, Rd 2 Frame
 - h. R2_A_STRATA = 1222 Milestones & outcomes participants not in PSUs in Phase 1 states, Rd 2 Frame
 - i. R2_A_STRATA = 2112 Outcome-only participants in PSUs in Phase 2 states
 - j. R2_A_STRATA = 2122 Outcome-only participants not in PSUs in Phase 2 states
 - k. R2_A_STRATA = 2212 Milestones & outcomes participants in PSUs in Phase 2 states
 - l. R2_A_STRATA = 2222 Milestones & outcomes participants not in PSUs in Phase 2 states

A_PSU

1. Clustered samples for both beneficiaries and participants
R2_A_PSU = PSU identifier
2. Unclustered samples for participants requiring unclustered sample
R2_A_PSU = MPR_ID for Outcome-only participants

Notes:

1. Before each SUDAAN procedure, sort by R2_A_STRATA and R2_A_PSU. Sorting is not required in SAS.
2. Use SUDAAN's SUBPOP statement to define population for which estimates are wanted. For example, for estimates of SSI participant population, use SUBPOP to define SSI participants. In SAS, you must use the DOMAIN statement to identify subpopulations of interest. For example, suppose the variable BENETYPE indicates the type of beneficiary, with 3 levels: SSI, SSDI, and both SSI and SSDI. If you want an estimate involving the subpopulation of all SSI beneficiaries, then you would need to create a second variable, BENETYPE2, combining the two relevant levels of BENETYPE, then use DOMAIN with the BENETYPE2 variable to obtain the needed estimate.

2. Ticket Participant Estimates

This example estimates the percentage of TTW participants working at the time of interview and the number of participants with a ticket assigned to an Employment Network in 2004. Standard errors of the percentages, unweighted and weighted population counts, and sample design effects are also included in the output. SUDAAN reads only the 3,242 observations for the Ticket Participant Sample; the other 4,864 observations are skipped because the weight variable Wtr2_par is nonpositive.

- Use the Ticket Participant Sample to provide estimate of R2_B24_i (currently working, imputed).
- Use the Ticket Participant Sample to provide estimate of R2_E37 (number of participants with ticket assigned to an Employment Network in 2004).

SUDAAN PARAMETERS FOR NATIONAL ESTIMATES FROM THE NBS ROUND 2 CROSS-SECTIONAL PARTICIPANT SAMPLE

Analysis Variable of R2_B24_i (currently working, imputed).

SUDAAN EXAMPLE

```
proc descript data="SASdatasetname" filetype=sas design=wr;
nest      A_STRATA A_PSU / missunit;
weight    R2_Wtr2_par;
var       "R2_B24_i (currently working, imputed)";
print nsum wsum mean semean deffmean / style=nchs
wsumfmt=f10.0 meanfmt=f8.4 semeanfmt=f8.4 deffmeanfmt=f8.4;
title "TTW Cross-Sectional Participant National Estimates";
```

SAS EXAMPLE

```
proc surveymeans data="SASdatasetname";
strata    A_STRATA;
cluster   A_PSU;
weight    R2_Wtr2_par;
var       R2_B24_i;
```

Analysis Variable of E37 (number of participants with ticket
assigned to an Employment Network in 2003).

SUDAAN EXAMPLE

```
proc descript data="SASdatasetname" filetype=sas design=wr;
nest      A_STRATA A_PSU / missunit;
weight    R2_Wtr2_par;
var       "R2_E37";
print nsum wsum mean semean deffmean / style=nchs
wsumfmt=f10.0 meanfmt=f8.4 semeanfmt=f8.4 deffmeanfmt=f8.4;
title "TTW Cross-Sectional Participant National Estimates";
```

SAS EXAMPLE

```
proc surveymeans data="SASdatasetname";
strata    A_STRATA;
cluster   A_PSU;
weight    R2_Wtr2_par;
var       R2_E37;
```

Weight Variables

Participant sample: R2_Wtr2_Par

Nest Variables

A_STRATA

1. Clustered samples for both beneficiaries and participants
 - a. R2_A_STRATA = 1000 for PSUs in Phase 1 states (labeled as 100 in Round 1)
 - b. R2_A_STRATA = 2000 for PSUs in Phase 2 states (labeled as 200 in Round 1)
 - c. R2_A_STRATA = 3000 for PSUs in Phase 3 states (labeled as 300 in Round 1)
2. Unclustered samples for participants requiring unclustered sample
 - a. R2_A_STRATA = 1111 Outcome-only participants in PSUs in Phase 1 states, Rd 1 Frame (labeled as 111 in Round 1)
 - b. R2_A_STRATA = 1121 Outcome-only participants not in PSUs in Phase 1 states, Rd 1 Frame (labeled as 112 in Round 1)
 - c. R2_A_STRATA = 1211 Milestones & outcomes participants in PSUs in Phase 1 states, Rd 1 Frame
 - d. R2_A_STRATA = 1221 Milestones & outcomes participants not in PSUs in Phase 1 states, Rd 1 Frame
 - e. R2_A_STRATA = 1112 Outcome-only participants in PSUs in Phase 1 states, Rd 2 Frame
 - f. R2_A_STRATA = 1122 Outcome-only participants not in PSUs in Phase 1 states, Rd 2 Frame
 - g. R2_A_STRATA = 1212 Milestones & outcomes participants in PSUs in Phase 1 states, Rd 2 Frame
 - h. R2_A_STRATA = 1222 Milestones & outcomes participants not in PSUs in Phase 1 states, Rd 2 Frame
 - i. R2_A_STRATA = 2112 Outcome-only participants in PSUs in Phase 2 states
 - j. R2_A_STRATA = 2122 Outcome-only participants not in PSUs in Phase 2 states
 - k. R2_A_STRATA = 2212 Milestones & outcomes participants in PSUs in Phase 2 states
 - l. R2_A_STRATA = 2222 Milestones & outcomes participants not in PSUs in Phase 2 states

A_PSU

1. Clustered samples for both beneficiaries and participants
R2_A_PSU = PSU identifier
2. Unclustered samples for participants requiring unclustered sample
R2_A_PSU = MPR_ID for Outcome-only participants

Notes:

1. Before each SUDAAN procedure, sort by R2_A_STRATA and R2_A_PSU. Sorting is not necessary in SAS.
2. Use SUDAAN's SUBPOP statement to define population for which estimates are wanted. For example, for estimates of SSI participant population, use SUBPOP to define SSI participants. In SAS, you must use the DOMAIN statement to identify subpopulations of interest. For example, suppose the variable BENETYPE indicates the type of beneficiary, with 3 levels: SSI, SSDI, and both SSI and SSDI. If you want an estimate involving the subpopulation of all SSI beneficiaries, then you would need to create a second variable, BENETYPE2, combining the two relevant levels of BENETYPE, then use DOMAIN with the BENETYPE2 variable to obtain the needed estimate.
