## **ERRATA**

**(Updated December 20, 2016)**

The SF-8 mental component summary (MCS) and physical component summary (PCS) scores provided in the original National Beneficiary Survey (NBS) data files were calculated incorrectly. The original values excluded an intercept constant needed to scale the scores to general population norms. The intercept constant values are -10.11675 for the MCS, and -9.36839 for the PCS.

Because the intercept constants were not applied, the scores provided in the original data files were too high relative to what they should be on the population-based scale. Thus, if comparing NBS respondents to the general population, NBS respondents would appear healthier than they should. However, within the NBS respondent sample, the scores still appropriately represented greater or lesser mental and physical health according to the design of the SF-8.

The MCS and PCS variables included in the current data files have been corrected and are now valid for comparisons to other populations.

## I. INTRODUCTION

As part of an evaluation of the Ticket to Work and Self-Sufficiency program (TTW), Mathematica Policy Research (MPR) conducted the first round of the National Beneficiary Survey (NBS) in 2004. The survey, sponsored by the Social Security Administration's (SSA) Office of Disability and Income Security Programs, collected data from a national sample of SSA disability beneficiaries (hereafter referred to as the Representative Beneficiary Sample) and a sample of TTW participants (hereafter referred to as the Ticket Participant Sample). MPR collected data using computer-assisted telephone interviewing (CATI) with computer-assisted personal interviewing follow-ups of CATI nonrespondents and those who preferred or needed an in-person interview to accommodate their disabilities.

A voluntary employment program for people with disabilities, TTW was authorized by the Ticket to Work and Work Incentives Improvement Act of 1999. The legislation was designed to create market-driven services to help disability beneficiaries become economically self-sufficient. Under the program, SSA provides beneficiaries with a "Ticket," or coupon, that they may use to obtain employment-support services, including vocational rehabilitation, from an approved provider of their choice (called Employment Networks or ENs).<sup>1</sup>

The TTW program was implemented in three phases. In Phase 1, which began in February 2002, the program was rolled out in 13 states across the country. In Phase 2, which began in November 2002, the program was extended to an additional 20 states plus the District of Columbia. Phase 3, which began in November 2003, implemented TTW in the remaining 17 states and U.S. territories (Thornton, et al. 2004).

---

<sup>1</sup> For more information on the Ticket to Work Program, see Thornton et al. 2004.

## **A. OVERVIEW OF THE NATIONAL BENEFICIARY SURVEY**

### **1. Survey Objectives**

The NBS is one of several components of an evaluation to assess the impact of TTW relative to the current system—the SSA Vocational Rehabilitation Reimbursement Program, which has been in place since 1981. The evaluation includes a process analysis, as well as an impact and a participation analysis. Along with the NBS, the data sources include SSA administrative records and interviews with program stakeholders. The NBS collects data needed for the TTW evaluation that are not available from SSA administrative data or other sources.

The NBS has five key objectives:

1. To provide critical data on the work-related activities of SSI and SSDI beneficiaries, particularly as these activities relate to TTW implementation
2. To collect data on the characteristics and program experiences of beneficiaries who use their Ticket
3. To gather information about beneficiaries who do not use their Ticket, and the reasons for this choice
4. To collect data that will allow us to evaluate the employment outcomes of Ticket users and other SSI and SSDI beneficiaries
5. To collect data on service use, barriers to work, and beneficiary perceptions about TTW and other SSA programs designed to help SSA beneficiaries with disabilities find and keep jobs

The survey data will be combined with SSA administrative data to provide critical information on access to jobs and on employment outcomes for beneficiaries, including those who participate in the TTW program and those who do not. Though some sections of the NBS target beneficiary activity directly related to TTW, most of the survey captures more general information on SSA beneficiaries, including their disabilities, interest in work, use of services, and employment. As a result, SSA and external researchers who are interested in disability and employment issues can use the survey data for other policymaking and program-planning efforts.

## **2. Data Collection Overview**

Round 1 CATI data collection for both samples began in February 2004. Beginning in May 2004, MPR conducted in-person CAPI interviews with beneficiaries who did not respond to the CATI interview, as well as those who could not be located (and whose names and other information were sent to field interviewers for additional locating), or who requested an in-person interview to facilitate their participation in the survey. The survey instrument was identical in each mode. When possible, the interview was attempted with the sample person. If the sample person was unable to complete either a telephone or in-person interview, a proxy respondent was sought. Proxy interviews were attempted only when the sample member was unable to complete the survey himself or herself due to his/her disability. To promote response among Hispanic populations, the questionnaire was available in Spanish. For languages other than English and Spanish, interpreters conducted the interviews. A number of additional accommodations were made available for those with hearing and/or speech impairments including teletypewriter (TTY), Telecommunications Relay Service (TRS), amplifiers, and instant messaging technology.

As shown in Table I.1, the NBS round 1 sample comprised 9,064 cases selected for the Representative Beneficiary Sample and 1,466 cases selected for the Ticket Participant Sample (for a total of 10,530 cases).

TABLE I.1  
 ROUND 1 SAMPLE SIZES, TARGET COMPLETES, AND ACTUAL COMPLETES

Sampling Strata	Sample Size	Target Completes	Actual Completes
National Beneficiary Sample	9,064	7,200	6,520
Ticket Participant Sample	1,466	1,000	1,083
Total Sample Size	10,530	8,200	7,603

Source: NBS, round 1

The round 1 CATI and CAPI data collection was completed in October 2004. Interviews were completed with 6,520 individuals in the Representative Beneficiary Sample and 1,083 people in the Ticket Participant Sample for a total of 7,603 interviews completed. An additional 458 beneficiaries and 73 Ticket participants were determined to be ineligible to participate in the survey.<sup>2</sup> Across both samples, 6,302 cases were completed by telephone and 1,301 were completed by CAPI. Proxy interviews were completed for 1,997 sample members. There were 109 cases in which the sample member was unable to participate and a proxy was unable to be identified. A total of 184 Spanish-language interviews were completed. The weighted response rate for the Representative Beneficiary Sample was 77.5 percent. The weighted response rate for the Ticket Participant Sample was 80.9 percent. More information about the sample selection and sampling weights can be found in Chapter VI.

## **B. NBS RESTRICTED USE AND PUBLIC USE FILES**

This guide describes the content and format of the NBS Restricted and Public Use data files and codebooks. To protect the anonymity of the respondents while providing accurate and

---

<sup>2</sup>Ineligible sample members include those who were deceased, incarcerated, no longer living in the continental United States, or those whose benefit status was pending. For Ticket participants, ineligibles also included sample members who left the program after sampling was completed, or were not contacted by telephone and were not eligible for field follow-up.

detailed data, the NBS data are presented in two formats: a Restricted Use file available only to users approved by SSA and for use on specific research projects, and a Public Use File, released by SSA, for the general public to use in various statistical analyses. These two files offer differing degrees of accessibility to confidential information. For both data files, any information that could directly or indirectly identify a respondent has been removed; this information includes respondents' names, Social Security numbers, and addresses. Because of its more widespread availability, the Public Use File has undergone extensive masking and has fewer available variables than the Restricted Use File. Even with the variables masked, however, the NBS Public Use File offers a wide variety of pertinent variables and topics for the general public to use. The masking procedures employed to create the Public Use File are discussed in more detail in Chapter V. A listing of the variables available on the NBS Restricted Use Data File and Public Use Data File is included as Appendix A.

The Public Use File will be available to researchers through the Health and Medical Care Archive at the Inter-University Consortium for Political and Social Research (ICPSR). The file can be downloaded directly from the ICPS Web site ([www.icpsr.umich.edu](http://www.icpsr.umich.edu)). Researchers must contact SSA to obtain permission to use the Restricted Use File.

### **C. ROUND 2 DATA DOCUMENTATION REPORTS**

The following reports make up the complete documentation describing the NBS, the round 2 data collection, and the data files:

- ***Editing, Coding, Imputation, and Weighting Report*** (Potter, et al. 2008). This report summarizes the editing, coding, imputation, and weighting procedures as well as the development of standard errors for the round 2 NBS. It includes an overview of the variable naming, coding, and construction conventions used in the data files and accompanying codebooks; describes how the sampling weights were computed to the final post-stratified analysis weights for both the Representative Beneficiary Sample and the Ticket Participant Sample (and describes the procedures for combining these samples); describes the procedures used to impute missing responses; and discusses procedures that should be used to estimate sampling variances for the NBS.

- ***Cleaning and Identification of Data Problems Report*** (Wright and Barrett 2008). This report describes the data processing procedures performed for round 2 of the NBS. It outlines the data coding and cleaning procedures and describes the data problems identified, their origins, and the corrections implemented to create the final data file. The report describes the data issues by sections of the interview and concludes with a summary of types of problems encountered and general recommendations.
- ***User's Guide for Restricted and Public Use Data Files*** (current report). This report is designed to provide users with information about the restricted and public use data files including construction of the files; weight specification and variance estimation; masking procedures employed in the creation of the Public Use File; and a detailed overview of the questionnaire design, sampling, and NBS data collection. The report also contains some information covered in the two reports mentioned above, including procedures for data editing, coding of open-ended responses, and variable construction; and a description of the imputation and weighting procedures and development of standard errors for the survey.

In addition, the following supplemental materials are available from MPR or SSA upon request:

- ***NBS Questionnaire***. This document contains all items on the round 2 survey and includes documentation of skip patterns, question universe specifications, text fills, interviewer directives, and consistency and range checks.
- ***NBS Restricted Access and Public Use File Codebooks***. The codebooks provide extensive documentation for each variable on the file including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes. Frequency distributions and means are also included, as appropriate.

In the discussion that follows, we provide detailed information about the NBS to assist users of the round 2 public and restricted access data files. Chapter I offers an overview of the NBS and study objectives. In Chapter II we describe the sample design of the NBS. Chapter III provides an overview of the questionnaire design. Chapter IV explains the NBS data collection, including the locating and calling protocols for this survey. Chapter V is devoted to variable construction and editing, and provides information on the coding of verbatim and open-ended responses found in the NBS. Masking procedures employed in the creation of the Public Use File

are also discussed. Chapter VI explains the weighting, imputation, and variance estimates used in this survey. Finally, Chapter VII provides information about using the NBS data files, including weight specification and variance estimation.

***PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING***

## II. SAMPLE DESIGN

### A. OVERVIEW OF THE DESIGN

SSA implemented the TTW program in three phases spanning three years, with each phase corresponding to about one-third of the states. The initial NBS survey design called for four national cross-sectional surveys (called rounds) of Ticket-eligible SSA disability beneficiaries—one each in 2003, 2004, 2005, and 2006—and cross-sectional surveys of Ticket participants in each of three groups of states (Phase 1, Phase 2, and Phase 3 states)—defined by the year in which the program was rolled out (Bethel and Stapleton 2002).<sup>3</sup> This design was subsequently revised to accommodate Phase 1 data collection starting in 2004 rather than 2003. In addition, the final round was postponed to address the experiences of TTW participants under the new TTW regulations, implemented in July 2008. The fourth round will include a cross-sectional Representative Beneficiary survey as well as a survey of new Ticket Participants and is planned for 2009. Details of the sample design for round 4 are not yet determined; in a change from the original design, Ticket participants from previous rounds will not be re-interviewed.

One group of sample members in each of the first two cross-sectional surveys of Ticket participants will be followed longitudinally across rounds: Phase 1 sample members who were active in the TTW program in round 1, and Phase 2 sample members active in round 2. The

---

<sup>3</sup> The Ticket to Work program, implemented in 2002, was phased in nationwide over three years. In 2002, the first year of the program, SSA distributed Tickets in the following 13 states, known as the “Phase 1” states: Arizona, Colorado, Delaware, Florida, Illinois, Iowa, Massachusetts, New York, Oklahoma, Oregon, South Carolina, Vermont, and Wisconsin. The Phase 2 roll-out ran from November 2002 through September 2003, during which time SSA distributed Tickets in the following 20 “Phase 2” states and the District of Columbia: Alaska, Arkansas, Connecticut, Georgia, Indiana, Kansas, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Montana, Nevada, New Hampshire, New Jersey, New Mexico, North Dakota, South Dakota, Tennessee, Virginia, and the District of Columbia. The Phase 3 roll-out ran from November 2003 through September 2004, during which time SSA distributed Tickets in 17 “Phase 3” states: Alabama, California, Hawaii, Idaho, Maine, Maryland, Minnesota, Nebraska, North Carolina, Ohio, Pennsylvania, Rhode Island, Texas, Utah, Washington, West Virginia, and Wyoming, as well as in American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, and the Virgin Islands.

original sample design called for re-interviewing only those longitudinal cases that had completed the previous round. However, based on MPR’s recommendation, re-interviews will be attempted with all longitudinal cases. Table II.1 gives the original planned sample sizes for all rounds of data collection. The initial sampling and survey design documents are available from SSA upon request.

TABLE II.1  
NATIONAL BENEFICIARY AND TTW PARTICIPANT SAMPLE SIZES

Sample <sup>a</sup>	Year 1	Year 2	Year 3	Year 4	All Years <sup>c</sup>

<b>Total Sample Size</b>	<b>8,200</b>	<b>7,722</b>	<b>6,172</b>	<b>5,056</b>	<b>27,150</b>	

Source: NBS Sample Design Report (Bethel and Stapleton 2002).

<sup>a</sup> Sample sizes refer to number of completed interviews

<sup>b</sup>(1)=TTW participant longitudinal sample and (2)=TTW participant cross-sectional supplement

Thus, two surveys were fielded in round 1 (2004): the first national survey of all beneficiaries (the Representative Beneficiary Sample) and the first cross-sectional survey of Ticket participants in the Phase 1 states (the Ticket Participant Sample).

The NBS used a multi-stage sampling design (which was used for all survey rounds) with a supplemental single-stage sample for some Ticket participant populations. For the multi-stage design, data from SSA on the counts of eligible beneficiaries in each county were used to form the primary sampling units (PSUs) consisting of one or more counties. A stratified national

sample of 80 PSUs was selected; Los Angeles County and Cook County (Chicago) were selected with certainty because of the number of SSA beneficiaries in these counties. Because of the size of these two counties (in both beneficiary population and geographic area), Secondary Sampling Units (SSUs) were formed using zip codes of beneficiaries. Four SSUs were selected from Los Angeles County and two were selected from Cook County (Chicago). PSUs were selected with probability proportional to size of the beneficiary population in them. One PSU was selected twice because of the large number of beneficiaries in the included county, therefore the final number of PSUs selected was 79. The sample of all SSA beneficiaries (the Representative Beneficiary Sample) was selected from among beneficiaries residing in these PSUs/SSUs using age-defined sampling strata. The final sample size for the Representative Beneficiary Sample was 9,064.

These PSUs were also used to generate the Phase 1 Ticket Participant Sample for each of the three Ticket Program EN payment types (outcome-only, milestone-outcome, and traditional vocational rehabilitation).<sup>4</sup> Each phase of the Ticket program included only one-third of all states; therefore, the phase 1 sample was based on only one-third of the PSUs. The states in Phase 1 of the Ticket program included only one third of all states and, therefore, only one-third of the PSUs. For participants in one payment type (outcome-only), the number of Ticket participants in the clusters was insufficient to support the analytic objectives of the survey, so the clustered samples were supplemented by an independent unclustered sample of participants. The clustered Ticket Participant Samples were selected using the same PSUs, but due to the small

---

<sup>4</sup> ENs may choose to be paid under one of two payment systems: (a) an outcome payment system or (b) an outcome-milestone payment system. Under the outcome payment system, SSA will make up to 60 monthly payments to the EN for each assigned beneficiary who is not receiving SSDI or SSI payments because of work or earnings. Under the milestone-outcome payment system, SSA will pay the EN for up to four milestones achieved by a beneficiary who has assigned his or her Ticket to the EN.

number of Ticket participants, the Secondary Sampling Units were not used and the sample was drawn from all participants in the PSUs.<sup>5</sup> For participants in the outcome-only payment type, the unclustered sample was a stratified random sample using two strata: participants in the PSUs and participants outside of the PSUs. This stratification was needed to control the sample release. The final sample size for the Ticket Participant Sample was 1,466 (see Table II.2 for sample size by strata).

TABLE II.2  
ROUND 1 SAMPLE SIZES AND TARGET COMPLETES PER SAMPLING STRATA

Sampling Strata	Sample Size	Target Completes	Actual Completes
Beneficiary Sample	9,064	7,200	6,520
18 to 29 Years Old	2,514	2,000	1,818
30 to 39 Years Old	2,516	2,000	1,788
40 to 49 Years Old	2,516	2,000	1,816

## B. TARGET POPULATION

The target population for both the Representative Beneficiary Sample and the Ticket Participant Sample consisted of SSI and SSDI beneficiaries between the ages of 18 and 64. For

---

<sup>5</sup> Participants of the Ticket program are also SSA beneficiaries and these samples of participants are designed to support the more detailed analysis required for the evaluation of the program. We anticipated that some Ticket participants would be selected in the beneficiary survey (and a small number of Ticket participants were selected in both samples).

the Representative Beneficiary Sample, the target population included beneficiaries in all 50 states and the District of Columbia who were in active pay status as of June 2003.<sup>6</sup> There were two subpopulations of these beneficiaries who are not eligible for Ticket participation but were included in the survey samples to give complete coverage of the national beneficiary population:

- Beneficiaries who were designated as Medical Improvement Expected (MIE) at the time they received their allowances and who have not yet completed a first Continuing Disability Review (CDR)
- Young SSI recipients who were receiving benefits because of their eligibility as a child, and were in the process of completing a re-determination under the adult eligibility criteria.

The beneficiary target population included approximately 9.4 million persons; approximately 1.9 million beneficiaries were in the sampled PSUs.

For the Ticket Participant Sample, the target population included beneficiaries who had used the Ticket at least once as of January 1, 2003, or between January 1, 2003 and September 29, 2003. For the Ticket participants, the study population was constrained by the TTW roll-out schedule. The target population for the round 1 included beneficiaries who were participants in SSA's Ticket to Work program in the Phase 1 roll-out states. Participants were assigned to a phase for this study on the basis of their address at the time of program roll-out regardless of their current address. Thus, a Phase 1 participant (early state rollout) might reside in any state at the time of the survey. The target population for the phase 1 participant sample included 21,477 beneficiaries.

---

<sup>6</sup> Beneficiaries in the Trust Territories and Puerto Rico were excluded from the survey target population.

### **C. PRIMARY SAMPLING UNIT FORMATION AND SELECTION**

PSUs were needed for both the Representative Beneficiary Survey and the Ticket Participant Survey and were constructed using county-level beneficiary counts. Based on the design report for the TTW Evaluation (Bethel and Stapleton 2002), the design for the Representative Beneficiary Survey called for 80 PSUs to be formed from counties or groups of counties. The design report also recommended that in the geographically largest PSUs, Secondary Sampling Units (SSUs) would be formed based on zip codes, and a sample of these would be selected. The clustered Ticket Participant Sample was selected in the same manner as the Representative Beneficiary Sample using the same PSUs, but due to the small number of Ticket participants, the Secondary Sampling Units were not used and the sample was drawn from all participants in the PSUs. To construct the PSUs, county-level counts of beneficiaries in four age strata (18-24, 25-39, 40-54, and 55-64) and a composite size measure were used (Folsom et al. 1987). The composite size measure incorporates the count of beneficiaries and the desired sampling rate of beneficiaries in each age stratum and permits equal probability of selection of beneficiaries within each age stratum across PSUs and approximately equal workload in each PSU. To form the PSUs, counties were ordered within each state by geography using a score based on latitude and longitude. An eligible PSU needed a composite size measure above a specific level to ensure that adequate counts of beneficiaries existed in each of four sampling strata. The PSUs were also evaluated on the basis of geographic size (square miles), topography (lakes, rivers, and mountain ranges) and transportation access among counties in a PSU (roadways in mountainous areas and bridges around the Great Lakes).

In total, 1,330 PSUs were formed with 48 percent (664 PSUs) having a single county; 84 percent (1,118 PSUs) had three or fewer counties. Of the 1,330 PSUs, just 30 (2.2 percent) included 10 or more counties; mostly rural areas in Western states.

For sample selection of PSUs, the PSUs were stratified explicitly by the Ticket program's three phases (each according for approximately one-third of the states). Based on the selection frequencies for the PSUs computed using the composite size measure, two PSUs were classified as certainty PSU selections (Los Angeles County and Cook County (Chicago)). Because of the size of the Los Angeles County selection frequency, this PSU was allocated twice the sample size allocated to the others. To complete the sample of 80 PSUs, we selected 77 other non-certainty PSUs with probability proportional to the composite size measure within each of Ticket phase strata. The selection of the PSUs were controlled implicitly by SSA region, state within SSA region, and a beneficiary weighted score (from 0 to 9) based on the 2003 Urban Influence Code (Area Resource File 2003). In the Phase 1 states, 23 PSUs were selected, and in the Phase 2 states, 25 PSUs were selected. In Phase 3 states, 31 PSUs were selected (as noted previously, the Los Angeles County PSU accounted for two PSU selections).

In the Los Angeles and Chicago certainty PSUs, Secondary Sampling Units were formed using counts of beneficiaries in each stratum for five-digit zip codes and the composite size measure. Once again, SSUs consisted of one or more zip code areas such that the aggregate composite size measure exceeded the criterion value. In the Los Angeles PSU, 62 SSUs were formed and four were selected with probability proportional to the composite size measure. In the Chicago PSU, 44 SSUs were formed and two were selected with probability proportional to the composite size measure.

#### **D. STRATA DEFINITIONS AND SAMPLE SIZES**

The sample is designed to be statistically and operationally efficient and to provide adequate sample sizes for the planned analyses. In order to ensure a sufficient number of persons seeking work, the Representative Beneficiary Sample was classified into sampling strata based on age, with persons in the younger age categories selected at higher rates than those in the oldest age

category. The Representative Beneficiary Sample was divided into the following age groups: 18-24, 25-39, 40-54, and 55-64, which were used as the sampling strata. The target number of completed interviews for round 1 was 2,000 beneficiaries in each of the three younger age groups (18-24, 25-39, and 40-54). For the 50-64 age cohort, the target number of completed interviews was 1,200 beneficiaries.

The sampling strata for the Ticket Participant Samples were defined by the payment system. For Ticket participants, services received from ENs can be provided under three program payment systems: (1) outcome-only, (2) milestone-outcome, or (3) under the traditional vocational rehabilitation reimbursement system (see the “Evaluation of the Ticket to Work Program Initial Report,” Thornton, et al., (2004), for more information about the EN program payment systems). Because the use of the outcome-only payment type was low among Phase 1 participants, both a clustered and unclustered sample of participants was selected for this payment type. The samples of participants using the milestone-outcome and traditional payment types were limited to the clustered sample. The target number of completed interviews for participants at round 1 was 1,000 overall, with a target of approximately 333 in each payment type stratum.

In order to statistically combine the clustered and unclustered samples, we needed to establish comparability between the portions of the samples related to the data collection effort because, while both samples received central office locating and telephone interviewing, only the clustered sample received field locating and in-person interviewing. Sample members in both the clustered and unclustered samples underwent the same level of central office locating activities (including batch processing through search databases and individualized locating efforts) to identify a telephone number so that a telephone interview could be attempted. For the unclustered sample, beneficiaries who could not be located or who required an in-person

interview were “closed out” and classified as ineligible. For the clustered sample, beneficiaries who could not be located or who required an in-person interview were eligible for a field follow-up and were assigned to field locators/interviewers. The sample members in both the clustered and unclustered samples were comparable up to the point of assignment of sample members for field work. The samples from the clustered and unclustered sample before assignment for field work could be statistically combined because the two samples represented the same subpopulation. (Ticket participants who could be located by central office locating efforts and interviewed by telephone). The sample members in the clustered sample who were assigned for field work represented a subsample of sample members representing the subpopulation who required field work for locating and interviewing.

For fielding purposes in both the Representative Beneficiary Sample and the Ticket Participant Samples, we selected two and a half to three times as many cases as we needed (called the augmented sample) to ensure an adequate pool of sample would be available if we found that the response and eligibility rates during data collection differed from our initial assumptions. Within each stratum, an equal probability sample of beneficiaries or participants was selected using a sequential selection algorithm with the sampling frame sorted by disability diagnosis, race/ethnicity and zip code. These sorting factors ensured an approximate proportional allocation of the sample across levels of these factors and, therefore, enhance the face validity of the sample across these factors.

For the Representative Beneficiary Sample, we selected for the augmented sample 6,000 beneficiaries in each of the three younger age groups (18-24, 25-39, and 40-54) and 3,600 beneficiaries in the oldest age cohort. For augmented samples of the Ticket participants, we selected approximately 1,000 participants in each payment type stratum. These augmented samples were randomly partitioned into subsamples (called “waves”) to allow controlled release

of sample throughout the data collection effort. During the data collection period, we monitored the sample results and determined whether, and in which strata and PSUs, additional waves of sampled cases were needed.

### III. QUESTIONNAIRE DESIGN

The NBS collects data on a wide range of topics including employment, disability, experience with a variety of SSA programs, employment services used in the past year, health and functional status, health insurance, income and other assistance, and sociodemographic information. The survey items were developed and initially pre-tested as part of a separate contract held by Westat. Revisions were made by MPR to prepare the instrument for CATI/CAPI programming, and additional minor wording changes were made after pretesting. The survey instrument is available from MPR upon request (Mitchell et al. 2004).

To promote response among Hispanic populations, the questionnaire was translated into Spanish. In some cases, because the Spanish speaker was more familiar with a word or term in English than in Spanish, the term was provided in both languages so that interviewers could reinforce the question by using the second language as a probe, if necessary.<sup>7</sup> Measurements were treated in a similar way. Thus, questions that mentioned a specific weight also mentioned the kilogram equivalent.<sup>8</sup> Interpreters were used as needed to conduct interviews in languages other than Spanish.

#### A. QUESTIONNAIRE SECTIONS

The questionnaire is divided into 13 sections, labeled A through M:

- Section A—Introduction and Screener

---

<sup>7</sup> For example, on item L-5: Did {you/NAME} receive any food stamps last month? Spanish: Recibió {usted/NAME} food stamps o cupones de alimentos el mes pasado?

<sup>8</sup> For example, on item Jb-10: {Do you/Does NAME} have any difficulty lifting and carrying something as heavy as 10 pounds, such as a full bag of groceries? Spanish: Tiene {usted/NAME} cualquier dificultad en levantar y cargar algo que pesa hasta unas 10 libras {4½ kilos}, tal como una bolsa llena con compras del mercado?

- Section B–Disability and Current Work Status
- Section C–Current Employment
- Section D–Jobs/Other Jobs During 2003
- Section E–Awareness of SSA Work Incentive Programs and Ticket to Work
- Section F–Ticket Non-Participants in 2003
- Section G–Employment-Related Services and Supports Used in 2003
- Section H–Ticket Participants in 2003
- Section I–Health and Functional Status
- Section J–Health Insurance
- Section K–Income and Other Assistance
- Section L–Sociodemographic Information
- Section M–Closing Information and Observations.

Detailed descriptions of each section are provided below:

### **1. Section A–Introduction and Screener**

This section confirms that the correct sample person has been contacted and verifies that the sample person is still eligible for the survey. In addition, the screener allowed interviewers to:

- Identify any barriers to participation and, if needed, identify a proxy respondent. The sample member was offered every opportunity to complete the interview himself or herself, and a proxy was only accepted if necessary
- Identify the need for an interpreter for a respondent who spoke a language other than English or Spanish
- Administer a cognitive assessment to ensure that the respondent would be capable of completing the survey.

Due to the complexity of the survey, a cognitive assessment was administered to respondents (both sample persons and proxy respondents) prior to the interview. Respondents were read three questions (a brief description of what it meant that the survey was confidential,

what it meant that the survey was voluntary, and an overview of the study topics) and asked to reiterate the concepts in his or her own words. If the respondent was not able to restate a concept, the question was read a second time. If the respondent could not restate a concept after being asked a second time, he or she was asked if there was someone else who could answer questions about his or her health, daily activities, and any jobs he or she might have (such as a friend, parent, caseworker, or payee). An interview was then pursued with the proxy respondent. To minimize bias in reporting, attitudinal and opinion items were skipped: Proxy respondents were not asked to provide subjective assessments on behalf of the sample person; for example, regarding satisfaction with jobs or programs. The constructed variable C\_Rtype indicates whether the sample person or a proxy completed most of the interview.

## **2. Section B–Disability and Current Work Status**

This section collects information on the beneficiary’s limiting physical or mental condition(s) and current employment status. If the beneficiary is not currently employed, the section explores reasons for not working. This section also includes questions designed to determine the job characteristics that are important to beneficiaries and collects information about work-related goals and expectations.

## **3. Section C–Current Employment**

Questions in this section collect detailed information about the beneficiary’s current job(s). Respondents are asked about the type of work performed, type of employer, hours worked, benefits offered, and wages earned. The section also asks about work-related accommodations received, as well as those needed but not received. Other questions solicit information about job satisfaction.

#### **4. Section D–Jobs/Other Jobs During 2003**

This section collects information about employment during the 2003 calendar year, including type(s) of employer(s), hours worked, wages earned, and reasons for leaving employment, if applicable. Other questions ask whether beneficiaries worked or earned less than they could have (and if so, the reasons why), and collect information about experiences related to Social Security benefit adjustments due to work.

#### **5. Section E–Awareness of SSA Work Incentive Programs and Ticket to Work**

This section includes questions designed to assess whether the beneficiary is aware of, or is participating in, specific SSA work incentive programs and services. For the Ticket to Work program, information is collected on how beneficiaries learned about the program, the names of the providers they signed up with, and dates they signed up with their service providers.

#### **6. Section F–Ticket Non-Participants in 2003**

This section is administered to beneficiaries not participating in the Ticket to Work program and collects data on reasons for non-participation. It asks whether the beneficiary has attempted to learn about employment opportunities (including Ticket to Work), problems the beneficiary may have had with Employment Networks or other employment agencies, and how those problems were handled or resolved.

#### **7. Section G–Employment-Related Services and Supports Used in 2003**

Questions in this section ask beneficiaries about their use of employment-related services in calendar year 2003, including the types of services received, the types of providers used, how long they received services, how the services were paid for, and reasons for and satisfaction with service utilization. Other questions ask about sources of information about services and the nature of any services that were needed but not received.

## **8. Section H–Ticket Participants in 2003**

This section asks 2003 Ticket to Work participants about their experiences with the program, including information related to their decision to participate in the Ticket program, the kinds of information they used to pick their current service providers, development of the individual work plan (IWP), and any problems experienced with services provided by an Employment Network. The section also includes a series of questions about how problems with Employment Networks were resolved and overall satisfaction with the Ticket to Work program.

## **9. Section I–Health and Functional Status**

This section includes questions about the beneficiary’s health status and everyday functioning, including the need for special equipment or assistive devices. Information is solicited regarding general health status (via the SF-8<sup>TM</sup> scale),<sup>9</sup> difficulties with Activities of Daily Living (ADLs) and Instrumental Activities of Daily Living (IADLs), a variety of functional limitations, substance abuse/dependence (using the CAGE Alcohol Abuse Screener),<sup>10</sup> and treatment for mental health conditions.

## **10. Section J–Health Insurance**

Questions in this section collect information about the sources of health insurance coverage, both at the time of interview and during calendar year 2003.

<sup>10</sup> See Mayfield, D., McLeod, G., Hall, P. (1974). The CAGE questionnaire: Validation of a new alcoholism instrument. *American Journal of Psychiatry* 131, 1121-1123.

### **11. Section K–Income and Other Assistance**

Questions in this section ask about sources of income, including income received from earnings, Social Security, workers’ compensation, and other government programs and sources.

### **12. Section L–Sociodemographic Information**

This section collects basic demographic information about the beneficiary, such as race, ethnicity, education, parental education, marital status, living arrangements, and household income.

### **13. Section M–Closing Information and Observations**

In this section, address information is collected for the sample person, and telephone information for up to two contact people is collected for participants who may be selected for future survey rounds. The interviewer also records reasons a proxy or assistance was required, if appropriate, and documents special circumstances.

## **B. QUESTIONNAIRE PATHING AND RESPONDENT TYPE**

Sample members in the Representative Beneficiary Sample and the Ticket Participant Sample received the same version of the NBS questionnaire. Pathing to questions about participation in the TTW Program was not based on sample type, but rather to answers given to items in previous sections (awareness of the program and use of the Ticket). Similarly, both CATI and CAPI respondents received the same questionnaire.

All respondents were asked questions from sections A, B, E, G, I, J, K, L, and M. Only respondents who reported that they were currently working were asked questions from section C. Similarly, only respondents who reported working in 2003 were asked questions in section D. Section F was asked of respondents who reported that they had never tried to get a Ticket from SSA, had never tried to use a Ticket to sign up with a provider, or were not signed up with a

provider in 2003. Only respondents who reported using their Ticket to sign up with a provider in 2003 were asked questions from section H. See Table III.1 for a summary description of the main questionnaire pathing.

The NBS instrument, which is programmed in Blaise, is complex and involves numerous integrated skips, within and across sections. Further complexities in questionnaire pathing are introduced by the utilization of preloaded SSA administrative data and allowances for proxy participation. Preloaded data about respondents' disability-benefits status (SSI, SSDI, or both), the phase of TTW program roll-out, age at which they first received SSI benefits, and TTW participant status, determine pathing for certain survey items. Other administrative variables are used as fills at particular items to provide respondents with local names of programs or to prompt recognition of program participation. See Table III.2 for a complete list and description of preloaded variables.

Finally, since proxies are necessary when the sample member's disability precludes participation, the instrument was programmed to fill the proper pronoun or name in the question text after the interviewer indicated who the survey respondent would be (sample member or proxy). Additionally, attitudinal and opinion items were skipped for proxy respondents so as to minimize bias in reporting. (See Table III.3 for a complete list of items that were not asked of proxy respondents.) Proxy interviews were completed for 1,999 cases.

TABLE III.1  
NBS INSTRUMENT SECTIONS

Section	Title of Section	Respondents Receiving the Section
A	Screener	All respondents
B	Disability/Current Work Status	All respondents
C	Current Employment	Respondents who answer (B24 = YES) Question B24: Are you currently working at a job or business for pay or profit?
D	Jobs/Other Jobs During 2003	Respondents who answer (B30 = YES) Question B30: Did you work at a job or business for pay or profit anytime in 2004?
E	Awareness of SSA Work Incentive Programs and Ticket to Work	All respondents
F	Ticket Non-Participants in 2003	Respondents who answer (E35 = NO, DON'T KNOW, OR REFUSED) Question E35: Did you ever try to get a Ticket from Social Security or anywhere else? OR Respondents who answer (E36 = NO, DON'T KNOW, OR REFUSED) Question E36: Have you ever used your Ticket to sign up with an Employment Network? OR Respondents who answer (E37 = NO, DON'T KNOW, OR REFUSED) Question E37: Were you signed up with any Employment Network or a State Vocational Rehabilitation Agency at any time in 2003?
G	Employment-Related Services and Supports Used in 2003	All respondents
H	Ticket Participants in 2003	Respondents who answer (E37 = YES) Question E37: Were you signed up with any Employment Network or a State Vocational Rehabilitation Agency at any time in 2003?
I	Health and Functional Status	All respondents
J	Health Insurance	All respondents
K	Income and Other Assistance	All respondents
L	Sociodemographic Information	All respondents
M	Closing Information and Observations	All respondents

Source: NBS, round 1.

TABLE III.2  
SURVEY PRELOADS

Variable	Definition	Purpose
Bstatus	SSA benefit type (SSI only, SSDI only, or SSI and SSDI) received by sample member.	Used to determine pathing for awareness of SSA work incentive items. Only respondents who received SSDI benefits were asked items E3-E13. Only respondents who received SSI were asked items E15-E18.
DOB	Sample member date of birth.	Reported date of birth (or age) was matched with administrative data to verify that the correct person was contacted in the screener portion of the survey.
ENsample	Name of the Employment Network (EN) to which the sample member's ticket was assigned at the time the TTW Participant Sample was drawn.	Used as a fill at E24 to prompt TTW participants who responded that they had never heard of the TTW program. This item reminds respondents that according to SSA, the sample person's ticket was assigned to this EN (as of the date the sample frame was drawn).
LocalPAA	Name of Local Protection and Advocacy Group in the sample member's state of residence (as reported at time of survey).	Used at items H52, H53, H54, and H55 to identify, by name, the Protection and Advocacy Group in the respondent's area.
Phase	Phase of TTW roll-out. Based on the sample member's state of residence at the time the sample frame was drawn. <sup>a</sup>	Used to determine pathing at item B32 (worked for pay before November 1, 2003). Only respondents who worked for pay in 2003 and who resided in a Phase 3 roll-out state were asked this item.
SDate	Date sample frame drawn for TTW participants.	Used as fill at E24 to prompt TTW participants who responded that they had never heard of the TTW program. This item reminds respondents that according to SSA, the sample person's ticket was assigned to an EN (as of the date the sample frame was drawn).
SSIage	Age at which sample member first received SSI benefits.	Used to determine pathing at items E11 and E12. Only respondents who received SSI before the age of 22 (and who were also 25 or younger) received these items.
StateMed	State name for Medicaid. Based on state of residence reported at time of survey.	Used at item J2 to identify, by name, the Medicaid program in the respondent's state.
Tstatus	Ticket status at the time the sample frame was drawn.	Used to determine pathing at item E24. Only respondents identified by SSA as being Ticket participants, and who indicated that they had never heard of the TTW program, were asked this item.

TABLE III.2 (continued)

Variable	Definition	Purpose
VRname	State name for Vocational Rehabilitation Agency. Based on state of residence reported at time of survey.	Used at items B29, E28, E30, E32, F2, F6, F8, F10, F20, F29, H7, H12, H16, H18, H21, and H52 to identify, by name, the Vocational Rehabilitation Agency in the respondent's state.

Source: NBS, round 1

<sup>a</sup> The TTW program was implemented in three phases. In Phase 1, which began in February 2002, the program was rolled out in 13 states across the country. In Phase 2, which began in November 2002, the program was extended to an additional 20 states, plus the District of Columbia. In Phase 3, which began in November 2003, TTW was implemented in the remaining 17 states and U.S. territories (Thornton et al. 2004).

TABLE III.3  
ITEMS SKIPPED FOR PROXY RESPONDENTS

Survey Item	Question Text
C18	Taking all things into account, how satisfied are you with your {main/current} job? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?
C39a-C39l	Thinking about your {main/current} job, how much do you agree with each of the following statements? Would you say you strongly agree, agree, disagree, or strongly disagree?
C39a	The pay is good
C39b	The benefits are good
C39c	The {job security is good/work is steady}
C39d	You have a chance for promotion
C39e	You have a chance to develop abilities
C39f	You have recognition or respect from others
C39g	You can work on your own in your job if you want to
C39h	You can work with others in a group or team if you want to
C39i	Your work is interesting or enjoyable
C39j	Your work gives you a feeling of accomplishment or contribution
C39k	Your supervisor is supportive
C39l	Your co-workers are friendly and supportive
H10a-H10d	Now I'm going to read you some statements about the Ticket to Work Program. For each statement, please tell me if it is something you knew before today or not. Is this something you knew before today or not;
H10b	You can, during any month, take back your Ticket and give it to another Employment Network or participating provider.
H10c	To remain in the program, you must participate in the activities described in your individual work plan during the first few years, and work for 3 to 6 months each year during the later years of your participation.
H10d	While you are working, you can keep your Medicare and /or Medicaid benefits.
H11	Before you started participating, how much would you say you knew about the Ticket to Work Program? Would you say a lot, some, a little, or nothing?
H45	Overall, how satisfied are you with the Ticket to Work program? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?
H58	How satisfied are you with how the problem (with the SVR/EN) was solved? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?
H59	Overall, how satisfied are you with the helpfulness of the {State VR/EN} in trying to solve this problem? Would you say very satisfied, somewhat satisfied, not very satisfied, or not at all satisfied?

## C. COMPARISONS WITH OTHER QUESTIONNAIRES AND SURVEYS

The NBS contains a number of questions that are found on other survey instruments. Table III.4 provides the names of the studies from which NBS questions have been drawn, their sponsors (where relevant), and the NBS question number. In some instances, the question was asked on multiple studies, in which case all studies are listed.

TABLE III.4  
NATIONAL BENEFICIARY QUESTION SOURCES

#### **D. SPECIAL DESIGN CONSIDERATIONS**

The NBS survey population represented a wide range of disabilities with varying degrees of severity; in addition, some sample members had several disabling conditions. While, the survey could not be designed to overcome all possible challenges, the instrumentation procedures attempted to address three broad categories of common challenges: (1) communication, (2) stamina, and (3) cognitive barriers. Communication challenges include both hearing and speech impairments. “Stamina challenges” include physical and mental fatigue. Cognitive challenges include, but are not limited to, emotional disturbance, difficulty processing questions and responses, lack of complete or specific knowledge, and confusion about the purpose of the interview (Mitchell et al. 2004).

The NBS survey featured several design techniques designed to overcome these challenges. The interviews could be conducted via text typewriter (TTY), Telecommunications Relay Service (TRS), or instant messaging so that persons with severe hearing or speech impairments could be interviewed by telephone. In addition, to maximize survey participation, in-person interviewers obtained the services of sign language translators and made a range of other accommodations when interviewing persons with hearing impairments in their home.

Structured probes were included in the survey instrument which allowed questions to be rephrased and concepts defined in a standard manner in the event that respondents required clarification or additional information. Additionally, to minimize item nonresponse, the survey instrument included follow-up questions for continuous variables. For example, if a respondent could not provide an exact amount, the “Don’t know” response was followed with a modified version of the question that offered response categories. The upper and lower bounds of each category were based on ranges specified by analysts.

All respondents were notified in the introduction to the study that if they began to feel tired the interviewer could stop and the interview could be completed at a later time. Interviewers were also trained to check with respondents about their level of fatigue during the interview. If they sensed that a respondent was tiring, they repeated this and asked the respondent if he or she was OK to continue. The instrument was set up so that the interview could be broken off at any time and a call-back time scheduled. In round 1, only 832 cases (about 8 percent of the total sample) were broken off after the interview began (that is after the screener and cognitive items had been administered and the respondent was in the body of the questionnaire). Of these, 684 cases were later completed (82 percent); 148 were not completed (18 percent).

In general, we attempted to word survey questions simply, clearly, and briefly as well as in an unbiased manner so that respondents could readily understand key terms and concepts. Given the intent of the questions, response categories were appropriate, mutually exclusive, and reasonably exhaustive.

## IV. DATA COLLECTION

The NBS was executed as a dual-mode survey. Initial interview attempts were made using computer-assisted telephone interviewing (CATI) followed by computer-assisted personal interviewing (CAPI) of nonrespondents. CAPI interviews were attempted with respondents who requested an in person interview, those who needed an in-person interview to accommodate a disability, and those did not have telephones or whose telephone number could not be located. If a sample person was not able to participate in the survey due to his or her disability, a proxy respondent was sought. If no proxy was available and an in-person interview was not possible, the final status of the case was classified as a nonresponse. Sample persons or proxies who requested an in-person interview and who were eligible for field follow-up were held for the start of CAPI data collection.

CATI data collection began in February 2004.<sup>11</sup> In person locating and interviewing of telephone nonrespondents and beneficiaries who requested an in-person interview began in May 2004 and continued, concurrent with CATI interviewing, through October 2004. In total 7,603 cases were completed (including 23 partial completes)—6,520 from the Representative Beneficiary Sample and 1,083 from the Ticket Participant Sample.<sup>12</sup>

### A. PRETEST

MPR conducted a CATI pretest in December 2003 to test the programmed instrument prior to fielding. The primary objectives of the pretest were to ensure that the instrument was clear and

---

<sup>11</sup> Interviewing began approximately eight months after the sample was selected.

<sup>12</sup> Partial interviews were considered complete if responses were provided through section H of the interview (or if the respondent was not eligible to receive section H, through section G of the interview).

understandable to respondents and to test interviewer usability. The pretest sample was selected from beneficiaries and TTW participants who were not living in the sampled PSUs. Cases selected for the pretest were not included in the main survey sample. Given their rarity, outcome-only TTW participant cases were excluded from the pretest. Hearing-impaired respondents were oversampled so that procedures for interviewing via teletypewriter (TTY) could be tested. Ticket participants were also oversampled to ensure an adequate test of the participant query paths.

Seven hundred cases across six sampling strata were released for the pretest sample. For the beneficiary sample, strata were formed by four age groups (18-29, 30-39, 40-49, and 50-64); for the participant sample, strata were formed by two EN payment types (milestone-outcome and traditional). The goal was to complete at least 10 interviews within each stratum.

Overall, 74 pretest interviews were completed. Thirty-two interviews were completed with participants (16 milestone-outcome and 16 traditional) and 42 with nonparticipants. Of these, eight cases were completed with proxy respondents. Two TTY interviews were completed and two more were partially completed. As a result of the pretest, minor instrument changes were identified and programming problems corrected prior to full-scale CATI interviewing.

## **B. DATA COLLECTION PROCEDURES**

### **1. Advance Contacts**

In an effort to increase respondent trust and rapport, all sample members for whom MPR had a valid address were sent an advance letter and a list of frequently asked questions and answers before the start of data collection. The advance letter, printed on SSA letterhead and signed by an SSA official, identified SSA as the sponsor of the survey and MPR as the survey contractor, explained the purpose of the survey, offered assurances of confidentiality, described the voluntary nature of participation, and included a toll-free number, a TTY number, and an e-

mail address for respondents to use to contact MPR with questions or to complete the interview at their convenience. To encourage participation and show appreciation for response, a post-paid incentive payment of \$10 was offered to respondents who completed the survey. The advance letters indicated that the interview could be conducted in the sample person's home if he or she was unable to respond by telephone because of a disability.

In an additional effort to help establish legitimacy, SSA posted information about the survey on the agency Web site and circulated information describing the survey to SSA field offices and the SSA teleservice (800) center. Field offices and the SSA teleservice (800) center were also sent the names of telephone and in-person interviewers involved in the NBS so that these individuals could be identified as legitimate contacts. If upon receipt of the advance letter, disability beneficiaries contacted their local field office or the SSA 800 number with questions about the survey or its legitimacy, SSA staff could then assure beneficiaries of the study's legitimacy and encourage them to participate.

## **2. Interviewer Training**

CATI interviewers received 14 hours of training over four sessions in February 2004. The CAPI interviewers were trained in three separate 24-hour trainings with each training split across three days. The NBS training included providing interviewers with the background and purpose of the study, a question-by-question review of the instrument, contact protocols, refusal avoidance strategies, and a series of practice interviews. In addition, sensitivity training was included, emphasizing the importance of patience, professionalism, and showing unconditional positive regard for respondents regardless of their impairments. Trainers stressed that the greatest barriers faced by people with disabilities are often others' prejudgments and erroneous images of them. Interviewers were trained to use positive rather than patronizing language and were encouraged to focus on the individual first and the disability last.

To overcome stamina challenges, interviewers were trained to be aware of behaviors that might indicate that a respondent was too fatigued to continue. If a respondent seemed tired, agitated, or distracted, for example, interviewers were encouraged to ask whether the respondent needed to take a break and schedule another time to continue and to set appointments for times when the respondent was most alert. To overcome cognitive challenges, the training focused on neutral, nondirected probing methods (repeating the question, repeating the response categories, asking for more information, stressing generality, stressing subjectivity, and zeroing in) and using active listening skills and patience. Interviewers were instructed to provide neutral feedback and encouragement throughout the survey. They were trained to help keep the respondent free of distractions, to say the respondent's name often, and to avoid using an exaggerated inflection or tone of voice.

### **3. Locating**

Sample member contact information was provided by SSA from administrative records. Prior to the mailing of the advance materials, all addresses were verified or updated using a commercially available database. Over the course of the round 1 data collection, 44 percent of telephone numbers initially provided were identified as invalid and were sent to central office locating. MPR used a variety of techniques for locating updated information, including database searches, calling relatives and friends, receiving updated contact information from SSA, and making in-person visits for field locating. Due to these efforts, approximately 92 percent of the sample was eventually located for interviewing. Of the located sample, 79 percent completed the interview.

#### **4. CATI Data Collection**

CATI data collection began in February 2004. In total, 6,302 cases were completed by telephone (83 percent of completes). Eighty-two percent of the Representative Beneficiary Sample completes (n=5,342) and 89 percent of the Ticket Participant Sample completes (n=960) were completed via CATI. Approximately 50 percent of the total completes were obtained before the start of CAPI data collection (May 2004). The NBS took, on average, 50 minutes to administer. The interview length ranged from 15 to 180 minutes excluding TTY, TRS, and instant messaging interviews.

##### **a. Assistive Technologies**

Several technologies were available to assist with interviewing deaf and hard-of-hearing sample persons by telephone including phone amplifying volume controls, an in-house TTY machine, TRS, and instant messaging. To minimize respondent burden when using TTY, TRS, and instant messaging, an electronic version of the instrument was maintained that included standard TTY abbreviations and punctuation [such as “ga” (go ahead), “nu” (number), “oic” (oh, I see)], which interviewers could use to “cut” the question text from the electronic file and “paste” into the TTY text box or instant messaging screen to ask a question. Respondents’ answers were then entered into the computerized survey instrument on a second PC. Despite these efforts, the average length of a TTY interview was considerably longer than that of a non-TTY interview. For round 1 of the NBS, the average time to complete a TTY interview was three hours and often required several sessions. The shortest TTY interview was one and a half hours in one session, the longest was five hours over three sessions. Interviews conducted by instant messaging were generally about one-third shorter than those using TTY.

For round 1, we identified 61 respondents who needed to be interviewed by TTY, TRS, or instant messaging. (Another five cases called our help desk via a Relay Operator and completed

the interview on the spot.) Of these, 37 cases eventually completed the interview: 15 by TTY, 9 by TRS, 4 by instant messaging, and 9 using some combination of the three methods. The remainder either did not answer the TTY call or refused, usually citing length of the interview.

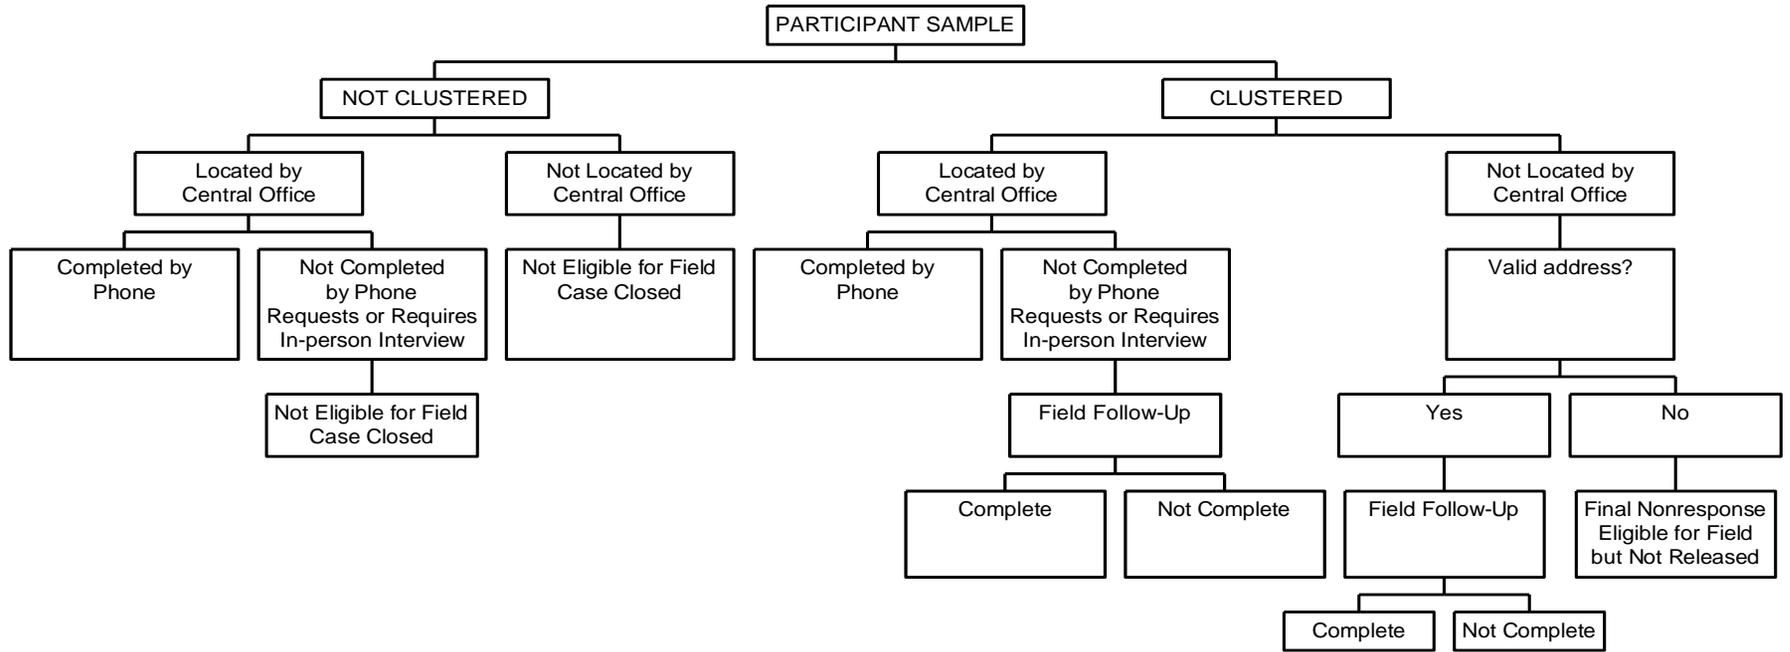

## **5. CAPI Data Collection**

In-person interviewing was employed to maximize access to the survey among persons with disabilities. In-person administration can facilitate interviewing of persons with hearing and speech limitations who are unable to participate by telephone, can permit in-person assistance to persons with cognitive challenges, and can improve the locating rate through in-field searching (Mitchell et al. 2004). To control costs, attempts were first made to contact and interview sample persons via telephone. CAPI interviews were then offered to anyone who requested an in-person interview or who needed an in-person interview to accommodate a disability.

All cases referred for in-person interviewing (refusals, those who were evasive to telephone attempts, and those who requested an in-person interview) were first sent to central office locating. Locating verified or updated the telephone and address if possible before the case was assigned to a field interviewer and provided the field interviewer with a listing of previous addresses. Additionally, cases for which a telephone number could not be located were flagged for CAPI follow-up. As discussed in Chapter II, the unlocated, unclustered outcome-only Ticket Participant Sample was not eligible for CAPI field treatment. For the purpose of data collection, clustered and unclustered cases were subjected to identical predetermined central office locating procedures. Once central office locating was exhausted, clustered cases were sent to the field for in-person locating and unclustered cases were put on hold and received no further locating treatment. See Figure IV.1 for a summary of the CAPI Ticket Participant Sample administration.

FIGURE IV.1

NATIONAL BENEFICIARY SURVEY - SAMPLE ADMINISTRATION

In all, 3,109 cases, or approximately 30 percent of the total sample, were sent to CAPI interviewers to be conducted in-person. Of these, 55 percent were completed; 394 (13 percent) via CATI, and 1,301 (42 percent) by field interviewers. Field interviewers were trained to encourage sample persons to call in and complete the survey by telephone once they were located to save on data collection costs. Eighteen percent of the Representative Beneficiary Sample completes (n=1,178) and 11 percent of Ticket Participant completes (n=123) were obtained via CAPI.

Most cases that were sent to the field (63 percent) were sent because they could not be located or did not have a telephone. Another 20 percent were sent to the field because the sample person initially refused a CATI interview. An additional 16 percent were sent to the field because they were difficult to contact via telephone or had evaded contact efforts. The remaining one percent of cases were sent to the field because they requested an in-person interview.

To ensure that the highest-quality CAPI data were collected, several Quality Assurance (QA) procedures were in place. Early CAPI data were reviewed for the frequency of item nonresponse and other data problems. Using this information, feedback and additional instruction were given to interviewers who needed it. Second, interview length was checked for patterns of especially lengthy or short interviews, since consistently short or long interviews might indicate data forgery or other problems. Finally, 10 percent of each interviewer's cases were randomly selected and verified by either telephone or mail. During the verification, respondents were asked how long the interview lasted, whether the interviewer used a laptop, and what types of questions were asked. In addition, some questions were re-asked to ensure that the answers are the same as those recorded during the interview.

## **6. Assisted Interviews and Proxy Respondents**

To increase opportunities for self-response, “assisted” interviews were also permitted. These interviews were different from proxy interviews because beneficiaries answered most questions themselves. The assistant, typically a family member, provided encouragement, interpretation, and verified answers when needed. In the NBS, we allowed assisted interviews in order to minimize item nonresponse, improve the accuracy of responses, and overcome less limiting conditions (such as difficulty hearing) and language barriers. In all, 275 assisted interviews were conducted (less than 1 percent of all completes) during round 1.

As a last resort, proxy respondents were used to complete the survey on behalf of respondents who could not complete the survey themselves (even with assistance) either by telephone or in-person. This included sample persons with severe communication impairments, those with severe physical disabilities that precluded participation (in any mode), and those with mental impairments that might have compromised data quality. Using the beneficiary instead of a proxy when possible was strongly favored because sample members generally provide more complete and more accurate information than proxy respondents. However, allowing the use of proxies when necessary minimized the risk of nonresponse bias that would have resulted from the exclusion of individuals with severe physical or cognitive impairments.

In the NBS, we used an innovative “mini-cognitive test” designed expressly for the survey to identify when proxy respondents were needed.<sup>13</sup> The screener provided interviewers with a tool for evaluating when to seek a proxy rather than leave the decision to their discretion or to

---

<sup>13</sup> Westat designed the test as part of the design of the Ticket to Work evaluation; MPR modified it after pretesting.

gatekeeper advice. The test combined the ability to understand the survey topics with elements of informed consent.

Specifically, we asked three questions at the start of the interview. First, we gave a general description of the survey topics to be covered (your health, daily activities, and any jobs you might have) and asked the respondent to state the topics in his or her own words. Second, we described the voluntary nature of the survey and asked respondents to state, in their own words, what that description meant to them. Third, we described the confidential nature of the respondents' answers and asked them to state what that description meant. If respondents were unable to restate accurately any description after two attempts, we asked if someone else could answer questions on their behalf.

For cases in which a sample person or knowledgeable informant expressed that a proxy would be necessary, several guidelines were used to determine whether a proxy would be appropriate. These guidelines included using proxies only when the sample member's physical or mental condition precluded self-response, selecting the most knowledgeable proxy, and ensuring that the proxy answered on behalf of the sampled respondent rather than offering his or her own opinions. Interviewers were trained to overcome gatekeepers' objections, and to give sample members the opportunity to speak for themselves whenever possible.

At round 1, proxy interviews were completed for 1,997 sample persons (26 percent of all completes). In most cases (approximately 77 percent), a proxy was necessary because the sample person failed the cognitive assessment or was otherwise determined to be unable to respond due to a cognitive or mental impairment. Interviews were completed by proxy for 1,901 sample persons in the Representative Beneficiary Sample (29 percent of completes) and 96 sample persons in the Ticket Participant Sample (9 percent of completes).

### **C. CASE DISPOSITION SUMMARY**

A total of 6,520 cases from the Representative Beneficiary Sample and a total of 1,083 cases from the Ticket Participant Sample were completed. An additional 458 sample persons in the Representative Beneficiary Sample and an additional 73 sample persons in the Ticket Participant Sample were determined to be ineligible to participate in the survey. These cases included sample persons who were deceased, no longer living in the continental United States, who were incarcerated or institutionalized, or who were denied benefits since the time of sample selection or who had never received SSA benefits. Table IV.1 provides a summary of final case disposition for all released cases in the sample by sampling strata.

TABLE IV.1

## SUMMARY CASE DISPOSITION BY SAMPLE TYPE AND SAMPLING STRATA

	Complete				Ineligible				Refused			Unlocated		Non-Respondents

Note: The number of completed cases includes 23 partial completes: 4 in the participant sample and 19 in the beneficiary sample.

<sup>a</sup>Most of the 50 participants enumerated in this cell were classified as ineligible for purposes of sampling weight computation.

## V. VARIABLE CONSTRUCTION AND EDITING

The NBS data files contain several types of variables: unedited and edited questionnaire variables, imputed variables and imputation flags, coded verbatim responses, variables masked for the Public Use File, constructed variables derived from questionnaire variables, weights, survey administration variables, and SSA administrative data.<sup>14</sup> This chapter provides an overview of the types of variables on the file and variable naming conventions as well as additional details on coded items and select constructed variables.

### A. EDITING OF QUESTIONNAIRE VARIABLES

Questionnaire variables are survey items collected directly from the respondent. On the NBS data files, these variables are distinguished by a two-part name with the first part of the variable name representing the section of the questionnaire where the question originates and the second part of the variable name representing the numerical question from the questionnaire (for example, question F11 comes from section F of the questionnaire and is question 11).

The NBS data were thoroughly reviewed for discrepancies that might have resulted from programming or interviewer errors. Editing was performed to resolve any inconsistencies in skip patterns. Editing also included a review and resolution of outlier values by recoding either to an appropriate valid value or to a value of missing (.D=don't know). For key variables, these responses were imputed along with other missing values. In consultation with SSA and research analysts, we took the general approach of editing only those cases where there appeared to be an obvious data entry or respondent error. As a result, while a substantial amount of time was spent meticulously reviewing individual responses, some suspect values remain on the file. For more

---

<sup>14</sup> In general, unedited variables are those which contain the original response to a single questionnaire item.

information on data problems and the completeness of the survey data set, see the National “Beneficiary Survey: Round 1 Data Cleaning and Identification of Data Problems Report” (Wright and Barrett 2008).

## **B. IMPUTATION OF MISSING VALUES**

A case may be missing data for a particular item because the item was logically skipped (the respondent was not eligible to receive the item), the respondent refused the item or gave a “don’t know” response, there was an interviewer or programming error that resulted in a loss of data, or the case was a partial complete and is missing data for some items in the survey. Data for cases completed up through H61 (or G61 if the respondent was not eligible for section H) were included on the file as partial completes. All subsequent items for these cases were coded as .P. Table V.1 provides a summary of missing value codes and their description. For NBS, missing data due to don’t know or refused responses and those missing because the case was partially completed (.D, .R, and .P) were imputed for selected variables on the file.

TABLE V.1  
MISSING VALUES AND DESCRIPTION

Value	Description
L	Logical skip: respondent not eligible to receive the item
D	Don’t know: respondent did not know how to answer the item
R	Refused: respondent refused to provide a response to the item
M	Missing data: data are missing due to interviewer or programming error
P	Partial complete: data are missing due to partial interview

Source: NBS, round 1.

Variables were selected for imputation based on their level of missing data and their analytic importance. Variables imputed included those related to race and ethnicity, disability status,

current employment, health, income, and personal and household characteristics. A complete list of variables selected for imputation and the specific imputation procedures employed for each item can be found in Chapter VII. Imputed variables share the same name as the original variable but end in an “\_i”. The original non-imputed variables are retained on the Restricted Access File. Imputation flags are also included on the Restricted Use File and indicate that a case has been imputed and describes the method of imputation (see Table V.2). Imputation flag variables share the same name as the original variable and end in “\_iflag” (for example, “BMI\_cat\_i” is the imputed version of the constructed variable C\_BMI. BMI\_cat\_iflag indicates which cases were imputed and the method used for that imputation).

TABLE V.2  
IMPUTATION FLAG VALUES AND DESCRIPTION

Imputation Flag Value	Description
0	No Change
1	Logical Imputation
2	Administrative Data
3	Hotdeck Imputation
4	Imputed by Distributional Assumptions
5	Imputed by Descriptive Statistic
6	Constructed from Imputed variables
L	Logical Skip
P	Partial

### C. CODING OF VERBATIM RESPONSES

The NBS questionnaire includes a number of questions designed to elicit open-ended responses. To make it easier to use the data connected with these responses in an analysis, we grouped the responses and assigned them numeric codes when possible. The methodology used

to code each variable depended upon the content of the variable. Three kinds of questions (described below) on the NBS did not have designated response categories; rather, the response to these questions was recorded verbatim:

- ***Open-ended questions*** have no response options specified (such as E43—Why are you no longer receiving services from your employment network?). For these items, interviewers recorded the verbatim response. Using common responses, we developed categories and reviewed them with analysts. Coders then attempted to code the verbatim response into an established category. If the response did not fit into one of those categories, it was coded as “other.”
- ***“Other/specify”*** is a response option for questions that have a finite number of possible answers that may not necessarily capture *all* possible responses. A good example is: “Did you do anything else to look for work in the last four weeks that I didn’t mention?” For questions of this type, respondents are asked to specify an answer to the question “anything else?” or “anyone else?”
- ***Field-coded Responses*** are answers coded by interviewers into a predefined response category without reading the categories aloud to the respondent. If none of the response options seem to apply, interviewers select an “other specify” category and type in the response.

As part of data processing, we examined a portion of all verbatim responses in an attempt to uncover dominant themes for each question. Based on this initial review, we developed a list of categories and decision rules for coding verbatim responses to open-ended items. In addition, supplemental response categories were added to some field-coded or other/specify items to facilitate coding if there were enough such responses and they could not be back-coded into pre-existing categories. (A list of all open-ended items assigned additional categories during the coding process appears in Appendix B.) Thus we categorized verbatim responses for quantitative analyses by coding responses that clustered together (for open-ended and “other/specify” responses) or by back-coding responses into existing response options if appropriate (for “field-coded” and “other/specify” items). If during coding, it became apparent that changes to the coding scheme were necessary (for example adding additional categories or clarifying coding decisions), new decision rules were discussed and documented. Verbatim responses were sorted

alphabetically by item for coders and could be filtered by coding status so that new decision rules could be easily applied to cases that had been previously coded. When it was impossible to code a response, when responses were invalid, or when they could not be coded into a given category, we assigned a two-digit supplemental code to the response (see Table V.3). The verbatim responses themselves are excluded from the data files. (See Barrett and Wright (2008) for full details regarding the back-coding procedures.)

TABLE V.3  
SUPPLEMENTAL CODES FOR OTHER, SPECIFY CODING

Code	Label	Description
94	Invalid Response	Indicates that the response should be deleted.
95	Refused	The verbatim indicates the respondent refused to answer the question.
96	Duplicate Response	The verbatim response has already been selected in a ‘code all that apply’ item.
98	Don’t Know	The verbatim indicates the respondent did not know the answer.
99	Not Codeable	Indicates that a code cannot be assigned based on the verbatim response.

Source: NBS, round 1

Two special cases of verbatim response coding are discussed in more detail below: health condition, and industry and occupation coding.

### **1. Health Condition Coding**

Responses to questions on health conditions required a specific type of open-ended coding. In Section B of the questionnaire, each respondent was asked to cite the main and secondary physical or mental conditions that limit the kind or amount of work or daily activities they can do. Main conditions could be reported at one of four items: B2 (main reason limited), B6 (main reason eligible for benefits), B12 (main reason was eligible for benefits if not currently eligible), and B15 (main reason limited when first started getting disability benefits). The majority of respondents (92 percent) reported a main limiting condition at B1 and B2. The main purpose of

items B6, B12, and B15 was to collect information on a health condition from people who reported no limiting conditions in B2. For example, if respondents said that they had no limiting conditions, they were asked if they were currently receiving benefits from Social Security. If they answered “yes,” they were asked for the main reason that made them eligible for benefits (B6). If respondents said that they were not currently receiving benefits, they were asked whether they had received disability benefits in the last five years. If they answered “yes,” they were asked for the condition that made them eligible for Social Security benefits (B12) or for the reason that first made them eligible if they no longer had that condition (B15). If respondents said that they had not received disability benefits in the last five years, they were screened out of the survey and coded as ineligible. Each response to B2, B6, B12, and B15 was assigned a value for the three constructs. Although respondents were asked to cite one “main” condition in B2, B6, B12, or B15, many listed more than one. These additional responses were maintained under the main condition variable and coded in the order in which they were recorded.

For each item on a main condition, respondents were also asked to list any other, or secondary, conditions. For example, respondents reporting a main condition at B2 were asked at B4 to list other conditions that limited the kind or amount of work or daily activities they could do. Respondents reporting the main reason they were eligible for disability benefits (at B6) were asked at B8 to list other conditions that made them eligible. Finally, respondents who reported that they were not currently receiving benefits and who reported a main condition at B12 (the condition that made them eligible to receive disability benefits in the last five years) were asked at B14 for other reasons that made them eligible for benefits. Those who reported that their current main condition was not the condition that made them eligible for benefits and who were asked for the main reason they were first limited were also asked if there were any other conditions that limited them when they first started receiving benefits (B17).

Respondents' verbatim responses were coded according to the International Classification of Diseases, 9th revision, Clinical Modification (ICD-9-CM) five-digit coding scheme. The ICD-9 is a classification of morbidity and mortality information that was developed in 1950 to index hospital records by disease for data storage and retrieval. The ICD-9 was available in hard copy for each of the coders. Coders, many of whom had previous medical coding experience, attended an eight-hour training session before coding and were instructed to code to the highest level of specificity possible. Responses that were not specific enough for a five-digit code were coded to four (subcategory) or three digits (category codes). Responses that were not specific enough for even three- or four-digit ICD-9 codes were coded either as a physical problem (not specified) or to broader categories representing disease groups. (See Table V.4 for a list of the broad categorical and supplementary codes.) In cases in which multiple, distinct conditions were provided by the respondent, all conditions were coded (for instance, three distinct conditions would be recorded and coded as B2\_1, B2\_2, and B2\_3).

We ensured that responses were coded according to the proper protocols in several ways. First, we did an initial quality assurance check, per coder, for the first several cases that were coded. An additional 10 percent of all coded responses were reviewed by a supervisor, including cases coders flagged for review that they were unable to code or did not know how to code. Approximately 8 percent of all cases were recoded. In the course of this work, additional decision rules were developed to clarify and document coding protocol. These decisions were discussed with coders and posted to ensure that responses were coded consistently and accurately throughout the coding process. As for other open-ended items, when new decision rules were added, previously coded responses were reviewed and re-coded if necessary.

TABLE V.4

BODY SYSTEM DIAGNOSIS GROUPS  
(C\_MAINCONBODYGROUP\_1-9, C\_SECCONBODYGROUP\_1-9, C\_REASBECELIGBODYGROUP)

Code	Label	Description of ICD-9 codes	Corresponding ICD-9 codes
00	Other	Other and unspecified infectious and parasitic disease; alcohol dependence syndrome and drug dependence; learning disorders and developmental speech or language disorders; complications of medical care, not elsewhere classified	136.0-136.9, 303.00-304.90, 315.00-315.39, 999.0-999.9
01	Infectious and parasitic diseases	Borne by a bacterium or parasite and viruses that can be passed from one human to another or from an animal/insect to a human including tuberculosis, HIV, other viral diseases, and venereal diseases (excluding other and unspecified infectious and parasitic diseases)	001.0-135, 137.0-139.8
02	Neoplasms	New abnormal growth of tissue, i.e., tumors and cancer, including malignant neoplasms, carcinoma in situ, and neoplasm of uncertain behavior	140.0-239.9
03	Endocrine/nutritional disorders	Thyroid disorders, diabetes, abnormal growth disorders, nutritional disorders, and other metabolic and immunity disorders	240.0-279.9
04	Blood/blood-forming	Diseases of blood cells and spleen	280.0-289.9
05	Mental disorders	Psychoses, neurotic and personality disorders, and other non-psychotic mental disorders including mental retardation (excluding alcohol and drug dependence and learning, developmental, speech, or language disorders)	290.0-302.9, 305.00-314.9, 315.4-319
06	Diseases of nervous system	Disorders of brain, spinal cord, central nervous system, peripheral nervous system, and senses including paralytic syndromes, and disorders of eye and ear	320.0-389.9
07	Diseases of circulatory system	Heart disease, disorders of circulation, and diseases of arteries, veins, and capillaries	390-459.9
08	Diseases of respiratory system	Disorders of the nasal, sinus, upper respiratory tract, and lungs including chronic obstructive pulmonary disease	460-519.9
09	Diseases of digestive system	Diseases of the oral cavity, stomach, esophagus, and duodenum	520.0-579.9
10	Diseases of genitourinary system	Diseases of the kidneys, urinary system, genital organs, and breasts	580.0-629.9
11	Complications of pregnancy, child birth, and the puerperium	Complications related to pregnancy or delivery, and complications of the puerperium	630-677

TABLE V.4 (continued)

Code	Label	Description of ICD-9 codes	Corresponding ICD-9 codes
12	Diseases of skin/ subcutaneous tissue	Infections of the skin, inflammatory conditions, and other skin diseases	680.0-709.9
13	Diseases of musculoskeletal system	Muscle, bone, and joint problems including arthropathies, dorsopathies, rheumatism, osteopathies, and acquired musculoskeletal deformities	710.0-739.9
14	Congenital anomalies	Problems arising from abnormal fetal development, including birth defects and genetic abnormalities	740.0-759.9
15	Conditions in the perinatal period	Conditions that have origin in birth period even if disorder emerges later	760.0-779.9
16	Symptoms, signs, and ill-defined conditions	Ill-defined conditions and symptoms; used when no more specific diagnosis can be made	780.01-799.9
17	Injury and poisoning	Problems that result from accidents and injuries including fractures, brain injury, and burns (excluding complications of medical care not elsewhere classified)	800.00–998.9
18	Physical problem, NEC	The condition is physical, but no more specific code can be assigned.	No ICD-9 codes
95	Refused	Verbatim indicates respondent refused to answer the question.	No ICD-9 codes
96	Duplicate condition reported	The condition has already been coded for the respondent.	No ICD-9 codes
97	No condition reported	The verbatim does not contain or symptom to condition to code.	No ICD-9 codes
98	Don't know	The respondent reports that he/she does not know the condition.	No ICD-9 codes
99	Uncodeable	A code cannot be assigned based on the verbatim response.	No ICD-9 codes

Source: NBS, round 1.

After the ICD-9 coding was complete, we processed the health condition variables into a series of constructed variables that grouped health conditions into broad disease groups. In addition to the body system classifications represented in Table V.4 (C\_MAINCONBODYGROUP\_1-9, C\_SECCONBODYGROUP\_1-9), primary diagnosis groups were formed that provide separate categories for HIV/AIDS, schizophrenia, major affective disorders, mental retardation, visual impairments, hearing impairments, and speech disorders (C\_MAINCONDIAGGRP\_1-9,

C\_SECCONDIAGGRP\_1-9; see Table V.5 for codes). Additional constructs collapse these categories into four broad groups and are provided on the Public Use File (C\_MAINCONCOLDIAGGRP\_1-9, C\_SECCONCOLDIAGGRP\_1-9; see Table V.6 for codes). A set of separate constructs was also created to summarize responses provided at B6, B12, and B15 (C\_REASBECELIGICD9, C\_REASBECELIGDIAGGRP, C\_REASBECELIGCOLDIAGGRP, and C\_REASBECELIGBODYGROUP). These constructs clarify the eligibility of sample members who indicate at B1 and B2 that they do not have a disabling condition.

TABLE V.5

PRIMARY DIAGNOSIS GROUPS  
(C\_MAINCONDIAGGRP\_1-9, C\_SECCONDIAGGRP\_1-9, C\_REASBECELIGDIAGGRP)

Code	Label	Description of ICD-9 Codes	Corresponding ICD-9 and Two-digit Codes
00	Other	Other and unspecified infectious and parasitic disease; alcohol dependence syndrome and drug dependence; learning disorders and developmental speech or language disorders; complications of pregnancy, childbirth and the puerperium; conditions in the perinatal period; symptoms, signs and ill-defined conditions; complications of medical care, not elsewhere classified; physical problems not elsewhere classified.	136.0-136.9, 303.00-304.93, 315.00-315.39, 630-677, 760.0-779.9, 780.01-784.2, 784.60-799.99, 999.0-999.9, 11,15, 16, 18
01	Infectious and parasitic Diseases	Borne by a bacterium or parasite and viruses that can be passed from one human to another or from an animal/insect to a human, including tuberculosis, other viral diseases, and venereal diseases (excluding HIV and other and unspecified infectious and parasitic diseases)	001.0-041.9, 045.00-135, 137.0-139.8, 01
02	HIV/AIDS	HIV infection	042
03	Neoplasms	New abnormal growth of tissue, i.e., tumors and cancer, including malignant neoplasms, carcinoma in situ, and neoplasm of uncertain behavior	140.0-239.9, 02
04	Endocrine/nutritional Disorders	Thyroid disorders, diabetes, abnormal growth disorders, nutritional disorders, and other metabolic and immunity disorders	240.0-279.9, 03

97	No condition reported	The verbatim does not contain symptom or condition to code.	No ICD-9 codes
98	Don't know	The respondent reports that he/she does not know the condition.	No ICD-9 codes
99	Uncodeable	A code cannot be assigned based on the verbatim response.	No ICD-9 codes

Source: NBS, round 1.

## 2. Industry and Occupation

Information about the sample member's current employment and employment in 2003 was collected in section C and section D of the questionnaire. For each job, respondents were asked to list their occupation (C2 and D4) and the type of business or industry (C3 and D5) where they were employed. Verbatim responses to the occupation items were coded using the Bureau of Labor Statistics' 2000 Standard Occupational Classification (SOC).<sup>15</sup> The SOC is a system for classifying all occupations in the economy, including private, public and military occupations in which work is performed for pay or profit. Occupations are classified based upon work performed, skills, education, training, and credentials. The sample member's occupation was assigned one occupation code. The first two digits of the SOC codes classify the occupation to a major group and the third digit to a minor group. For NBS, we assigned three-digit SOC codes to describe the major group the occupation belonged to and the minor groups within that classification (using the 23 major groups and 96 minor). See Appendix C for a list of the three-digit minor groups classified by major groups.

Verbatim responses to the industry items were coded using the 2002 North American Industry Classification System (NAICS).<sup>16</sup> The NAICS is an industry classification system that groups establishments into industrial categories based on the activities in which those establishments are primarily engaged. The NAICS uses a hierarchical coding system to classify all economic activity into 20 industry sectors. For the NBS, we coded NAICS industries to three digits: the first two numbers specify industry sector and the third number specifies the sub-

---

<sup>15</sup> See Standard Occupational Classification Manual, 2000 or <http://www.bls.gov/soc/> for more information.

<sup>16</sup> See North American Industry Classification System, 2002 or <http://www.naics.com/info.htm> for more information.

sector. See Appendix D for a list of the industries and codes. Both the SOC and NAICS coding schemes are used in most federal surveys and provide uniformity and comparability across data sources.

MPR developed supplemental codes for responses to questions about occupation and industry that were not codeable to a three-digit SOC or NAICS code. Table V.7 lists the occupation and industry supplemental codes.

TABLE V.7  
SUPPLEMENTAL CODES FOR OCCUPATION AND INDUSTRY CODING

Code	Label	Description
94	Sheltered workshop	Code used if occupation is part of sheltered workshop
95	Refused	The respondent refuses to give his/her occupation or type of business.
97	No occupation or industry reported	No valid occupation or industry is reported in the verbatim.
98	Don't know	The respondent reports that he/she does not know the occupation or industry.
99	Uncodeable	A code cannot be assigned based on the verbatim response.

Source: NBS, round 1.

As with health condition coding, we performed an initial quality assurance check for the first several cases that were coded per coder. An additional 10 percent of all coded responses were reviewed by a supervisor, including cases coders flagged for review that they were unable to code or did not know how to code. Approximately 4 percent of all cases were recoded.

The verbatim responses provided at C2 and C3 are not included on the data file. The coded responses to C2 for each job listed are found in the constructed variables C\_MainCurJobSOC, C\_CurJob2SOC- C\_CurJob4SOC. The coded responses to C4 are found in C\_MainCurJobNAICS, C\_CurJob2NAICS- C\_CurJob4NAICS.

## **D. CONSTRUCTED VARIABLES**

The NBS data file preparation included creating more than 300 constructed variables in order to simplify the data file and assist the user. Constructed variables are created by combining information from two or more other sources of data to create one variable. The algorithms and specifications used to create the constructed variables are included in the data file codebooks.

Constructed variables are positioned to appear at the end of the section of variables from which they were created. All constructed variables begin with “C\_” succeeded by a brief description of what the variable measures (for example, “C\_TotCurWkHours” measures the total weekly hours the respondent worked at all of the jobs he/she listed).

For the NBS, the constructed variables fall in to several categories, which are briefly described below. A list of constructed variable names and their description can be found in Appendix E.

### **1. Survey Administration**

The first type of constructed variable includes survey administration and respondent descriptor variables. Included in this set of constructed variables are C\_Rtype (indicating whether the interview was completed by the sample member or a proxy respondent), C\_IntMode (CAPI or CATI interview), C\_Resptype (indicating whether the interview was completed by the sample member only, the sample member with help, or a proxy only), and C\_Intage (age at interview). In some cases, constructs were based on sampling variables for example, C\_PaymentType (EN payment type), and C\_Cohort (sampling cohort). These constructs are positioned at the beginning of the file, prior to the questionnaire sections.

## **2. Logical Zero**

To reduce the number of legitimate missing responses originating from survey skip patterns, “logical zero” constructs were created for variables assessing the amount of income the sample member received from a variety of sources in the month prior to interview (based on K3, K7a-K7h, K12, and K15). These constructs included the amount earned from jobs last month (C\_LstMnthPay), the amount received from private disability insurance (C\_AmtPrivDis), worker’s compensation (C\_AmtWorkComp), veteran’s benefits (C\_AmtVetBen), public assistance (C\_AmtPubAssis), unemployment (C\_AmtUnemploy), private pension (C\_AmtPrivPen), food stamps (C\_AmtFoodStamp), other government programs (C\_AmtOthGov), other sources on a regular basis (C\_AmtOthReg), and from other sources on a nonregular basis (C\_AmtOthNonReg). For example, if the respondent reported he or she did not receive private disability insurance last month (question K6a), the follow-up question asking how much private disability insurance was received (question K7a) was skipped. During data processing, such .L (logical skip) responses were recoded to \$0. Thus, if the sample member reported not receiving private disability insurance the previous month, then the value of C\_AmtPrivDis was “\$0.” Logical zero constructed variables are identified in the codebook user notes.

## **3. Duration and Amount Standardization**

Throughout the NBS questionnaire, respondents had the option of reporting contacts with providers, income, and expenditures in the unit of their choosing, for instance, daily, weekly, or monthly. The NBS questionnaire was designed with the expectation that allowing respondents to select the time frame (ideally, the time frame with which they were most comfortable) would improve data quality. In these situations, the amount and the unit reported by the respondent existed as two distinct variables in the survey data. For example, question C12amt asked for the

amount paid on a job and C12hop, how often the amount was paid. To aid the user, constructed variables were created to standardize the time frame, resulting in a single variable (for example, C\_MainJobHrPay) in one unit. In section C and D both hourly pay (C\_MainCurJobHrPay, C\_MainJobHrPay2003) and monthly pay variables were created (C\_MainCurJobMnthPay, C\_MainCurJobMnthPayTH, C\_MainJobMnthPay2003, C\_MainJobMnthPayTH2003). Time to report one's current job to SSA was standardized to a week unit (C\_MainCurJobRepSSA). Household income, as reported at L23Aamt and L23Ahop was standardized to an annual unit (C\_HhInc2003). Variables in section G referencing cost of services (C\_ServCost2003, C\_TotSerCost2003), costs of equipment and personal assistance services (C\_CurMnthEquipExp, C\_CurMnthPASExp, and C\_TotCurEquipPASExp), duration of visits with provider (C\_DurProvVisit), number of contacts with provider (C\_NumProvCont), and total money received from ENs (C\_TotMoneyENS2003) were also created to standardize reporting units. The NBS codebook provides the specifications used to create these variables in the construct specification notes for each variable.

#### **4. Pathing Combinations**

Other constructs were created to combine or summarize survey responses when answers could be provided in multiple places. For example, respondents could report current Medicare coverage in J1 when explicitly probed for this type of insurance and also at J9 ("What kinds of health insurance coverage do you have?") if they reported having no current insurance at J1-J5. In this case, a construct was created that checked both J1 and J9 to determine if the respondent indicated Medicare coverage at either item (C\_CurMedicare). This type of construct was created for all health insurance variables in section J. Similar constructs were created to flag awareness of the Ticket to Work program (C\_AwareTTW), as well as age the sample member first became limited (C\_DisAge and C\_AdultChildOnset), ever worked for pay (C\_EvrWorked), and worked

when limited (C\_WrkdWhenLim). Similarly because G46 (family paid for services) was skipped if family was indicated as a source of payment in G45 (who paid for services from provider), constructs were created to identify sources of payments across these items (C\_SelfFamPayServ-C\_C\_AgencyPayServ). The constructed variable code included in the codebooks provides the original questionnaire variables used to create each constructed variable.

Finally, several constructed variables were created in section G to summarize information across providers. In order to facilitate reporting of services received, respondents were asked to list the names of places where they received various types of services (employment, job training, medical services, mental health services, and schooling). For each provider mentioned, respondents were then asked whether they received services from this provider in 2003. To consolidate this information, constructs were created to flag whether each particular type of services was ever received (C\_EvrUseEmploy, C\_EvrUsedServ) and which specific services were received in 2003 across providers (C\_PhyTh2003-C\_JobCch2003). Additionally constructs were created to flag whether services were ever received from particular types of providers (for example, C\_EvrUseSVR) and whether those providers were used in 2003 (for example, C\_UseSVR2003). The provider constructs created in section G are discussed in more detail below.

## **5. Scales**

Constructed variables were also created to summarize items that were part of a pre-existing scale. This included creating a total SF-8<sup>TM</sup> physical and mental score (C\_PCS8TOT, C\_MCS8TOT), a score on the CAGE alcohol scale (C\_CAGEAlcohol), and a drug dependence indicator (C\_DrugDep). A body mass index (C\_BMI) construct was also created based on height and weight.

## **6. Other**

Additional constructs were created to simplify analysis of income data (by creating a poverty level construct), impairments (by creating a series of variables to identify the number of ADL, IADL, physical, emotional, and other impairment types), job information (by collapsing information across jobs), and information about Employment Networks and length of time in the TTW program (by summarizing across Employment Networks).

## **E. SSA ADMINISTRATIVE DATA**

MPR received administrative data from SSA for the purposes of selecting the sample; contacting, locating, and verifying sample members; and to fill information or drive instrument pathing in the survey instrument. Personally identifying information received from SSA (for example, Social Security number, name, address, and telephone number) is not included on either the Restricted Use or Public Use data file. Key items that were used for the creation of sampling strata and those that were used to dictate pathing in the instrument are included. These variables begin with “OrgSampInfo” to indicate that they are original sample file variables.

Because SSA benefit amount received last month was not asked of respondents, this information was retrieved from SSA administrative variables and was incorporated into the monthly income variables, C\_AmtOthReg and C\_TotGovCashBen. Additionally, back payments received from SSA were included as other income received on a non-regular basis for the variable C\_AmtOthNonReg.

Additional administrative variables from SSA records were appended to the round 1 file to enable more comprehensive data analysis. These data retain their original names and are included at the end of the file. Only a subset of the SSA administrative data included on the full file are available as part of the Public Use File.

## **F. PUBLIC USE VARIABLES**

Some data were edited to ensure the confidentiality of survey respondents for the Public Use File. Editing for the Public Use File involved excluding variables containing information that could potentially be used to directly or indirectly identify a sample member, and constructing new variables to mask extreme or rare values and populations. Using SSA's Office of Program Development and Research's (OPDR) Disclosure Checklist for the Public Release of Data, we developed encryption/masking algorithms that would maximize the analytic value of the data while maintaining acceptable confidentiality for the program participants. This file has been approved for release by the OPDR Disclosure Review Board.

### **1. Variable Exclusion**

In order to minimize the likelihood of indirect identification of a sample member, variables that could identify residents of smaller geographic areas or sample members possessing rare attributes (outliers) were deleted. Particular attention was paid to variables showing fewer than 100 sample members with a given characteristic (small cell sizes). The file was also simplified by dropping variables with little analytic value. These included survey administration variables, source variables that had corresponding imputed versions, imputation flags, source variables that were summarized in a constructed variable, and constructed variables that had not yet been utilized in round 1 analyses. Data elements with quality problems that would reduce their analytic value were also dropped. SSA administrative data appended to the Restricted Access File were also dropped. In their place, select key administrative variables were masked and added to the file as new constructs. Appendix F provides a list of all variables dropped or replaced and the reason the variable was excluded. See Appendix A for a list of all variables included and dropped from the Public Use File.

## **2. Masking and the Construction of New Variables**

The remaining variables were assessed for their confidentiality disclosure risk. When survey questions identified relatively rare populations, a new variable was constructed to combine small groups into larger groupings. For many variables that posed a potential risk, constructed variables summarizing the information already existed on the file. When constructed variables did not exist, MPR prepared masking algorithms that maximized their analytic value while maintaining acceptable confidentiality for the program participants. Masking algorithms included top and bottom-coding of continuous variables, collapsing continuous variables into categories, and combining responses for categorical variables. These Public Use File constructs were assigned the same variable name as the source variable and end with a “PUB” to indicate that they were created for the Public Use File. These variables are also included on the Restricted Use File. A complete list of all variables edited for confidentiality with a brief description of the recode, can be found in Appendix G. Descriptions of the specific recodes and construct specifications for each variable can also be found in the codebook.

## **G. ADDITIONAL DETAILS ON SELECTED CONSTRUCTED VARIABLES**

### **1. Jobs Held in 2003**

In section C (Current Employment), job-related information was collected for each job held at the time of interview. In section D (Jobs/Other Jobs in 2003), information was collected for any other jobs held in 2003 not already reported in section C. Data for each job are represented on the Restricted Use data file with an `_n` indicating which job the data are in reference to (for example, `D6mth_1` indicating month started first job, `D4mth_2` indicating month started second job, and so on). In both sections, respondents were asked to report first on their main job, that is, the job at which they worked the most hours, and then to subsequently report on other jobs held. To reduce respondent burden, respondents were not asked to report on any jobs held during 2003

that had previously been mentioned in section C as current employment. Rather, employment data from section C were copied to section D items during data processing for all current jobs also held during the 2003 time period. See Table V.8 for a list of all job specific items that were filled in with section C data. Items in section D that had no equivalent in section C (D8mtn, D8yr, D23) were coded as .L (indicating logical skip).

TABLE V.8  
JOB VARIABLES IN SECTIONS C AND D

Variable in C	Variable in D	Variable Description
C2	D4	Occupation
C3	D5	Industry
C4mth, C4yr	D6mth, D6yr	Start month and year of job
No equivalent item	D8mth, D8yr	Stop month and year of job
C6	D14	Self-employed status
C7	D15	Sheltered workshop status
C8	D16	Hours usually worked per week
C9	D17	Weeks usually worked per year
C10	D18	Paid by the hour
C11	D19	Hourly pay
C12amt, C12hop	D20amt, D20hop,	Amount of pre-tax pay
C13amt, C13hop	D21amt, D21hop	Amount of post-tax pay
No equivalent item	D23_1 thru D23_22	Reasons for stopping work

Source: NBS, round 1.

**a. Including Current Jobs Held in 2003 in Section D**

Jobs mentioned in section C were defined as held in 2003 if C4yr (year started current job) was earlier than or equal to 2003 and the job held in 2003 had been held for longer than one month. Each applicable job from section C was copied into the first blank job slot in section D (for example into D6mth\_2 if D6mth\_1 already contained data and into D6mth\_3 if both D6mth\_1 and D6mth\_2 already contained data). The variables C\_job\_from\_SecC\_1 through C\_job\_from\_SecC\_4 are included on the Restricted Access data file to indicate which jobs from section C (by job number) were copied into specific section D job slots.

**b. Determining the Main Job Held in 2003**

In addition to copying job data from section C to the section D items, it was necessary to determine which job held in 2003 was the main job. Prior to including the jobs from section C, the main job held in 2003 was stored as job 1. Since it was possible that a job reported in section C was the respondent's main job in 2003, hours worked in 2003 on each job were compared with the first job mentioned in section D once the jobs from section C were incorporated. The job with the greatest number of hours per year (numbers of hours per week multiplied by the number of weeks per year), was considered the main 2003 job.<sup>17</sup> The variable Main\_Job\_grid\_num identifies the job number of the main job held in 2003 after this analysis.

---

<sup>17</sup> If hours per year could not be calculated due to missing data on either number of hours per week or number of weeks per year, it was coded as missing. If hours per year was missing for all 2003 section C jobs, job 1 in section D was counted as the main job in 2003. If there were no jobs listed in section D, and hours per year was missing for all 2003 jobs in section C, the first job listed in C that was a 2003 job was counted as the main job in 2003. If hours per year was missing for job 1 in section D, the section C job with most hours per year was counted as the main 2003 job.

If there was no 2003 job from section C, or hours per year was missing for all section C 2003 jobs, job 1 in section D was counted as the main 2003 Job. If hours per year was missing for all 2003 section C jobs and job 1 in section D, job 1 in section D was counted as the main job in 2003.

This was used to create a series of variables ending with `_m` representing each job specific item listed in Table III.5 for the main job held in 2003 (for example `D6mth_m` and `D6yr_m`). It is important to note that information related to the main job was not deleted from the `job_1-job_5` variables when this was done. For example, for a case in which three jobs are listed in section D (after copying relevant jobs from section C) and the second job is determined to be the main job, information related to hours worked on this job will be found in both `C8_m` and in `C_8_2`. Therefore, `_m` jobs should not be counted as additional jobs. On the public use version of the file, only the main job variables (`_m`) are provided for jobs held in 2003.

For the purposes of the constructed variables created in this section, separate constructs were created for each job mentioned (job 1, job 2, and so on). Additional constructs were created for the “main” job (`C_MainJob2003SOC`, `C_MainJob2003NAICS`, `C_MainJobHrPay2003`, `C_MainJobMnthPay2003`, `C_MainJobMnthPayTH2003`, and `C_MnthsMain2003Job`) as identified by the variable `Main_Job_grid_num`. As stated above, information in the main job constructs is replicated in one of the other job slots on the restricted file and does not represent an additional job.

## **2. Service Providers**

In section G, respondents were asked to discuss employment-related services and supports they received in 2003. To aid in the recall of employment-related services received in 2003, respondents were first asked if they had ever received employment services, job training, medical services, or counseling to improve their ability to work or live independently. For each type of service, respondents were asked to list up to eight providers or places where the service was received (at G2, G11, G16, and G20). Provider type was then collected for each provider mentioned. To minimize respondent burden by avoiding the need to ask provider type again if a provider was listed under two or more services, interviewers could indicate that a provider had

already been mentioned, thus skipping the provider type follow-up questions. Once a list of providers ever used was obtained, respondents were asked when they last received services from each provider. Follow-up questions regarding specific services received, number of visits, duration of visits, cost of services, and usefulness of services received in 2003 were asked for each provider from whom services were received in 2003.

Data for each specific provider mentioned were stored in a grid using the convention `_n` (1-34) to indicate which provider the data were associated with. Providers mentioned under G2 (employment services received) were stored in slots `_1-_10`; providers mentioned under G11 (job training) were stored in slots `_11-_18`; providers mentioned under G16 (medical services) were stored in slots `_19-_26`; and providers mentioned under G20 (therapy or counseling) were stored in slots `_27-_34`. This convention was maintained throughout the section so that data associated with the second provider listed under G2 (`_2`) are always found in the `_2` variables (for example `G33_2`) and data associated with the second provider listed under G11 (`_12`) are found in the `12` variables (for example `G33_12`).

To simplify this section for the purposes of analyses, a series of constructed variables were created. To start, each provider was assigned a provider type code (`C_ProvType2005_1-_34`) indicating the type of provider services were received from (see the NBS codebook for detailed construct specifications). Constructs were also created to identify services received from each provider (for example `C_PhyTh2005_1-_34`, `C_OccTh2005_1-_34`, and so on), the duration of the visit with each provider (`C_DurProvVisit_1- C_DurProvVisit_34`), the number of contacts with each provider (`C_NumProvCont_1- C_NumProvCont_34`), and the usefulness of services received from each provider (`C_ProvUse2005_1- C_ProvUse2005_34`). Variables were then created to classify providers by type so that a list of providers and services received by provider type could be developed. For example, if the first provider mentioned was a state vocational

rehabilitation agency (SVRA), this provider was considered the first SVRA provider (C\_Provtype2003\_01\_1) with \_01 indicating provider type 1 (SVRA) and \_1 indicating first provider of this type mentioned. If the second provider was a mental health provider, this provider was considered the first mental health provider (C\_Provtype2003\_03\_1). If the third provider was another SVRA, this provider was considered to be the second SVRA provider (C\_Provtype2003\_01\_2). These variables were then linked to data pertaining to specific services received, payment of services, and duration and usefulness of visits mentioned above (for example C\_Phyth2003\_01\_1 indicating that physical therapy was received by the first SVRA provider). Provider types were classified as shown in Table V.9.

TABLE V.9  
 NUMERIC VALUES ASSOCIATED WITH PROVIDER TYPES

Provider Type	Description
1	SVRA
2	Welfare Agency
3	Mental Health Agency
4	Other State Agency
5	Private Business
6	Other Non-State Agency
7	School
8	Unemployment Office
9	Unknown Employment/Training
10	Clinic/Hospital/MD
11	Rehabilitation Treatment Center
12	Other Medical/Mental Health Provider
13	Unknown Medical/Mental Health Provider

Source: NBS, round 1.

Additional constructs were created that summarized provider types across services, for example C\_EvrUseSVR, (indicating that the sample member ever used an SVRA), and

C\_UseSVR2003, (indicating that an SVRA was used in 2003); and specific services received across providers, for example C\_PHYTH2003 (received physical therapy in 2003), C\_OCCTHER2003 (received occupational therapy in 2003), and so on.

For the Public Use File, the source variables and intermediary constructs related to the data collection grid (\_1-\_34) are not provided. Due to small cell sizes, welfare agency (type=2), other non-state agency (type=6), and unemployment office providers (type=8) were combined with provider type other state agency (type=4). Provider type=9 (unknown employment provider) and type=13 (unknown medical provider) were dropped. For the Public Use File, second and third providers for many provider types were dropped due to small cell sizes.

## **VI. SAMPLING WEIGHTS**

The final analysis weights for the Representative Beneficiary Sample and the Ticket Participant Sample were determined via a three-step process: (1) calculate the initial weights, (2) adjust weights for two phases of nonresponse (location and completion), and (3) poststratification. This chapter describes these computations for both the Representative Beneficiary Sample and the Ticket Participant Sample. Section A summarized the procedures used to compute and adjust the sampling weights and the procedures for creating composite weights. (Composite weights were used to combine the Representative Beneficiary Sample and the Ticket Participant Sample to analyze the full beneficiary population.) Procedures to computing the weights for the Representative Beneficiary Sample are described in detail in Section B. Section C covers the same information for the Ticket Participant Sample. Because there was an error in Section E of the CATI and CAPI program, we computed special weights for the analysis of response to this section. The computation of these weights is described in Section D of this chapter. The final section describes the procedures for variance estimation for this survey.

### **A. COMPUTING AND ADJUSTING THE SAMPLING WEIGHTS: A SUMMARY**

#### **1. Representative Beneficiary Sample**

The sampling weights for any survey are computed from the inverse selection probability that incorporates the stages of sampling in the survey. The Representative Beneficiary Sample was selected in two stages: primary sampling units (PSUs) were selected as part of the round 1 sampling activities, and the individuals within the PSUs were selected from a current database of

beneficiaries.<sup>18</sup> We used four age-based strata in each PSU. In particular, beneficiaries were stratified into the following age groups: 18- to 29-year-olds, 30- to 39-year-olds, 40- to 49-year-olds, and 50- to 64-year-olds. Because we used a composite size measure to select the PSUs, we can achieve equal probability samples in the age strata and nearly equal workload in each PSU for the Representative Beneficiary Sample.<sup>19</sup>

For the initial beneficiary sample, we selected more sample members than we expected to need, to account for differential response and eligibility rates in the PSUs and sampling strata. This “augmented” sample was randomly partitioned into subsamples (called waves), where only some of the waves were used to form the actual final sample. We released an initial set of waves and then monitored data collection to identify which PSUs and strata required additional sample. After the sample members in the initial waves were released for the final sample, we were able to limit the number of additional sample members (in subsequent released waves) only to those PSUs and strata requiring them, and so were able to achieve sample sizes that were close to our targets. Controlling the release of sample also allowed us to control the balance between data collection costs and response rates. The initial sampling weights were computed based on the inverse of the selection probability for the augmented sample. Naturally, only a subset of the augmented sample was actually released, so these initial weights were adjusted for the actual sample size. The release-adjusted weights were post-stratified to population totals obtained from the Social Security Administration (SSA).<sup>20</sup>

---

<sup>18</sup> An intermediate stage of sampling of secondary sampling units (SSUs) was used in two PSUs, but for the sake of simplicity, these are generally treated as equivalent to PSUs in this description. All PSUs and SSUs were selected during the round 1 sampling activities.

<sup>19</sup> The composite size measure was computed from the sum of the products of the sampling fraction for a stratum and the estimated count of beneficiaries in that stratum and PSU (Folsom et al. 1987).

<sup>20</sup> These totals were obtained from a frame file provided by the Social Security Administration (SSA) that contains basic demographics for all SSI and SSDI beneficiaries.

To account for nonresponse, we used two response propensity models (using logistic regression methods) to estimate (1) a propensity score for locating a sample member and (2) a propensity score for response among located sample members. In our experience with this survey, factors associated with the inability to locate a person tend to be different from those associated with cooperation. The unlocated person cannot deliberately avoid or otherwise refuse to cooperate. For instance, that person may have chosen not to list his or her number or may frequently move from one address to another, but he or she has not specifically shown an unwillingness to cooperate with the survey itself. Located nonrespondents may deliberately avoid the interviewer or may be expressing displeasure or hostility toward surveys, in general, or the SSA, in particular.

For the two forms of nonresponse, we used logistic regression propensity modeling to identify factors associated with each dimension of nonresponse. To develop these models, we used information from the SSA data files and geographic information (such as urban/rural or geographic region) as covariates. Using a liberal level of statistical significance (0.3) in forward and backward stepwise regression models, we made an initial attempt to reduce the pool of covariates and interactions. Any covariate or interaction that was clearly unrelated to locating the respondent, or to response propensity, was excluded from the pool.

After this initial step was completed, a series of models was carefully evaluated by comparing the R-squared statistic<sup>21</sup> and other measures of predictive ability. Model-fitting also involved reviewing the statistical significance of the coefficients of the covariates in the model. We then used the specific covariate values for each located person (cooperating person) to

---

<sup>21</sup> The Generalized Coefficient of Determination (Cox and Snell 1989) is a measure of the adequacy of the model, where higher numbers indicate a greater difference between the likelihood of the model in question and the null model likelihood. The “Max rescaled R-Square” scales this value to have a maximum of 1.

estimate a propensity to be located (to cooperate). The inverse of these propensity scores is used to adjust the weights from the prior step of weight computations.

The final step is a series of post-stratification adjustments to have the weights sum to known totals obtained from SSA on various dimensions (specifically, gender, age grouping, and for beneficiaries only, recipient status<sup>22</sup>). After post-stratification, the weights underwent a quality assurance check to verify the correctness of the methods used to compute the weights at each step.

## **2. Ticket Participant Samples**

The Ticket Participant Samples were selected from the population of TTW participants, which was partitioned based on three different payment types in the TTW payment system (outcome-only, milestone-outcome, and traditional vocational rehabilitation).<sup>23</sup> The initial sampling weights for the Ticket Participant Samples were computed based on the inverse of the selection probability for the participant. As with the Representative Beneficiary Sample, we used the PSUs as the primary source of the sample members and, where possible, selected an initial larger (augmented) sample. For participants using the outcome-only payment system, the PSUs in the initial sampling design did not contain enough participants to support analysis tasks--even with all outcome-only participants in the PSUs selected for the sample. As a result, it was necessary to supplement the sample from the PSUs with Ticket participants who were not part of the initial sample design. The sample members within the initial sample design are referred to as

---

<sup>22</sup> Disability payments were made in the form of Supplemental Security Income (SSI), Social Security Disability Insurance (SSDI), or both.

<sup>23</sup> ENs may choose to be paid under one of two payment systems: (a) an outcome payment system or (b) an outcome-milestone payment system. Under each payment system, SSA will make up to 60 monthly payments to the EN for each assigned beneficiary who is not receiving DI or SSI payments because of work or earnings. Under the outcome-milestone payment system, SSA pays smaller monthly outcome payments in the event that the beneficiary leaves cash benefits, but will also pay the EN up to four milestones for work achieved by a beneficiary.

the clustered sample, and the supplemental sample, which was randomly selected from the entire population of outcome-only participants in two geographic strata (in the PSUs and not in the PSUs), was referred to as the unclustered sample.<sup>24</sup>

As with the Representative Beneficiary Sample, we first computed the weights for the augmented sample and then adjusted them for the number of sample members that were in the final sample.<sup>25</sup> For the Ticket Participant Samples, the size of the samples restricted the procedures useable for the nonresponse adjustments. Because Ticket participants were generally easier to locate due to their participation in the Ticket program, the number of Ticket participants who could not be located was very small. Hence, for Ticket participants, we used a single stage weighting class approach that combined the adjustment for locating the sample member and for response among the located sample members. The final adjustment for the participants weight was a poststratification adjustment to the counts of participants within subgroups defined by age and gender in the sampling frame.

### **3. Composite Weights**

Although the Ticket participant population constitutes a small subset of the beneficiary population, some analyses require a sample with enough individuals both within and outside the Ticket participant population. This can be accomplished by combining the Ticket Participant Sample and Representative Beneficiary Sample and using composite weights to account for the fact that the samples have been combined. When conducting analyses representing the

---

<sup>24</sup> The respondents who were in the in-PSU stratum of the unclustered sample were selected with certainty, appearing in both the clustered and unclustered samples. Hence, these duplicate cases had to be accounted for in the weighting process, discussed later.

<sup>25</sup> For the clustered sample of participants using the Outcomes-Only payment system, all participants in the PSUs were selected and were released for data collection.

beneficiary population, these weights can be used to make estimates about participants within the beneficiary population. (Analyses limited to the participants subpopulation use weights only from the Ticket Participant Sample.)

**a. Usage of Composite Weights in Practice**

The composite weight can be applied to any sample value in the combined Ticket Participant Sample and Representative Beneficiary Sample. The composite weights were calculated to account for participants that were in both the Representative Beneficiary Sample frame and the Ticket Participant frame. For respondents in the Representative Beneficiary Sample who were not Ticket participants, the composite weight is exactly the same as the original (nonresponse-adjusted) beneficiary weight, since these respondents were the sole representatives of the population of beneficiaries who were not Phase 1 TTW participants. However, for respondents in the Representative Beneficiary Sample who were Ticket participants, and for respondents in the Ticket Participant Sample, both samples represent the Phase 1 TTW participant population. Hence, the composite weights were determined by adjusting the original weights so that the total sum of composite weights for Ticket participants from both samples together would add up to the total number of people in the Participant sampling frame: 21,477.

**b. Conceptual Framework for Composite Weights**

To compute a survey estimate,  $Est(Y)$ , using information from both samples (such as, the proportion who are currently working) one cannot simply combine the two samples without adjusting the weights, because the Representative Beneficiary Sample includes a small number of Ticket participants who represent the TTW Phase 1 participant population. The Ticket

participant sample represents this same population. Separate estimates can be computed for Ticket participants from each sample and combined using the equation,

$$\text{Est}(Y) = \lambda Y(\text{Participant}) + (1 - \lambda) Y(\text{Beneficiary})$$

where  $Y(\text{Participant})$  is the survey estimate from the Ticket Participant Sample,  $Y(\text{Beneficiary})$  is the survey estimate among Ticket participants from the Representative Beneficiary Sample, and  $\lambda$  is an arbitrary constant between 0 and 1. For the round 1 data, there were 22 Ticket participants who responded to the survey in the Beneficiary Sample, and 1,083 Ticket participants who responded to the survey in the Ticket Participant Sample. In our example, the estimates to be combined are the proportion of the 22 Ticket participants in the Beneficiary Sample who are currently working, and the proportion of the 1,083 people in the Ticket Participant Sample who are currently working. For the sampling variance,  $V(Y)$ , the estimate is computed using the equation,

$$V(Y) = \lambda^2 V(Y(\text{Participant})) + (1 - \lambda)^2 V(Y(\text{Beneficiary}))$$

where  $V(Y(\text{Participant}))$  is the sampling variance for the estimate from the Ticket Participant Sample, and  $V(Y(\text{Beneficiary}))$  is the sampling variance for the estimate among Ticket participants from the Representative Beneficiary Sample. Any value of  $\lambda$  will result in an unbiased estimate of the survey estimate, but not necessarily an estimate with the minimum sampling variance. A lambda value producing a sampling variance at its minimum value results in the shortest confidence interval and, by implication, the most precise point estimate.

A value of lambda that minimizes the variance can be calculated as,

$$\begin{aligned} \lambda &= 1/V(Y(\text{Participant})) / [1 / V(Y(\text{Participant})) + 1 / V(Y(\text{Beneficiary}))] \\ &= V(Y(\text{Beneficiary})) / [V(Y(\text{Participant})) + V(Y(\text{Beneficiary}))]. \end{aligned}$$

In this case, the minimum variance is,

$$V(Y) = [V(Y(\text{Participant})) * V(Y(\text{Beneficiary}))] / [V(Y(\text{Participant})) + V(Y(\text{Beneficiary}))].$$

To compute the combined-sample estimate with minimum variance, survey estimates are derived by first computing the estimates for each sample, computing a value of  $\lambda$  for each pair of estimates and then combining the point and variance estimates. Although this process produces minimum variance estimates, it is computer intensive and results in some inconsistencies among estimates for percentages and proportions because of differing values of  $\lambda$  among levels of categorical variables.

In this study, we used an alternative approach, which is to identify one or more values of lambda, select a single value based on these lambdas, and compute combined-sample weights. We computed 16 lambdas for a set of 16 variables identified by TTW Project Part A contract staff.<sup>26</sup> These variables are presented in Table VI.1. The median of these lambdas (0.101) was used as the final lambda value for the composite weights because the median is a measure of central tendency less affected by extreme values. This produced a value of lambda that was close to optimal for most variables—that is, it resulted in composite weights that gave minimum variance. For analytic purposes, the simplicity of having a single combined sample weight (based on a single lambda estimate) outweighed any concerns of suboptimality for a small number of variables. To compute the composite weight for each sample member in the Ticket Participant Sample, we used,

$$WT(\text{Combined}) = \lambda WT(\text{participant nonresponse adjusted weight}).$$

---

<sup>26</sup> The TTW contract was split into two parts, Part A and Part B. Sampling, weighting, and imputation procedures were conducted under Part B of the contract and analyses under Part A of the contract.

For respondents in the Representative Beneficiary Sample who were Ticket participants,  
 $WT(\text{Combined}) = (1 - \lambda) WT(\text{beneficiary nonresponse adjusted weight})$ .

TABLE VI.1  
 VARIABLES USED TO DEFINE WEIGHT COMPOSITING FACTOR (LAMBDA)

Variable Name	Variable Description
B24	Is the sample member currently working?
B28	Has the sample member been looking for work in the past 4 weeks?
B30	Did the sample member work at a job or business for pay in 2003?
B37	Do the sample member's goals include getting a job, moving up in a job, or learning new job skills?
B47a	Does the sample member see himself or herself continuing to work for pay in the next year
B47b	Does the sample member see himself or herself working and earning enough to stop receiving disability benefits in the next year?
B47c	Does the sample member see himself or herself continuing to work for pay in the next five years?
B47d	Does the sample member see himself or herself working and earning enough to stop receiving disability benefits in the next five years?
K3	What is the sample member's personal income in the last month, before taxes?
L24	What is the sample member's annual 2003 household income?
C_usesvr2003	Did the sample member use state vocational rehabilitation services in 2003?
C_usesmenh2003	Did the sample member use state mental health services in 2003?
C_useothst2003	Did the sample member use other state provider services in 2003?
C_usepriv2003	Did the sample member use private business services in 2003?
C_useoth2003	Did the sample member use other services in 2003?
C_fedpovertylevel	Was the sample member above the federal poverty level in 2003?

Source: NBS, round 1.

As described previously, respondents who were in the Representative Beneficiary Sample who were not Ticket participants had no change to their weight. That is,

$$WT(\text{Combined}) = WT(\text{beneficiary nonresponse adjusted weight}).$$

After the composite weight was computed, point and variance estimates could be computed directly using any survey data analysis software package.

In the following sections, we will describe in more detail the procedures for nonresponse adjustment of weights, first for the Representative Beneficiary Sample and then for the Ticket Participant Samples.

## **B. REPRESENTATIVE BENEFICIARY SAMPLE**

### **1. Initial Weights**

The initial weights were computed using the inverse of the probability of selection. For the Representative Beneficiary Sample, samples were selected independently in each of four age strata in each geographic unit or PSU.<sup>27</sup> The number of sample members selected in each stratum and PSU for the augmented sample was determined by allocating three times the target sample size across the 84 geographic units (PSUs and secondary sampling units) independently for each stratum.<sup>28</sup> This ensured that plenty of reserve sample units were available in case response or eligibility rates were lower than expected. The augmented sample size for the three younger age strata (18 to 29 years, 30 to 39 years, and 40 to 49 years) was 6,000 sample members (three times the target sample size of 2,000) and for beneficiaries 50 to 64 years, the augmented sample size was 3,600 (again three times the target sample size of 1,200). By using the composite size measure described previously, the initial weights for the full augmented sample of 21,600 sample

---

<sup>27</sup> The sample of PSUs contained 79 unique selections. Because of the size of its beneficiary population, the PSU representing Los Angeles (LA) county received two selections. Within the LA PSU, secondary sampling units (SSUs) were formed and four SSUs were selected. In the PSU representing Cook County, IL, (Chicago) SSUs were also formed to decrease travel costs and two SSUs were selected. These six SSUs and the other 77 PSUs (83 units) are treated as PSUs for the beneficiary sample.

<sup>28</sup> An augmented sample that was three times as large as needed was selected to allow for adequate supplemental sample in all PSUs and sampling strata within the PSUs and to account for expected variation in the response and eligibility rates across PSUs and sampling strata.

members were calculated by taking the inverse of the global sampling rate ( $F_i$ ) for each stratum.

The global sampling rates and initial weights are given in Table VI.2.

TABLE VI.2

SURVEY POPULATION AS OF JUNE 30, 2003, AUGMENTED SAMPLE SIZES AND INITIAL WEIGHTS BY SAMPLING STRATA IN THE NATIONAL BENEFICIARY SURVEY

Sampling Strata (Ages as of June 30, 2003)	Survey Population <sup>a</sup>	Augmented Sample Size <sup>b</sup>	Global Sampling Rate ( $F_i$ )	Initial Sample Weights	Released Sample
Beneficiaries between 18 and 29 years old	952,074	6,000	0.006302	158.7	2,514
Beneficiaries between 30 and 39 years old	1,278,292	6,000	0.004694	213.0	2,516
Beneficiaries between 40 and 49 years old	2,362,583	6,000	0.002540	393.8	2,516
Beneficiaries between 50 and 64 years old	4,827,983	3,600	0.000746	1,341.1	1,518
<b>Total</b>	<b>9,420,932</b>	<b>21,600</b>			<b>9,064</b>

Source: Sample allocation and counts computed by MPR.

<sup>a</sup>The survey population represents all Supplemental Security Income (SSI) and Social Security Disability Insurance (SSDI) beneficiaries.

<sup>b</sup>The Augmented Sample was designed to account for the variability in the eligibility and response rates across 320 cells defined by the 80 PSU selections and 4 sampling strata within each PSU. Having a substantial reserve sample in each cell ensured no further sampling was needed and additional sample could be released quickly.

As described previously, the full sample was randomly partitioned into subsamples called waves that mirrored the characteristics of the full sample. The waves were formed in each of the four sampling strata in the 84 geographic units (a total of 336 combinations of PSU and sampling stratum). At the start of data collection, a preliminary sample was assigned to the data collection effort and additional waves of sample were assigned as needed, based on experience with eligibility and response rates. Within the 336 combinations of PSU and sampling strata, the initial weights were adjusted to account for the number of waves assigned to data collection. The final sample size for the Representative Beneficiary Sample was 9,064 beneficiaries, as shown under “Released Sample” in Table VI.2.

## **2. Nonresponse Adjustments**

In virtually all surveys, the sampling weights must be adjusted to compensate for the sample members that cannot be located or who, once located, refuse to respond. First, weighted logistic regression models were fitted where the binary response was whether the sample member could be located. Models were fitted by first identifying a pool of covariates to work from using stepwise regression (as noted earlier), then carefully comparing candidate models using various measures of goodness of fit and predictive ability. This process was repeated among respondents who were located, where another weighted logistic regression model was fitted. The two levels in the binary response for this model were “respondent” versus “nonrespondent.” For the Representative Beneficiary Sample, a sample member was classified as a respondent if the sample member or person responding for the sample member completed the interview (that is, an eligible respondent), or the sample member was determined to be ineligible (that is, an ineligible respondent). Ineligible sample members included persons who were never SSA beneficiaries, were in the military service at the time of the survey, were incarcerated, had moved outside of the United States, or were deceased at the time of the survey.

Using the procedures outlined above, the main factors or attributes affecting our ability to locate and interview the sample member included the personal characteristics of the sample member (race, gender, and age), the type of beneficiary (recipient of SSI, SSDI, or both), identity of the payee with respect to the beneficiary, whether the beneficiary and the applicant for benefits lived in the same location, the number of times the beneficiary moved in the past five years (based on information from the SSA “finder” database), primary disability classification, and geographic characteristics.

### **a. Coding of Survey Dispositions**

The status of each sample member was maintained in the MPR Survey Management System during the survey and a final status code was assigned after the completion of all locating and interviewing efforts on a sample member, or at the end of data collection. For the nonresponse adjustments, we classified the final status codes into four categories:

1. Eligible respondents.
2. Ineligible respondents (sample members who were ineligible after sample selection, including deceased, sample members in the military or incarcerated, sample members living outside of the United States, and other ineligible).
3. Located nonrespondents (including active or passive refusals, language barrier situations, and so on).
4. Unlocated sample members (sample members who could not be located either using central office tracing procedures or in-field searches).

This classification of the final status code allowed us to measure the overall response rate, the completion rate among located sample members, and the location rate among all sample members.

### **b. Response Rates**

The response rate for the Representative Beneficiary Sample quoted in the introduction of this document as 77.5 percent is the **weighted overall completion rate**, given in the first line of Table VI.3. This response rate is the weighted count of sample members for whom a completed interview was obtained or who were determined to be ineligible, divided by the weighted sample

count of all sample members.<sup>29</sup> It can be determined by taking the product of the weighted location rate and the weighted cooperation rate, also known as the weighted completion rate among located sample members.

TABLE VI.3

WEIGHTED LOCATION AND WEIGHTED RESPONSE RATES FOR REPRESENTATIVE BENEFICIARY SAMPLE BY SELECTED CHARACTERISTICS

	Sample	Located Sample	Response among Located Sample		Overall Respondents
	Count	Count	Location Rate	Count	Response Rate
<b>All</b>	9,064	8,269	92.5	6,978	83.8
<b>SSI Only , SSDI Only or Both SSI and SSDI</b>					
SSI Only	3,894	3,449	89.3	2,938	84.3
SSDI Only	3,323	3,110	94.2	2,595	83.4

<sup>29</sup> This response rate is the weighted count of sample members for whom a completed interview was obtained or who were determined to be ineligible divided by the weighted sample count of all sample members (# of completed interviews + # partially completed + # of ineligible) / (# of cases in the sample). It can be determined by taking the product of the weighted location rate and the weighted cooperation rate, also known as the weighted completion rate among located sample members. This response rate is basically equivalent to the AAPOR standard response rate calculation:  $RR_{AAPOR} = \# \text{ of completed interviews} / (\# \text{ of cases in the sample} - \text{estimated } \# \text{ of ineligible cases})$ . Ineligible cases are included in the numerator for two reasons: (1) the cases classified as ineligible are part of the original sampling frame (and hence the study population). We obtained complete information to fully classify these cases (i.e., their responses to the eligibility questions in the questionnaire are complete) and therefore classify them as respondents; (2) incorporating the ineligible in the numerator and denominator of the response rate is essentially equivalent to the definition of a response rate with these cases excluded if the persons with an additional estimation of the number of eligible cases among those with eligibility unknown. By including the ineligible cases in the numerator and denominator, we avoid using this estimation stage and the response rate computation is more clearly explicated.

Source: NBS, round 1.

The weighted rates are used because (1) the sampling rates (therefore the sampling weights) vary substantially across the sampling strata as seen in Table VI.2; and (2) the weighted rates better reflect the potential for nonresponse bias. The weighted rates represent the percentage of the full survey population for which we were able to obtain information sufficient either to use in the data analysis or to determine as ineligible for the analysis.

### c. Factors Related to Location and Response

In addition to overall response rate information, Table VI.3 also provides information for selected factors associated with locating a sample member, and factors associated with response among located sample members. The table includes the unweighted counts of all sample members, counts of located sample members, and counts of the sample members for whom a completed interview was obtained or who was determined to be ineligible. The table also includes the weighted location rate, the weighted completion rate among the located sample members, and the weighted overall completion rate for these factors, which helped inform the decision about the final set of variables used in the nonresponse adjustment models.

The **weighted location rate** is the ratio of the weighted sample count for located sample members to the weighted count of all sample members, given in Table VI.3 as 92.5 percent. The **weighted cooperation rate** (the weighted completion rate among located sample members), 83.8 percent in Table VI.3, is the weighted count of sample members for whom a completed

interview was obtained, or who were determined to be ineligible, divided by the weighted sample count of all located sample members. Weighted cooperation rates reflect the common survey situation that once a person is located, repeated contact efforts will result in a completed interview.

#### **d. Propensity Models for Weight Adjustments**

A commonly used method to compute weight adjustments is to form classes of sample members with similar characteristics and to use the inverse of the class response rate as the adjustment factor in that class. The adjusted weight is the product of the sampling weight and the adjustment factor. The “weighting classes” are formed to ensure sufficient counts in each class to make the adjustment more stable (that is to have a smaller variance). The natural extension to the weighting class procedure is to use logistic regression with the weighting class definitions used as covariates, provided each level of the model covariates have sufficient number of sample members to ensure a stable adjustment. The logistic regression approach also has the ability to include both continuous and categorical variables, and standard statistical tests are available to evaluate the selection of variables for the model. For the location and the cooperation weight adjustments, we used logistic models to estimate the propensity for a sample member to be located and to cooperate. The inverse of the propensity score was used as the adjustment factor. The adjusted weight for each sample case is the product of the initial sampling weight and the adjustment factor.

The models were developed using the main effects described previously, plus selected interactions. To identify candidate independent variables and interactions among these variables for the modeling, we first ran a chi-squared automatic interaction detector (CHAID) analysis in SPSS to find possible significant predictors. CHAID is normally attributed to Kass (1980) and Biggs, et al. (1991), and its application in SPSS is described in Magidson (1993). The CHAID

procedure iteratively segments a data set into mutually exclusive subgroups that share similar characteristics based on their effect on nominal or ordinal dependent variables. It automatically checks all variables in the data set and creates a hierarchy that shows all statistically significant subgroups. The algorithm finds splits in the population, which are as different as possible based on a chi-square statistic. It is a forward stepwise procedure; it finds the most diverse subgrouping, and then each of these subgroups is further split into more diverse sub-subgroups. Sample size limitations are set to avoid generating cells with small counts. It stops when splits no longer are significant; that is, that group is homogeneous with respect to variables not yet used or when the cells contain too few cases. The CHAID procedure results in a tree that identifies the set of variables and interactions among the variables that have an association with the ability to locate a sample member (and the propensity of a located sample member to either respond or be ineligible).

The variables and interactions identified using CHAID were then processed using forward and backward stepwise regression (using SAS Logistic procedure with weights normalized to the sample size) to further refine the candidate variables and interaction terms.<sup>30</sup> After identifying a smaller pool of main effects and interactions for potential inclusion in the final model, a set of models were carefully evaluated to determine the final model. Because the SAS logistic procedure does not incorporate the sampling design, the final selection of the covariates was accomplished using the logistic regression procedure in SUDAAN.

For selecting variables or interactions in a model, we included variables or interactions that have a statistical significance level (alpha level) of 0.30 or lower (instead of the standard 0.05).

---

<sup>30</sup> Because no automated stepwise procedures are available in SUDAAN, the stepwise procedures described here were performed using SAS.

We used a higher significance level because the purpose of the model was to improve the estimation of the propensity score and not to identify statistically significant factors related to response. In addition, the information sometimes reflected proxy variables for some underlying variable that was both unknown and unmeasured. The variables used as main effects and the interaction in the model are summarized in Table VI.4 for locating a sample member and in Table VI.5 for cooperation among located sample members. The R-squared is 0.024 for the location model and 0.031 for the cooperation model. These values are similar to those observed for other response propensity modeling efforts using logistic regression with design-based sampling weights.

 MOVE \* SEX

**Three-factor interactions**  
 MOVE \* RACE \* SEX  
 MOVE \* SEX \* REPREPAYEE  
 MOVE \* REPREPAYEE \* PDZIPSAME

---

\* The factors are described in the text.

The primary factors in the location model include:

1. **MOVE.** The number of address changes in the past five years; three levels: (1) one or two moves, (2) no moves or old information, and (3) no information available about number of moves.<sup>31</sup>
2. **RACE.** Two levels: (1) Hispanic, non-Hispanic black, and other/unknown, and (2) non-Hispanic white, non-Hispanic American Indian, and non-Hispanic Asian-Pacific Islander.<sup>32</sup>
3. **REPREPAYEE.** The identity of the payee with respect to the beneficiary; four levels: (1) the beneficiary received benefit payments himself or herself, (2) a family member received payments on behalf of the beneficiary, (3) an institution received payments on behalf of the beneficiary, and (4) other or unknown.
4. **PDZIPSAME.** Whether the beneficiary and the applicant for benefits lived in the same zip code; two levels: (1) beneficiary and applicant lived in the same zip code, and (2) beneficiary and applicant lived in different zip codes, or information unknown.
5. **METRO\_IM.** Whether the beneficiary lived in a metropolitan area with a million or more residents; two levels: (1) beneficiary lived in metropolitan area with a million or more residents; and (2) beneficiary lived does not reside in such an area.
6. **GENDER (SEX).** Two levels: (1) female, and (2) male or unknown.

Various interactions among these variables were also included in the model for locating the sample member. The main effects using the variable names listed above, as well as interactions, are provided in Table VI.4. An expanded form of Table VI.4, showing the specific levels of the interactions shown in Table VI.4, along with parameter estimates and their standard errors, is provided in Appendix H.

For the cooperation models, the primary factors include:

1. **PSUI-PSU6.** Beneficiary residence; six indicator variables with various groupings of PSUs, as identified by CHAID.

---

<sup>31</sup>A single respondent (out of 9,064) with four moves was included in the category “no information.” Nine respondents with three moves were included in the “no moves or old information” category.

<sup>32</sup>Fifty in this category were subsequently identified as Hispanic.

2. **GENDER (SEX).** Two levels: (1) female, and (2) male or unknown.
3. **SSI\_SSDI.** Beneficiary recipient benefit type; three levels: (1) SSDI Only, (2) SSI Only, and (3) both SSI and SSDI.
4. **DIG.** Disability diagnostic classification; two levels: (1) deaf or unknown disability, and (2) mental or physical disability (excluding deafness).
5. **REPREPAYEE.** The identity of the payee with respect to the beneficiary; two levels: (1) an institution received payments on behalf of the beneficiary, and (2) all other payees.
6. **PDZIPSAME.** Whether the beneficiary and the applicant for benefits lived in the same zip code; two levels: (1) beneficiary and applicant lived in the same zip code, and (2) beneficiary and applicant lived in different zip codes, or information unknown.

Once again, various interactions among these variables were also included in the model for the cooperation of the sample members. The main effects using these variable names, as well as interactions, are provided in Table VI.5. An expanded form of Table VI.5, showing the specific levels of the interactions shown in Table VI.5 along with parameter estimates and their standard errors, is provided in Appendix H.

### **3. Post-Stratification**

Post-stratification is the procedure in which the weighted sums of the response-adjusted weights are aligned to known totals external to the survey. This process offers face-validity for reporting population counts and has some statistical benefits. For the Representative Beneficiary Sample, we post-stratified to the 24 population totals obtained from SSA.<sup>33</sup> In particular, the totals were the total number of SSI/SSDI beneficiaries by age (four categories), gender, and recipient status (SSI only, SSDI only and both).

### **C. TICKET PARTICIPANT SAMPLES**

As noted earlier, the Ticket Participant Samples were selected from the population of TTW participants, a subset of all SSI/SSDI beneficiaries, which was partitioned based on different payment types in the TTW payment system (outcome-only, milestone-outcome, and traditional vocational rehabilitation). Ticket participants using the traditional payment system accounted for 84 percent (18,100 of 21,477 participants) at the time the sampling frame was developed. Participants using the milestone-outcome payment system totaled 2,809 participants (13 percent) and participants using the outcome-only payment system totaled only 568 participants (2.6 percent). Because the target sample size for each participant stratum was 333, the initial augmented samples of 1,000 and 935 participants were selected among participants using the traditional and the milestone-outcome payments systems, respectively. As was also noted earlier, the PSUs in the initial sampling design did not contain a sufficient number of outcome-only participants to support analysis tasks. As a result, the clustered sample, consisting of respondents

---

<sup>33</sup> These totals were obtained from a frame file provided by the Social Security Administration (SSA), giving information on basic demographics for all Supplemental Security Income (SSI) and Social Security Disability Income (SSDI) beneficiaries.

selected within the initial sample design, was supplemented by a sample randomly selected from the entire population of outcome-only participants (this was called the unclustered sample).

The clustered sample was part of the original sample design, so respondents were selected from within PSUs, whereas the unclustered sample included units that may or may not have been in the selected PSUs. The unclustered sample was therefore organized into two strata: in the PSU or not in the PSU, where respondents in the PSUs were selected with certainty. Hence, all respondents who were in the clustered sample also appeared in the in-PSU stratum of the unclustered sample. The weights for these duplicate cases had to be appropriately adjusted to account for a single respondent's appearance in two independent samples. The compositing scheme used to do this is discussed in more detail in the next subsection. In addition, respondents who could not be located by the central office<sup>34</sup> based on sample frame information were treated differently in the clustered and unclustered samples. In the clustered sample, potential respondents who could not be located were sent to the field for further follow-up, so that personal interviews could be attempted. In the unclustered sample, no further attempt was made to locate potential respondents who could not be located by the central office. If a sample member was selected as part of both the clustered and unclustered samples, and was sent to the field for further follow-up and located in the field, the response had to be treated differently between the two samples. For the sample respondent, the value in the clustered sample was recorded according to its final status in the field, whereas the value in the unclustered sample was recorded as "ineligible for field follow-up" and was treated as a respondent. Ticket participants were classified as ineligible in the unclustered sample because sample members with no field follow-up (in the unclustered sample) were not "selected" for field follow-up. These respondents are accounted for by those who had field follow-up in the clustered sample (and had

---

<sup>34</sup> The "central office" is the MPR Survey Operations Center (SOC).

been “selected” for field follow-up). This process is analogous to the accepted practice of subsampling of nonrespondents for more intensive effort—in this case, we subsampled cases for field follow-up. The final sample sizes for the participants sample are in Table VI.6.

TABLE VI.6  
SURVEY POPULATION AND INITIAL AND FINAL SAMPLE SIZES BY SAMPLING STRATA  
IN THE PARTICIPANT SURVEY

Sampling Strata (Payment System)	Survey Population	Initial Sample Size	Released Sample
<b>Total</b>	21,477	2,626 <sup>a</sup>	1,466
1. Traditional	18,100	1,000	441
2. Milestone-Outcome	2,809	935	455
3. Outcome-Only			
Clustered Sample	568	123	123
Unclustered Sample	568	568	447
In PSUs	123	123	123
Not in PSUs	445	445	324

Source: Sample allocation and counts computed by MPR.

<sup>a</sup>The initial and final sample sizes include 123 participants using the Outcomes Only payment system, who were in the PSUs and therefore, were part of both the clustered and unclustered samples. The unique sample sizes are 2,503 for the initial sample and 1,343 in the final sample size.

For the clustered samples for TTW participants, the sample was allocated across the 79 PSUs with the Los Angeles PSU receiving a double allocation because it had two selections. Because of the smaller population sizes, we used only the full PSUs; we did not use the secondary sampling units (SSUs) in the Los Angeles PSU (four SSUs) and in the Cook County (Chicago) PSU (two SSUs), which were used for the Representative Beneficiary Sample.

### 1. Initial Weights

The initial weights were computed based on the probability of selection within the PSU of the augmented sample and the probability of selection for the PSU. For the unclustered sample for the outcome-only participants, we computed the initial weights based on the selection probability within the two sampling strata (in one of the PSUs and not in any PSU). Since only a

portion of the augmented sample was actually released for use, the initial weights were then adjusted for the sample actually used in the survey.

## **2. Nonresponse Adjustment and Post-Stratification**

Because of the smaller sample sizes compared to the survey of all beneficiaries, we used only a single nonresponse adjustment (combining location and nonresponse) and the classic weighting class method for the nonresponse adjustments. However, we used a single logistic regression model across the three payment types to help form the weighting classes, with payment type included as a covariate in the model. In addition to payment type, variables used in the model were gender and geographic region (Census Region<sup>35</sup>), as well as interactions between these variables. Parameter estimates and their standard errors for this model are given in Appendix H. Only these variables had sufficient cell sizes across the three payment types to be used as viable covariates in the model. Completion rates overall and for each payment type are given for these two variables in Table VI.7 (for participants using either the traditional payment system or the milestone-outcome payment system) and Table VI.8 (for participants using the outcome-only payment system). Due to the fact that the nonresponse adjustment was accomplished in a single step (unlike the Representative Beneficiary Sample), no location and cooperation response rates were calculated, just an overall completion rate. Completion rates for a large selection of variables, overall and for each payment type, are presented in Tables VI.9 through VI.11.

---

<sup>35</sup> The U.S. Census Bureau divides the U.S. into four “Census Regions” ([http://www.census.gov/geo/www/us\\_regdiv.pdf](http://www.census.gov/geo/www/us_regdiv.pdf)): Northeast (New England, New York, Pennsylvania, New Jersey); Midwest (Ohio, Indiana, Michigan, Illinois, Iowa, Minnesota, Wisconsin, Missouri, Kansas, Nebraska, South Dakota, North Dakota); West (Hawaii, Alaska, Washington, Oregon, California, Arizona, New Mexico, Nevada, Utah, Colorado, Wyoming, Idaho, Montana); South (the remainder of the country)

Source: NBS, round 1.

After the nonresponse adjustment, the weights were poststratified to the population totals as obtained from the SSA sampling frame of all SSI or SSDI beneficiaries.

### 3. Dual Frame Estimation

To obtain estimates for the outcome-only Ticket Participant Samples, it was necessary to combine the clustered and unclustered samples using a “paired sample design.” As noted earlier, if a potential respondent in the unclustered sample could not be located in the central office, he or she was considered “ineligible for field follow-up” and nothing further was attempted on that case. However, if a potential respondent in the clustered sample could not be located in the

central office, the case was sent to the field for additional locating efforts (field follow-up). The paired sample design is the methodology used to combine the samples while accounting for these different rules of field follow-up.

Consider the population of participants in the relevant payment type as the target population, which can be separated into two parts: the portion that requires field follow-up and the portion that does not. For the portion of the target population that does not require field follow-up (that is, it can be located by central office locating efforts), both the clustered and unclustered samples are independent samples that can provide unbiased estimates for this subpopulation. However, for the other portion of the target population that does require field follow-up (that is, cannot be located by central office locating efforts), since unclustered sample cases were not eligible for field follow-up, only the clustered sample can provide unbiased estimates for this subpopulation.

Consider first the subpopulation that can be located by central office locating efforts. For this subpopulation, the clustered and unclustered samples can be combined using the compositing methods described previously (called a “dual frame” estimation procedure). More specifically, we used a set of 16 variables to compute the 16 lambda values for the composite weights and used the median value of the lambdas as the final lambda value for the composite weights. The median was used to find a value of lambda that was close to optimal for most variables, and to avoid the effect of very large or very small  $\lambda$  on the measure of a “typical”  $\lambda$ . To compute the composite weight for each sample member in the unclustered sample,

$$WT(\text{Outcomes}) = \lambda \text{ WT}(\text{unclustered nonresponse adjusted weight}).$$

For units in the clustered sample,

$$WT(\text{Outcomes}) = (1 - \lambda) \text{ WT}(\text{clustered nonresponse adjusted weight}).$$

These weights were for estimates of persons who could be located by central office locating efforts.

Next, consider the subpopulation of persons who could be not located by central office locating efforts. In the unclustered sample, persons who could not be located by central office tracing were considered ineligible, so only the clustered sample could be used. Hence, in this case, no combining is required, and the clustered weight is used directly:

$$WT(\text{Outcomes}) = 1 * WT(\text{clustered nonresponse adjusted weight}).$$

Since the weights for each subpopulation sum up to the total number of individuals in each subpopulation, the two subpopulations can simply be combined to form the entire target population.

These weights were poststratified to the population total (568 participants) for participants using the outcome-only payment system.

#### **D. SECTION E WEIGHTS**

There were two problems in Section E of the CATI questionnaire that resulted in eligible respondents not being asked certain questions. For example, all SSI beneficiaries were to be asked question E3, SSI beneficiaries who were 25 or younger at time of sampling (September 2004) and received SSI benefits before age 22 were to be asked question E12, and all SSDI beneficiaries were to be asked question E15. An instrument programming error resulted in beneficiaries who received both SSI and SSDI being skipped out of these questions. Additionally, if the interview of a sample member was interrupted and subsequently continued, the information about whether the case was SSI or SSDI was not kept in the system. Both problems were quickly fixed when discovered, but a number of respondents were not asked these questions (see Table VI.12). These three questions are:

- *E3 asks the respondent* if the beneficiary (who might be the respondent) has ever heard of a **Plan for Achieving Self-Support or a PASS Plan**. This is a Social Security incentive that lets beneficiaries set aside money to be used to help them reach a work goal. The money set aside does not affect their benefits.
- *E12 asks the respondent* if the beneficiary (who might be the respondent) has ever heard of the **student earned-income exclusion**. This is a Social Security incentive where if a beneficiary is in school, up to \$1,340 of earnings per month are not counted when Social Security figures the benefit.
- *E15 asks the respondent* if the beneficiary (who might be the respondent) has ever heard of a **Trial Work Period**. This is a Social Security incentive that lets beneficiaries earn above \$800 per month for nine months without losing their benefits.

<b>Total</b>	<b>7,603</b>	<b>7,603</b>	<b>7,603</b>

Source: NBS, round 1.

More details about Section E of the instrument can be found in the round 1 User’s Guide (Wright, et al. 2008).

To analyze Section E data, a revised set of weights was calculated that accounted for the missing data. In particular, the weights for Section E analyses were computed by ratio-adjusting the weights for beneficiaries and participants who did answer the questions to account for those beneficiaries and participants who were eligible to be asked the questions but were skipped. Table VI.13 summarizes the count of eligible sample members and the estimated eligible population size for each of three questions (E3, E12, and E15) and the number and weighted estimate of the population to whom the questions were asked correctly. Table VI.14 provides the weighted proportion of the eligible population who were asked the appropriate question.

TABLE VI.14

## SUMMARY OF RESPONSE ADJUSTMENTS FOR QUESTIONS E3, E12 AND E15

	Combined Samples		Beneficiaries		Participants	
	Percent Asked Question	Adjustment	Percent Asked Question	Adjustment	Percent Asked Question	Adjustment
<b>Eligible for Question E3 (SSI Beneficiaries)</b>						
All SSI Beneficiaries	60.8		61.5		63.9	
SSI Only	47.3	2.116	47.3	2.114	50.0	1.999
Both SSI and SSDI	86.0	1.163	87.9	1.138	81.2	1.232
<b>Eligible for Question E12 (SSI Beneficiary Younger than 25 at Sample Selection and who Received Benefits before age 22)</b>						
All SSI Eligible Beneficiaries	47.5		47.3		41.2	
SSI Only	53.1	1.884	52.8	1.895	56.0	1.784
Both SSI and SSDI	23.9	4.184	23.8	4.206	9.2	10.820
<b>Eligible for Question E15 (SSDI beneficiaries)</b>						
All SSDI Beneficiaries	45.0		45.0		40.4	
SSDI Only	55.5	1.802	55.5	1.802	52.1	1.918
Both SSI and SSDI	14.0	7.123	14.0	7.147	17.8	5.603

Source: NBS, round 1.

For question E3, the weighted percentage of people for which the question was asked was around 60 percent with 47 to 50 percent of the SSI only beneficiaries asked the question and 80 to 88 percent of the beneficiaries of both SSI and SSDI. For question E12, the eligible population were SSI beneficiaries who were younger than 25 at the time of sample selection and who also received benefits before age 22. For this question, the weighted percentages were lower overall (in the 40 to 48 percent range) and in the low to mid 50 percent range for SSI beneficiaries who were not also SSDI beneficiaries (adjustment factors less than 2.0), but less than 25 percent for the beneficiaries of both SSI and SSDI. The adjustment ratios for the weights of the beneficiaries of both SSI and SSDI were therefore in the range of 4 to 10. For question E15 (eligible population consisted of all SSDI beneficiaries), a similar pattern occurred and the overall weighted percentages were lower with response rate in the low to mid 50 percent range for SSDI

beneficiaries who were not also SSI beneficiaries, but less than 20 percent for the beneficiaries of both SSI and SSDI. The adjustment ratios for the weights of the beneficiaries of both SSI and SSDI were therefore in the range of 5 to 7. Because of the low response rates in some of the beneficiary groups, the data user is advised to be cautious with the use of estimates based on these questions.

## VII. IMPUTATIONS

In the NBS, the data collection instruments were administered using computer-assisted interviewing (CAI) technology. The CAI technology allows the use of automated routing to move the respondent to the applicable questions and also implements checks of the entered data for consistency and reasonableness. In addition, because the program will not allow a question to be left blank, the interviewer cannot proceed unless an appropriate response has been entered (“don’t know” and “refused” are included as response options and used as necessary). These processes substantially reduce the extent of item nonresponse for a complex survey, but some item nonresponse will still exist. Item nonresponse includes cases where the question was mistakenly not asked and cases where “don’t know” or “refused” were recorded as responses.

For the NBS, imputation was used to compensate for item nonresponse. Two imputation methods were primarily used: deductive (or logical) imputation and unweighted hot-deck imputation. However, for some variables, insufficient data were available to use one of these two methods, so other specialized imputation procedures were employed to use the data available. The methods were selected based on the type of variable (dichotomous, categorical or continuous), the amount of missing data, and the availability of data for the imputations. For some variables, imputations were processed using a combination of methods.

Where possible, imputed values were made consistent with pre-existing nonmissing variables by excluding donors with potentially inconsistent imputed values. After each imputation was processed, the imputed values were evaluated using a variety of quality control procedures. If the initial imputed value was out of an acceptable range or inconsistent with other data for that case, the imputation was repeated until the imputed value was in range and consistent with other reported data.

Deductive, or logical, imputation is the assignment of a value that can be deduced from other data, or for which there is a high degree of certainty that the value is correct. This method was based on a review of data related to the imputed variable.

The hot-deck imputation procedure entails the classification of sample members into mutually exclusive and exhaustive imputation classes (or imputation cells) of respondents who are assumed to be similar relative to the key population variables (such as age, disability status, and SSI recipient status). For each sample member with a missing value (a recipient), a sample member with complete data (a donor) is chosen within the same imputation class to provide a value. It is desirable to have the imputation class contain sufficient sample members to avoid the selection of a single donor for multiple sample members with missing data. The hot-deck procedure is computationally efficient and, in a recent National Center for Education Statistics working paper (USDE 2001), a simulation study showed that a hot-deck procedure fared well in comparison to more sophisticated imputation procedures, including multiple imputation, Bayesian bootstrap imputation, and ratio imputation. However, it should be noted that no attempt was made to estimate the component of variance due to imputation, even though such a component is always positive. Users should be aware that variance estimates using imputed data will be underestimates, with the amount of bias in the variance estimate directly related to the amount of missingness in the variable of interest. For most of the variables requiring imputation, the extent of missingness was low, so that this component would be very small.

The hot-deck imputation procedure used an unweighted selection process to select a donor, with selections done within imputation classes defined by key related variables for each application. This was accomplished in two ways. In one of the applications, in addition to the variables defining the imputation classes, a sorting variable was included where the recipient and all donors within the imputation class were sorted together by the levels of this variable. Using

the sorted data within the imputation class, a case immediately preceding or following a sample member with missing data was randomly selected as the donor with equal probability. In the other application, a donor was randomly selected from within the imputation class. With either method, we allowed with-replacement selection of a donor for each recipient. In other words, a sample member could have been a donor for more than one recipient. Because the extent of missing values was very low, only a few donors were used more than once.

The factors used to form the cells for each imputed variable needed to be appropriate for the population, the data collected, and the purpose of the study. The imputation classes also needed to have a sufficient count of donors for each sample member with missing data. We used a variety of methods to form the imputation classes. These methods included bivariate cross-tabulations, step-wise regressions, and multivariate procedures such as CHAID (Chi-squared Automatic Interaction Detection software attributed to Kass (1980) and Biggs, et al. (1991), and its application in SPSS is described in Magidson (1993)). To develop these imputation classes, we used information from both the interview and SSA data files. Classing and sorting variables were closely related to the variable being imputed (the response variable). Sorting variables were either less closely related to the response variable than classing variables, or were forms of the classing variables with finer levels. As an example of the latter situation, four age categories were sometimes used as imputation classes: (1) 18 to 29, (2) 30 to 39, (3) 40 to 49, and (4) 50 to 64. The actual age could then be used as a sorting variable, so that donors and recipients were as close together as possible in age.

The hot-deck software automatically identified situations where the imputation class only contained recipients and no donors. In these cases, imputation classes were collapsed and the imputation redone using the collapsed classes. The strategy for collapsing classes required a ranking of the variables used to define the imputation class with regard to each variable's

relationship to the variable requiring imputation. Those variables less closely related to the variable requiring imputation were more likely to have levels collapsed. In addition, variables with many levels were also more likely to have levels collapsed. In general, if more than a very small number of imputation classes required collapsing, then one or more variables were dropped from the definition of the imputation class and the imputation procedure was rerun.

Some variables were constructed from two or more variables. For some of the “constructed” variables, it was more efficient to impute the component variables and then to impose the recoding of the constructed variable on these imputed values. These component variables are not shown in the following tables because they were not included in the final data set.

For some of the imputed variables in the data set, the number of missing responses does not match the number of imputed responses. Often, these variables correspond to questions that follow a filter question. For example, question I33 asks if the respondent has difficulty climbing 10 steps and the follow-up question if the response is “yes”, I34, asks if the respondent is able to climb 10 steps at all. In order to be asked the follow-up question, the respondent must have answered “yes” to the screener question. If the respondent answered “no,” the follow-up question was coded a legitimate missing (“L”) which was not imputed. However, if the respondent refused to answer the screener question, the follow-up question was also coded a legitimate missing. If the screener variable was then imputed to be “yes,” the response to the follow-up question was imputed. This caused the count of the actual number of imputed responses to be greater than the number of missing or invalid responses.

#### **A. NBS IMPUTATIONS OF SPECIFIC VARIABLES**

Included below in several tables is information about how imputation was employed in the NBS. The tables include the imputed variable names and a brief description of each. The tables also include the methods of imputation, total number of missing responses, the number of

respondents eligible for the question, and the percentage of responses imputed. This information is recorded on the final file with an imputation flag, identified by the suffix “iflag”, which has the following eight levels: (.) legitimate missing or no answer, (0) self-reported data, (1) logical imputation, (2) administrative data, (3) hot-deck imputed, (4) imputation using the distribution of a variable related to the variable being imputed, (5) imputation based on specialized procedures specific to Section K, and (6) constructed from other variables with imputed values. In most cases, the logical assignments were done using imputed values.<sup>36</sup> Therefore, the distinction between “logically assigned” and “constructed from other variables with imputed values” is somewhat opaque. In general, if a logical assignment is done for variables corresponding directly to questionnaire questions, the flag is set to 1. For variables constructed from these variables (prefixed with a “C\_”), the flag is set to 6.

In the sections that follow, summaries of the imputations conducted are given, organized by the sections within the questionnaire to which the variables correspond. Details of some of the imputation types are given for each section.

## **1. Section L: Race and Ethnicity**

Several questions included on the NBS instrument gathered information on the respondents’ race and ethnicity. Two of these variables, located in Section L, include imputed responses and are described in Table VII.1. In particular, L1\_i corresponds to the question asking whether the respondent is Hispanic or not; C\_Race\_i corresponds to the question asking about the respondent’s race.

---

<sup>36</sup> No distinction was made between logical assignments using imputed values and logical assignments using self-reported values.

TABLE VII.1  
RACE AND ETHNICITY IMPUTATIONS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
L1_i	Hispanic/Latino Ethnic Origins	1 logical imputation, 10 imputations from SSA's administrative data, 124 imputations from random hot deck	135	7,603	1.78
C_Race_i	Race	116 imputations from SSA's administrative data, 176 imputations from random hot deck	292	7,603	3.84

Source: NBS, round 1.

In this table, respondents who did not indicate in the questionnaire whether they were Hispanic were classified as such if the SSA administrative data so indicated; the single logical imputation was conducted by looking at the name of the respondent and comparing it to a list of Hispanic names provided by the North American Association of Central Cancer Registries (NAACCR 2003). For respondents who still had missing data, the Hispanic indicator was imputed using a random hot deck using imputation classes defined by the zip code of each sample member.

Respondents could choose from five race categories: white, black/African American, Asian, Hawaiian/Pacific Islander, and Native American/American Indian. Respondents were allowed to select more than one of these categories to identify themselves (as prescribed by the Office of Management and Budget). The final race variable on which imputation was applied had six categories. Respondents who indicated Hawaiian/Pacific Islander were included with respondents reporting multiple races other than black/African American. A separate category was used for respondents reporting multiple races including black/African American. Although the SSA administrative data did not have a category for multiple races, respondents with race information in the SSA files were categorized according to four of the five categories above

(Hawaiian/Pacific Islanders were included with the respondents reporting Asian). Respondents who did not answer the race question but did have race information in the SSA files were categorized into one of the four categories. This resulted in misclassification of respondents with extant SSA administrative data who didn't answer the race question in the survey, but would have identified themselves in the survey as multiple race or Hawaiian/Pacific Islander. Hawaiian/Pacific Islanders were presumably misclassified as Asian using SSA administrative data. However, we assumed that the number of respondents like this was small so that misclassification was not a major problem. As with the Hispanic indicator, for respondents that still had missing data, race was imputed using a random hot deck using imputation classes defined by the zip code of each sample member.

## **2. Section B: Disability Status Variables and Work Indicator**

Table IV.2 describes five imputed variables that pertain to the sample member's disability status and an indicator whether the respondent was currently working. These imputed variables include three variables which collapse and recode primary diagnosis codes from the International Classification of Diseases, Ninth Revision (ICD-9) in three different ways (C\_MainConBodyGroup\_i, which corresponds to the collapsing done in Table V.4, C\_MainConDiagGrp\_i, and C\_MainConColDiagGrp\_i), age when the disability was first diagnosed (C\_DisAge\_i), and an indicator of childhood or adult onset of the disability (C\_AdultChildOnset\_i). A fourth variable with collapsed primary diagnosis codes was also imputed, with levels further collapsed from C\_MainConDiagGrp\_i. This variable (C\_MainConInput\_i) is not included in Table VII.2 because it was not released to the final file, but it was used in subsequent imputations as a classing variable. All missing values for C\_AdultChildOnset\_i were "logically assigned" using the imputed values from C\_DisAge\_i, the age-of-onset variable. In addition, Section B contains a question asking whether the respondent

was currently working (B24\_i). This question is a gate question for all of the work status variables in Section C.

TABLE VII.2  
DISABILITY STATUS IMPUTATIONS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_MainConDiagGrp_i	Primary diagnosis group	75 sequential hot deck	75 <sup>a</sup>	7,043	1.06
C_MainConColDiagGrp_i	Main condition diagnosis group collapsed	75 sequential hot deck	75 <sup>a</sup>	7,043	1.06
C_MainConBodyGroup_i	Main condition body group	75 sequential hot deck	75 <sup>a</sup>	7,043	1.06
C_Disage_i	Age at onset of disability	240 sequential hot deck	240	7,603	3.16
C_Adultchild_onset_i	Adult/child onset of disability	23 logical	23	7,603	0.30
B24_i	Currently working	10 random hot deck	10	7,603	0.13

Source: NBS, round 1.

<sup>a</sup> Includes 20 cases coded as don't know or refused on B1 and cases coded as don't know, refused, no condition reported, and uncodeable for diagnosis code variables.

For variables where hot-deck imputation was required, the sequential hot deck with a sorting variable was used for the recoded and collapsed diagnosis codes, as well as disability age. The work indicator variable used a random hot deck. All of the variables in Section B used an indicator of whether the onset of the disability was in childhood or adulthood, as well as age and gender to define imputation classes. One of the collapsed condition code variables, C\_MainConInput\_i was also used as a classing variable for disability age and the work indicator. Additional classing variables were used that were specific to the variable being imputed.

### 3. Section C: Current Jobs Variables

Several questions in the National Beneficiary Survey asked respondents about current employment. In Section C, these questions were only asked of respondents who indicated that they were currently working in question B24. They include salary (C\_MainCurJobHrPay\_i, C\_MainCurJobMnthPay\_i, and C\_TotCurJobMnthPay\_i), usual hours worked at the job or jobs (C8\_1\_i, C\_TotCurWkHrs\_i, and C\_TotCurHrMnth\_i), the number of places the respondent was employed (C1\_i), and job description of the place of main employment (C2\_1\_1d\_i). These variables are identified in Table VII.3.

TABLE VII.3  
CURRENT JOBS IMPUTATIONS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C1_i	Number of current jobs	1 random hot deck	1	1,155	0.09
C2_1_1d_i	Main current job SOC code to one digit	12 random hot deck	12 <sup>a</sup>	1,155	1.04
C8_1_i	Hours per week usually worked at current main job	35 random hot deck	35	1,155	3.03
C_TotCurWkHrs_i	Total weekly hours at all current jobs	35 logical, 4 constructed from imputed variables	39 <sup>b</sup>	1,155	3.38
C_TotCurHrMnth_i	Total hours per month at all current jobs	39 constructed from imputed variables	39	1,155	3.38
C_MainCurJobHrPay_i	Hourly pay at current main job	145 constructed from imputed variables	145	1,155	12.55
C_MainCurJobMnthPay_i	Monthly pay at current main job	121 logical, 29 imputed by distributional assumptions, 5 constructed from imputed variables	155	1,155	13.42
C_TotCurMnthPay_i	Total monthly salary all current jobs	29 logical, 126 sequential hot deck, 7 constructed from imputed variables	162	1,155	14.03

Source: NBS, round 1.

<sup>a</sup> Includes 10 cases coded as don't know or refused on B24 which were imputed at B24\_i.

<sup>b</sup> The 39 missing values do not include one case where the number of jobs was imputed to 1, but the number of hours at the main job was not missing. The flag for the total number of hours worked in this case was set to 0 ("self-reported"). The same is true for the missing values in the other total composite variables (C\_TotCurHrMnth and C\_TotCurMnthPay)

Some of the variables in this table had missing values that were not directly imputed. Rather, constituent variables not included in this table had missing values that were imputed, and then combined to form the variables below. For example, C\_TotCurWkHrs\_i was constructed from the number of hours per week usually worked at the current main job plus the number of hours for each of the respondent's other jobs. In most cases, the respondent worked one job so C\_TotCurWkHrs\_i was set equal to C8\_1\_i. However, if the respondent worked multiple jobs, and the number of hours in secondary jobs was imputed, then C\_TotCurWkHrs\_i was "constructed from imputed variables."

Other variables had values imputed by using the distribution of a variable related to the variable at hand. For example, if the take-home monthly pay of the respondent's current main job was not missing but the gross monthly pay (C\_MainCurJobMnthPay\_i) of the respondent's current main job was missing, then the relationship between gross monthly pay and take-home monthly pay among respondents missing neither variable was used to determine the appropriate value for gross monthly pay. In particular, a random draw was selected from the observed distribution of relative taxes, where "relative tax" is defined as the proportion of a respondent's pay devoted to tax. This randomly drawn relative tax was used to determine an imputed gross monthly pay for 29 cases with missing data for C\_MainCurJobMnthPay. As Table VII.3 indicates, hot-deck imputations were only applied to four of the jobs variables: C1\_i, C2\_1\_1d\_i, C8\_1\_i, and C\_TotCurMnthPay\_i. For C1\_i, C2\_1\_1d\_i, and C8\_1\_i, a random hot deck was used, with the collapsed condition code variable and level of education used as classing variables. Additional classing variables were also used that were specific to each variable. The sequential hot deck with a sorting variable was used in the imputation of missing values for C\_TotCurMnthPay\_i. The classing variables for this imputation were education, total number of hours worked on current jobs, collapsed job description code, and number of jobs, with the collapsed condition code variable used as a sorting variable.

#### 4. Section I: Health Status Variables

A total of 56 health status variables are in Section I of the National Beneficiary Survey questionnaire where imputations were applied. The 56 imputed variables in this section, and the methods of imputation used in each case, are identified in Table VII.4. These items cover a range of topics, from the respondent's general health to more specific questions on the instrumental activities of daily living (IADLs) and activities of daily living (ADLs) and other health and coping indicators. Also included in this section are a series of questions pertaining to the respondent's use of illicit drugs and alcohol.

TABLE VII.4  
HEALTH STATUS IMPUTATIONS

Variable Name	Description	Imputation Method <sup>a</sup>	Number Missing	Number Eligible	Percent Imputed
I1_i	Health during the past four weeks	21 hot deck	21	7,603	0.28
I9_i	Current health	51 hot deck	51	7,603	0.67
I17_i	Difficulty seeing	4 logical, 83 hot deck	87	7,603	1.14

Source: NBS, round 1.

<sup>a</sup> For all of the imputations using hot deck in this section, a random hot deck was used. There was therefore no need to distinguish between random and sequential hot decks.

An example of a logical assignment in this section: if a respondent did not answer whether they had difficulty seeing newsprint letters (I17), but indicated that they couldn't see newsprint letters at all (I18) or required special devices to read newsprint letters (I19), then I17\_i was logically assigned "yes."

As in previous sections, "constructed from imputed variables" refers to the fact that the constituent variables of each constructed variable were imputed.

All of the variables requiring imputation of missing values in the Health Status section were imputed using a random hot deck. The only classing variable that was common to all imputations was the collapsed condition code variable. Age and gender were also used in most imputations. The remainder of classing and sorting variables was specific to the variable being imputed.

## 5. Section K: Sources of Income Other than Employment

The imputed variables presented in this section are constructed variables that pertain to nonemployment-based income. These include worker's compensation, private disability claims, unemployment, and generally other sources of regular income. The imputed variables in this section are described in Table VII.5.

TABLE VII.5  
IMPUTATIONS ON SOURCES OF INCOME OTHER THAN EMPLOYMENT

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_AmtPrivDis_i	Amount received from private disability last month	85 logical, 37 imputed using specialized procedures	122	7,603	1.60
C_AmtWorkComp_i	Amount received from workers' compensation last month	40 logical, 3 imputed using specialized procedures	43	7,603	0.57
C_AmtVetBen_i	Amount received from veterans' benefits last month	35 logical, 18 imputed using specialized procedures	53	7,603	0.68
C_AmtPubAssis_i	Amount received from public assistance last month	60 logical, 35 imputed using specialized procedures	95	7,603	1.25
C_AmtUnemploy_i	Amount received from unemployment benefits last month	38 logical, 1 imputed using specialized procedures	39	7,603	0.51
C_AmtPrivPen_i	Amount received from private pension last month	42 logical, 16 imputed using specialized procedures	58	7,603	0.76

TABLE VII.5 (continued)

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_AmtOthReg_i	Amount received from other regular sources last month	49 logical, 24 imputed using specialized procedures	73	7,603	0.96

Source: NBS, round 1.

In this section, respondents were first asked if they had received money from a specific source and then for the specific amount received from that source. If a respondent could not provide a specific value, he or she was asked a series of questions on whether the value was above or below specific values, or was given the option of providing a range of values, where the optional ranges depended upon responses to a series of questions. After being classified according to a range of values that he or she provided, the respondent was assigned the median of the specific values provided by respondents who gave responses within the same range. If a respondent could not say whether the actual value was above or below a specific threshold, we imputed first the range (using a random assignment) and then assigned the median of the values provided by respondents who gave specific values within that range. If the respondent did not know if they received funds from a source, we then imputed whether they did or did not using a random hot deck, and then proceeded as above.

The logical assignments in this section derive from imputed values in the constituent questions. For example, if the respondent was imputed to not have received private disability insurance (K6a\_i), then C\_AmtPrivDis\_i was a logically assigned “no.” Otherwise, if any income was derived from these sources but an imputation was required at some point in the sequence (either everything was imputed, or just the individual income was imputed) then the imputation flag indicated imputation by “special procedures.”

For variables requiring hot-deck imputation, a random hot deck was used for all imputations. The classing variables were the same for all variables: an indicator of whether the respondent

was a recipient of SSI, SSDI, or both; living situation; and education. None of the variables requiring hot-deck imputation are listed in Table VII.5 because they were only component variables for the delivered variables listed in the table.

## **6. Section L: Personal and Household Characteristics**

Other than the personal characteristics of race and ethnicity discussed earlier, most of the imputed variables in section L pertain to household characteristics. These questions include education (L3\_i), marital status (L8\_i), cohabitation status (C\_Cohab\_i), number of children in the household (C\_NumChildHH\_i), household size (C\_Hhsize\_i), and poverty level (FedPovertyLevel\_cat1). Also included in this section is the constructed variable for the respondent's body mass index (C\_BMI\_cat\_i), since it is constructed of variables collected in section L. Most of these variables were imputed early in imputation processing and were used in the imputation of work status variables; however, poverty level was imputed later. Both sets of variables are discussed in this section.

The imputation of poverty level required the imputation of annual income and household size. The annual income question was another case of a specific value being requested, and if a specific value could not be provided, the respondent was asked if the annual income fell in certain ranges. For this item, some respondents provided a specific value; some respondents answered the questions on the ranges, and some refused to provide any information. Although annual income was a key variable used in the imputation of poverty level, it is not included in this table since it was not released in the final file. All of the missing values in C\_FedPovertyLevel\_cat1<sup>37</sup> were derived from the imputed annual incomes; hence all missing

---

<sup>37</sup> The name of this variable reflects that fact that the final variable was a categorical (as opposed to a continuous) measure of poverty levels.

values are “constructed from imputed variables.” Table VII.6 identifies imputed variables in section L.

TABLE VII.6  
IMPUTATIONS OF PERSONAL AND HOUSEHOLD CHARACTERISTICS

Variable Name	Description	Imputation Method	Number Missing	Number Eligible	Percent Imputed
C_BMI_Cat_i	Body Mass Index categories	6 logical, 286 hot deck	292	7,603	3.84
L3_i	Highest year/grade completed in school	162 hot deck	162	7,603	2.13
L8_i	Marital Status	53 hot deck	53	7,603	0.70
L11_i	Living arrangements	27 logical, 14 hot deck	41	7,603	0.54
C_NumChildhh_i	Number of children living in the household	6 logical, 12 hot deck	18	7,603	0.24
C_hhsize_i	Household Size	24 logical, 20 hot deck	44	7,603	0.58
C_cohab_i	Cohabitation Status	6 logical, 43 hot deck	49	7,603	0.64
C_FedPovertyLevel_cat1	2003 Federal Poverty Level	2,754 constructed from imputed variables	2,754	7,603	36.22

Source: NBS, round 1.

Logical assignments in this section are based on related variables also in this section. For example, the 27 logical assignments for L11\_i are due to the fact that 27 respondents did not answer L11, but indicated in L16 that only one adult lived in the household.

For all of the variables requiring hot-deck imputation that are listed in Table VII.6, a random hot deck was used. The only classing variable common to all imputations was the collapsed condition code variable. Other variables were specific to the variable being imputed. The imputed annual incomes that were used in the determination of C\_FedPovertyLevel\_cat1 were imputed using a sequential hot deck with a sorting variable.

## VIII. USING THE NBS RESTRICTED AND PUBLIC USE FILES

### A. FILE CONTENT AND TECHNICAL SPECIFICATIONS

The NBS round 1 Restricted Use File contains 7,603 records and 6,590 variables. The Public Use File contains 6,520 records and 703 variables. To reduce the risk of disclosure, individuals from the Ticket to Work participant sample are not included on the public file. Variables are positioned on the file in the following order:

**Survey Administration Variables.** These include variables related to survey administration including respondent type identifiers and other variables associated with the conduct of the survey.

**Sampling Variables and Weights.** These include administrative variables used for sampling purposes and administrative data that provide additional descriptive information about the sample.

**Variables from Section A-M of the NBS Questionnaire.** Variables are ordered within each section by related questionnaire item number. Constructed variables created from source variables within a section are ordered at the end of each section.

**SSA Administrative Data.** These include a select set of data from SSA administrative records to enhance analyses of Ticket to Work participants.

Both the Restricted Use File and Public Use File are available in a SAS “sas7bdat” format database. The Restricted Use File has the following technical specifications:

Data set name: NBSR1RAF  
Number of observations: 7,603  
Number of variables: 6,590  
Date last created: September 30, 2009

The Public Use File has the following technical specifications:

Data set name: NBSR1PUF  
 Number of observations: 6,520  
 Number of variables: 703  
 Date last created: September 30, 2009

**B. CHOOSING A SAMPLE AND WEIGHT VARIABLE**

As discussed in Chapter II, the NBS comprises two independent samples: (1) the National Representative Beneficiary Sample and (2) the Ticket Participant Sample. Use of the appropriate weight variables allows estimates of either the national beneficiary population or the TTW participant population. The weights specified below should be used when performing any analysis. Due to the design of the NBS and the variation of weights within sampling strata, the use of unweighted rather than weighted data in the analysis will provide incorrect results.

Separate weights were computed for each sample to account for the sampling method, data collection method, and the target populations of the survey: one for the Representative Beneficiary Sample (WGT1\_BENEFINL), one for the Ticket Participant Sample (WGT1\_PARTIFINL), and one for the combined Representative Beneficiary and Ticket Participant sample (WGT1\_COMBFINL). The prefix WGT is used to identify the three sample weights on the file. See Table VIII.1 for a summary of the appropriate weights for each population of interest.

TABLE VIII.1  
 NBS SAMPLE WEIGHTS

Weight Name	Description	Condition
WGT1_BENEFINL	Beneficiary weight	Orgsampinfo_Tstatus=2 (Representative Beneficiary Sample)
WGT1_PARTIFINL	Participant Weight	Orgsampinfo_Tstatus=1 (Ticket Participant Sample)
WGT1_COMBFINL	Composite Weight	Orgsampinfo_Tstatus=1 or 2 (Combined Sample)

It is not necessary to subset the file when using the weights and, in fact, subsetting the file may result in incorrect estimates and problems with running the computer software.<sup>38</sup> The weights equal 0.0 for any case that is not in the analysis population. The variable OrgSampInfo\_Tstatus identifies whether the case was selected for the Phase 1 Ticket Participant Sample (Orgsampinfo\_Tstatus=1) or for the Representative Beneficiary Sample (Orgsampinfo\_Tstatus=2). If the population of interest is the national beneficiary population, the Representative Beneficiary Sample weight (WGT1\_BENEFINL) should be used. This variable has a value greater than 0.0 for 6,520 cases (where Orgsampinfo\_Tstatus=2) and a weight value of 0.0 for the 1,083 participant sample cases. If the population of interest is the TTW participant population (for analyses using the Restricted Use File), the Ticket Participant Sample weight (WGT1\_PARTIFINL) should be used. This variable has a value greater than 0.0 for 1,083 participant cases (where Orgsampinfo\_Tstatus=1) and a weight value of 0.0 for the 6,520 beneficiary cases (where Orgsampinfo\_Tstatus=2).

A composite sample weight (WGT1\_COMBFINL) that combines the Ticket Participant Sample and the Representative Beneficiary Sample is also provided on the Restricted Use File (using all 7,603 cases). While this weight was provided to increase the sample size of the TTW participants for analyses of the national beneficiary population, it adds minimal additional analytic power. This weight can be used, however, in lieu of the Representative Beneficiary Sample weight (WGT1\_BENEFINL) for analysis of the national beneficiary population. When using the combined beneficiary and participant weight, the variable “flagparti” (rather than OrgSampInfo\_Tstatus) can be used to identify Ticket participants (flagparti=1). As discussed in

---

<sup>38</sup> The design-based sampling variance estimate is best computed using the full data file because if subsetting is performed, some values for the design-based sampling variance parameters will be missing in the subset file. This can cause the software to provide incorrect sampling variance estimates or the computer program may fail to run properly.

Chapter VI, 22 cases sampled as part of the Representative Beneficiary Sample also appeared on the Ticket Participant sampling frame. These cases can be identified as participants when using the combined weight using the variable flagparti.

As discussed in Chapter VI, there were various problems in Section E of the questionnaire that resulted in eligible respondents not being asked certain questions. All SSI beneficiaries were to be asked questions E3-E10 (awareness and use of PASS, Earned Income Exclusion, PESS, and Continued Medicaid Eligibility); SSI beneficiaries who were 25 or younger at time of sampling (September 2004) and who received SSI benefits before age 22 were to be asked questions E12-E13 (awareness and use of Student Earned-Income Exclusion); and all DI beneficiaries were to be asked questions E15-E18 (awareness and use of Trial Work Period and Extended Period of Eligibility for Medicare). Due to a specification error, beneficiaries who received both SSI and DI incorrectly skipped these questions. A second problem occurred when a respondent was unable to complete the interview in one session. When the interview continued in a second session, the information about the sample member's SSI and DI status, age at interview, and sample member type (Ticket Participant Sample or Representative Beneficiary Sample) was not saved in the system. Both problems were quickly fixed when discovered, but a number of respondents were not asked these questions. In the data file, those that incorrectly skipped the item are coded as .M (missing due to error). In addition, on the Restricted Use File, the variables E2Skip (Skipped E3 to E10), E12skip (Skipped E12 to E13), E15skip (Skipped E15 to E18), and E24skip (Skipped E24) are included to identify which respondents inappropriately skipped these items. A value of 1 on these items indicates that respondent was eligible to receive the item, but it was not administered.

Because these items are particularly important to SSA, a special set of weights was calculated to account for the missing data on items E3-E10, E12-E13, and E15-E18. These

weights should be used in lieu of the other sample weights on the file to provide national estimates for these particular items. Table VIII.2 provides the weights that should be used when analyzing items E3-E10, E12-E13, and E15-E18 with the Ticket Participant Sample, Representative Beneficiary Sample, and combined sample (included only on the Restricted Use File). In subsequent rounds of survey administration, longitudinal respondents who inappropriately skipped E2-E10, E12-E13, and E15-E18 and are re-interviewed will be asked these items.

TABLE VIII.2  
WEIGHTS FOR AWARENESS OF WORK INCENTIVE ITEMS IN SECTION E

Survey Items	Ticket Participant Weights	Beneficiary Weights	Combined Weights
E3 to E10	WGT1_PARTIFINLE3	WGT1_BENEFINLE3	WGT1_COMBFINLE3
E12 to E13	WGT1_PARTIFINLE12	WGT1_BENEFINLE12	WGT1_COMBFINLE12
E15 to E18	WGT1_PARTIFINLE15	WGT1_BENEFINLE15	WGT1_COMBFINLE15

### C. ESTIMATING SAMPLING VARIANCE FOR NBS

The sampling variance of an estimate derived from survey data for a statistic (such as a total, a mean or proportion, or a regression coefficient) is a measure of the random variation among estimates of the same statistic computed over repeated implementation of the same sample design with the same sample size on the same population. The sampling variance is a function of the population characteristics, the form of the statistic, and the nature of the sampling design. The two general forms of statistics are linear combinations of the survey data (for example, a total) and nonlinear combinations of the survey data. Nonlinear combinations include the ratio of two estimates (for example, a mean or a proportion in which both the numerator and the denominator are estimated) and more complex combinations such as regression coefficients. For linear estimates with simple sample designs (such as a stratified or unstratified simple random

sample) or complex designs (such as stratified multistage designs), explicit equations are available to compute the sampling variance. For the more common nonlinear estimates with simple or complex sample designs, explicit equations are not generally available and various approximations or computational algorithms are used to provide an essentially unbiased estimate of the sampling variance.

The NBS sample design involves stratification and unequal probabilities of selection. Variance estimates calculated from NBS data must incorporate the sample design features in order to obtain the correct estimate. Most procedures in standard statistical packages, such as SAS and SPSS, are not appropriate for analyzing data from complex survey designs, such as the NBS design. These procedures assume independent, identically distributed observations or simple random sampling with replacement. Although the simple random sample (SRS) variance may approximate the true sampling variance for some surveys, it is likely to substantially underestimate the sampling variance with a design as complex as the NBS design. Complex sample designs have led to the development of a variety of software options that require the user to identify essential design variables such as strata, clusters, and weights.<sup>39</sup>

The most appropriate sampling variance estimators for complex sample designs such as the NBS are the procedures based on the Taylor series linearization of the nonlinear estimator using explicit sampling variance equations and the procedures based on forming pseudo-replications<sup>40</sup>

---

<sup>39</sup> A website that reviews software for variance estimation from complex surveys, created with the encouragement of the Section on Survey Research Methods of the American Statistical Association, is available online at <http://www.fas.harvard.edu/~stats/survey-soft/survey-soft.html>. The site lists software packages available for personal computers and provides direct links to the home pages of these packages. The site also contains articles and links to articles that provide general information about variance estimation and links to articles that compare features of the software packages.

<sup>40</sup> Pseudo-replications are restricted or random subsamples of a specific survey sample, as opposed to true replications of the sampling design, which entails the selection of multiple independent samples using the same sampling design.

of the sample. The Taylor series linearization procedure is based on a classic statistical method in which a nonlinear statistic can be approximated by a linear combination of the components within the statistic. The accuracy of the approximation is dependent on the sample size and the complexity of the statistic. For most commonly used nonlinear statistics (such as ratios, means, proportions, and regression coefficients), the linearized form has been developed and has good statistical properties. Once a linearized form of an estimate is developed, the explicit equations for linear estimates can be used to estimate the sampling variance. Because the explicit equations can be used, the sampling variance can be estimated using many of the features of the sampling design (for example, finite population corrections, stratification, multiple stages of selection, and unequal selection rates within strata). This is the basic variance estimation procedure used in SUDAAN, the survey procedures in SAS, Stata, and other software packages to accommodate simple and complex sampling designs. To be able to calculate the variance, sample design information (such as stratum, analysis weight, and so on) is needed for each sample unit.

Currently, more survey data analysis software packages use the Taylor series linearization procedure and explicit sampling variance equations. Therefore, we developed the variance estimation specifications necessary for the Taylor series linearization procedure (PseudoStrata and PseudoPSU). Example code for this procedure using SAS and the survey data analysis software SUDAAN is given in Appendix I.<sup>41</sup> Details about syntax for SAS are available from SAS (SAS Institute 2004). Details about SUDAAN syntax are available from RTI International (Research Triangle Institute 2004).

---

<sup>41</sup> The example code provided in Appendix I is for simple descriptive statistics using the procedures DESCRIPT in SUDAAN and SURVEYMEANS in SAS. Other procedures in SAS (SURVEYREG, SURVEYFREQ, and SURVEYLOGISTIC) and in SUDAAN (CROSSTAB, REGRESS, LOGISTIC, MULTLOG, LOGLINK, and SURVIVAL) are available for more complex analyses. Since SUDAAN was created specifically for survey data, the range of analyses that can be performed with these data in SUDAAN is much wider than in SAS.

## **D. CODEBOOK**

To aid the user, two codebooks were developed by MPR; one for the Restricted Use File and one for the Public Use Files. Both codebooks are available as separate reports and can be obtained from Mathematica Policy Research: “The National Beneficiary Survey: Round 1 Public Use File Codebook” (Wright et al. 2009) and “The National Beneficiary Survey: Round 1 Restricted Use File Codebook” (Wright et al. 2009).

The codebooks provide extensive documentation for each variable on the file including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes. Frequency distributions and means are also included as appropriate.

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
B25	What are they (the other reasons you are not working that I didn't mention)?	a=A physical or mental condition prevents {you/him/her} from working b={ You/name } cannot find a job that {you are/(he/she) is} qualified for c={ You do/name does } not have reliable transportation to and from work d={ You are/name is} caring for someone else f={ You/name } cannot find a job {you want/(he/she) wants} g={ You are/name is} waiting to finish school or a training program h=Workplaces are not accessible to people with {your/name's} disability i={ You do/name does } not want to lose benefits such as Disability, Worker's Compensation, or Medicaid j={ Your/name's} previous attempts to work have been discouraging l=Others do not think {you/name} can work m=Employers will not give {you/name} a chance to show that {you/he/she} can work	n=Can't find a job/job market is bad o=Lack skills
B39	Who {do you/does NAME} discuss your work goals with the most?	01=PARENT/GUARDIAN 02=SPOUSE/PARTNER 03=FRIEND 04=JOB COACH 05=EMPLOYER/SUPERVISOR 06=OTHER RELATIVE 07=CASE WORKER/COUNSELOR/PROGRAM STAFF 08=MEDICAL PROVIDER 09=OTHER (SPECIFY: <OPEN>)	10=OTHER NON-RELATIVE

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
B42	Who else {do you/does NAME} discuss {your/his/her} work goals with?	01=PARENT/GUARDIAN 02=SPOUSE/PARTNER 03=FRIEND 04=JOB COACH 05=EMPLOYER/SUPERVISOR 06=OTHER RELATIVE 07=CASE WORKER/COUNSELOR/PROGRAM STAFF 08=MEDICAL PROVIDER 09=OTHER (SPECIFY: <OPEN>)	10=OTHER NON-RELATIVE
B45	Who else {do you/does NAME} discuss {your/his/her} work goals with?	01=PARENT/GUARDIAN 02=SPOUSE/PARTNER 03=FRIEND 04=JOB COACH 05=EMPLOYER/SUPERVISOR 06=OTHER RELATIVE 07=CASE WORKER/COUNSELOR/PROGRAM STAFF 08=MEDICAL PROVIDER 09=OTHER (SPECIFY: <OPEN>)	10=OTHER NON-RELATIVE
C23	What kind of special equipment {do you/does NAME} use?	01=BRACE 02=CANE/CRUTCHES/WALKER 03=WHEELCHAIR 04=MODIFIED COMPUTER HARDWARE 05=MODIFIED COMPUTER SOFTWARE 06=OTHER (SPECIFY: <OPEN>)	07=HEARING AIDS 08=GLASSES
C35	Are there any changes in {your/NAME's} {main/current} job or workplace related to {your/his/her} mental or physical condition that {you need/he/she needs}, but that have <u>not</u> been made? (IF YES) What are those changes?	<OPEN>	a=Need special equipment b=Need changes in work schedule c=Need changes to the tasks d=Need changes to environment e=Need co-workers to assist

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
D23	Why did {you/NAME} stop working at this job?	<p>LAYOFF, FIRED, RETIRED            01=LAYOFF, PLANT CLOSED            02=FIRED            03=RETIRED/OLD AGE            04=JOB WAS TEMPORARY AND ENDED</p> <p>PROBLEMS WITH JOB            05=DID NOT LIKE SUPERVISOR OR CO-WORKERS            06=DID NOT LIKE JOB DUTIES            07=DID NOT LIKE JOB EARNINGS            08=DID NOT LIKE BENEFITS            09=DID NOT LIKE OPPORTUNITIES FOR ADVANCEMENT            10=DID NOT LIKE LOCATION            11=DID NOT GET ACCOMMODATIONS THAT WERE NEEDED</p> <p>OTHER PROBLEMS            12=TRANSPORTATION PROBLEMS            13=DECIDED TO GO TO SCHOOL            14=CHILD CARE RESPONSIBILITIES (PREGNANT)            15=OTHER FAMILY OR PERSONAL REASONS</p> <p>DISABILITY            16=DISABILITY GOT WORSE            17=BECAME DISABLED            18=OTHER (SPECIFY: &lt;OPEN&gt;)</p>	<p>19=MOVED TO ANOTHER AREA            20=FOUND ANOTHER JOB            21=LOSS OR POTENTIAL LOSS OF BENEFITS            22=WORK SCHEDULE</p>
D25b	Did you work fewer hours or earn less money than you could have because {you/he/she} you...	<p>a={Were/Was} taking care of somebody else            b={Were/Was} enrolled in school or a training program            c=Wanted to keep Medicare or Medicaid coverage            d=Wanted to keep cash benefits such as disability or workers compensation            e=Just didn't want to work more            f=Are there any reasons I didn't mention why {you/NAME} might have chosen to work or earn less than {you/he/she} could have during 2004 (SPECIFY: &lt;OPEN&gt;)</p>	g=Had medical problems/complications

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
D26	In 2004, do you think {you/NAME} could have worked or earned more if {you/he/she} had:	a=Help caring for {your/his/her} children or others in the household b=Help with {your/his/her} own personal care c=Reliable transportation to and from work d=Better job skills e=A job with a flexible work schedule f=Help with finding and getting a better job g=Any special equipment or medical devices (SPECIFY: <OPEN>) h=Is there anything else that I didn't mention that would have helped {you/NAME} to work or earn more during 2004 (SPECIFY: <OPEN>)	i=Better health/treatment
E43	Why {are you/is NAME} no longer receiving services from {EN IN 2004 FROM E39}?	<OPEN>	01=Never received any info 02=Found a job 03=Cannot work for health reasons 04=Other reason related to personal circumstance 05=Other reason related to EN 06=Other
F14	Why didn't {you/NAME or his/her representative} try to use {your/NAME's} Ticket with the State VR agency in 2004?	<OPEN>	01=Agency didn't help 02=Did not know could 03=Was not healthy enough 04=Other

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
F29	After receiving information about the Employment Networks in {your/NAME's} area including the State VR agency or {STATE NAME FOR VR}, why didn't {you/NAME or his/her representative} contact any of them?	01=PHYSICAL/MENTAL CONDITION 02=CHANGED MIND 03=FAMILY RESPONSIBILITIES 04=FAMILY WOULD NOT SUPPORT 05=COULD NOT GET RELIABLE TRANSPORTATION 06=ECONOMIC CONDITIONS CHANGED 07=FEARED SERVICES WOULD ENDANGER BENEFITS 08=INFORMATION TOO CONFUSING 09=EMPLOYMENT NETWORK {NAME} WANTED WAS NOT PARTICIPATING 10=ENS TOO FAR AWAY 11=COULD NOT GET IN CONTACT WITH ENS 12=NO ENS PROVIDED SERVICES {NAME} NEEDS 13=NO ENS SERVE MY KIND OF DISABILITY 14=OTHER (SPECIFY: <OPEN>)	15=GOT A JOB OR IN SCHOOL
F31	What are the main reasons {you did/NAME did} not try to participate in the Ticket to Work program in 2004?	<OPEN>	01=Health Reasons 02=H had a job/in school 03=Did not know about program 04=Did not want to/did not try 05=Other 06=Cannot work, reason unspecified
G7	Thinking about {PROVIDER FROM G2}, was this place:	01=A state agency 02=A private business 03= Some other type of place (SPECIFY: <OPEN>)	04=School
G9	Was this place a:	01=A vocational rehabilitation agency 02=A welfare agency 03=A mental health agency 04=Some other state agency (SPECIFY: <OPEN>) 05=Some other type of place (SPECIFY: <OPEN>)	06=Workforce center/ employment office
G13	Thinking about {PROVIDER FROM G11}, was this place:	01=A state agency 02=A private business 03= Some other type of place (SPECIFY: <OPEN>)	04=School or college

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
G18	Thinking about {NEW PROVIDER FROM G16}, was this place:	01=A clinic, 02=A hospital 03=A doctor's office, or 04=Some other type of place (SPECIFY: <OPEN>)	05=A school or college 06=A nursing home/group home 07=A government agency 08=In home care 09=A medical equipment store 10=A rehabilitation/counseling center 11=Physical therapy center
G22	Thinking about {NEW PROVIDER FROM G20}, was this place:	01=A mental health agency 02=A clinic 03=A hospital, 04=A doctor's office, or 05=Some other type of place (SPECIFY: <OPEN>)	06=Residential treatment program/facility 07=Rehab center/counseling center/day program
G45	In 2004, who paid for the services {you/NAME} received from {PROVIDER FROM G32 DE-DUPLICATED LIST IF USED IN 2004}?	01={NAME} 02=PROVIDER FROM G32 DE-DUPLICATED LIST IF USED IN 2004 03=NO ONE 04=FAMILY 05=EMPLOYMENT NETWORK 06=MEDICARE 07=MEDICAID 08=EMPLOYER 09=NON-PROFIT ORGANIZATION SERVING PEOPLE WITH DISABILITIES 10=WORKER'S COMPENSATION 11=DISABILITY INSURANCE 12=OTHER (SPECIFY: <OPEN>)	14=SCHOOL/FINANCIAL AID/GRANT 15=STATE AGENCY/COUNTY/GOVERNMENT
G53	Thinking only about the services {you/NAME} used in 2004, what are the main reasons {you/he/she} decided to use these services?	01=TO FIND A JOB/GET A BETTER JOB 02=TO INCREASE INCOME 03=TO IMPROVE HEALTH 04=TO IMPROVE ABILITY TO DO DAILY ACTIVITIES 05=TO AVOID A CONTINUING DISABILITY REVIEW 06=SOMEONE PRESSURED {NAME} TO PARTICIPATE 07=WANTED ACCESS TO A SPECIFIC PROGRAM/SERVICE/RESOURCE 08=OTHER (SPECIFY: <OPEN>)	09=TO BE MORE INDEPENDENT

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
G55	Who pressured {you/NAME} to use these services?	01=PARENT/GUARDIAN 02=SPOUSE/PARTNER 03=OTHER FAMILY MEMBER 04=FRIEND/CO-WORKER 05=EMPLOYER/SUPERVISOR 06=STAFF OF EMPLOYMENT NETWORK 07=VOCATIONAL REHABILITATION CASE MANAGER 08=JOB COACH 09=SSA LETTER 10=SSA STAFF 11=BENEFIT SPECIALIST/BPAO 12=OTHER (SPECIFY: <OPEN>)	13=HEALTH CARE PROVIDER 14=COURT/POLICE
G56	How did {your/NAME's} (PERSONS(S) FROM G55) pressure :you/NAME" to use these services	01=SAID {NAME} WOULD LOSE DISABILITY AND/OR HEALTH INSURANCE BENEFITS 02=WOULD NOT TAKE "NO" FOR AN ANSWER 03=THREATENED TO WITHHOLD SERVICES 04=THREATENED TO TAKE AWAY OTHER SUPPORT 05=OTHER (SPECIFY: <OPEN>)	06=THREATENED HOSPITALIZATION/JAIL
G61	Why {were you/was NAME} unable to get these services?	<OPEN>	01=Not eligible/request refused 02=Lack of information 03=Could not afford/insurance did not cover 04=Did not try 05=Too difficult/too confusing 06=Problems with the service or agency 07=Other
H3	Why did {you/NAME} decide to participate in the Ticket to Work program?	<OPEN>	01=Wanted to get a job/ more money/benefits 02=Wanted to feel more independent 03=Other
H23	Why didn't {you/NAME or his/her representative} try to use {your/NAME's} Ticket with the State VR agency in 2004?	<OPEN>	01=Signed up with other agency 02=Already receiving services 03=Other

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
H29	Why didn't {you/NAME or (his/her) representative} try to use {your/NAME's} Ticket with {any of} the other Employment Network(s) {you/NAME or (his/her) representative} contacted in 2004?	<OPEN>	01=Location 02=Other
H31	Why didn't {any of} the other { Employment Network(s) {you/NAME} tried to use {your/his/her} Ticket with accept {your/NAME's} Ticket in 2004?	01=NOT TAKING TICKETS WHEN CONTACTED 02=DID NOT OFFER SERVICES {NAME} NEEDED 03=DID NOT SERVE PEOPLE WITH {NAME'S} DISABILITY/NEEDS 04={NAME} NOT WILLING/ABLE TO WORK FULL-TIME/ENOUGH HOURS 05={NAME} NOT WILLING TO GO OFF OF DISABILITY BENEFITS 06= OTHER (SPECIFY: <OPEN>)	07=TROUBLE CONTACTING EN
H33	What information did {you/NAME} need but didn't get?	<OPEN>	01=How/where to use the ticket 02=Services provided 03=Other
H35	Why did {you/NAME or (his/her) representative} choose {{LONGEST} EMPLOYMENT NETWORK IN 2004}?	01=STAFF WERE MOST RESPONSIVE/COURTEOUS/KNOWLEDGEABLE 02=MOST WILLING TO PROVIDE THE SERVICES {NAME} WANTED 03=SERVED PEOPLE WITH {NAME'S} DISABILITY/NEEDS 04=WAIT FOR SERVICES WAS NOT TOO LONG 05=ONLY PROVIDER NEARBY/CLOSEST PROVIDER 06=ONLY PROVIDER WILLING TO ACCEPT TICKET 07=OTHER (SPECIFY: <OPEN>)	08=KNEW ABOUT THEM OR REFERRED TO THEM 09=FINANCIAL COMPENSATION
H38	What problems did {you/NAME} have during 2004 (with the services you received from EN)?	<OPEN>	01=Trouble making/keeping contact 02=Problems receiving services 03=Problems with counselor 04=Other

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
H48	What was the problem about?	<OPEN>	01=Problems making/keeping contact 02=Problems receiving services 03=Other
I20	What devices, equipment, or other types of assistance {do you/does NAME} use? Anything else?	01=TELESCOPIC LENSES 02=ADAPTED COMPUTER EQUIPMENT 03=BRAILLE 04=READERS 05=GUIDE DOG 06=WHITE CANE 07=OTHER SEEING ASSISTANCE (SPECIFY: <OPEN>)	08=MAGNIFYING GLASS
I32	What devices, equipment, or other types of assistance {do you/does NAME} use? Anything else?	01=BRACES, CRUTCHES, CANE, OR WALKER 02=WHEELCHAIR OR SCOOTER 03=PROSTHETIC DEVICE 04=SPECIAL CHAIR (NOT WHEELCHAIR) 05=VEHICLE HAND CONTROLS 06=LIFT (HOME OR VEHICLE) 07=OTHER MOBILITY ASSISTANCE (SPECIFY: <OPEN>)	09=SPECIAL SHOES OR SHOE INSERTS
J11	Now, I'd like you to think back to 2004. In 2004, what kinds of health coverage did {you/NAME} have?	01=MEDICAID/{STATMED} 02=MEDICARE 03=CHAMPUS/CHAMP-VA, TRICARE, VA, OTHER MILITARY 04=INDIAN HEALTH SERVICE 05=MEDI-GAP 06=STATE PROGRAM 07=PRIVATE INSURANCE THROUGH OWN EMPLOYER 08=PRIVATE INSURANCE THROUGH SPOUSE/PARTNER/PARENT 09=PRIVATE INSURANCE PAID BY SELF/FAMILY 10=OTHER PLAN (SPECIFY: <OPEN>)	11=PRIVATE INSURANCE, NOT SPECIFIED WHO THROUGH
K14	What other assistance did {you/NAME} receive <u>last month</u> ?	<OPEN>	01=Housing Assistance 02=Energy Assistance 03=Food assistance 04=Other

APPENDIX B (continued)

Item	Question Text	Questionnaire Response Options	Categories Added During Coding
M8	How is that person related to {you/NAME}, if at all?	01={NAME'S} SPOUSE 02={NAME'S} MOTHER 03={NAME'S} FATHER 04={NAME'S} CHILD 05=GRANDPARENT OF {NAME} 06=BROTHER/SISTER (NATURAL/STEP) OF {NAME} 07=AUNT/UNCLE OF {NAME} 08=OTHER RELATIVE OF {NAME} (SPECIFY: <OPEN>) 09=NOT RELATED (SPECIFY: <OPEN>) 10=STAFF AT RESIDENCE	11=FRIEND 12=CASEWORKER/CAREGIVER/ PAYEE 13=GIRLFRIEND/BOYFRIEND/ PARTNER 14=GUARDIAN/FOSTER PARENT/STEP PARENT 15=IN-LAW
M10	How is that person related to {you/NAME}, if at all?	01={NAME'S} SPOUSE 02={NAME'S} MOTHER 03={NAME'S} FATHER 04={NAME'S} CHILD 05=GRANDPARENT OF {NAME} 06=BROTHER/SISTER (NATURAL/STEP) OF {NAME} 07=AUNT/UNCLE OF {NAME} 08=OTHER RELATIVE OF {NAME} (SPECIFY: <OPEN>) 09=NOT RELATED (SPECIFY: <OPEN>) 10=STAFF AT RESIDENCE	11=FRIEND 12=CASEWORKER/CAREGIVER/ PAYEE 13=GIRLFRIEND/BOYFRIEND/ PARTNER 14=GUARDIAN/FOSTER PARENT/STEP PARENT 15=IN-LAW
M13	How is the assistant/proxy related to (NAME)?	01={NAME'S} SPOUSE 02={NAME'S} MOTHER 03={NAME'S} FATHER 04={NAME'S} CHILD 05=GRANDPARENT OF {NAME} 06=BROTHER/SISTER (NATURAL/STEP) OF {NAME} 07=AUNT/UNCLE OF {NAME} 08=OTHER RELATIVE OF {NAME} (SPECIFY: <OPEN>) 09=NOT RELATED (SPECIFY: <OPEN>) 10=STAFF AT RESIDENCE	11=FRIEND 12=CASEWORKER/CAREGIVER/ PAYEE 13=GIRLFRIEND/BOYFRIEND/ PARTNER 14=GUARDIAN/FOSTER PARENT/STEP PARENT 15=IN-LAW

**APPENDIX C**

**SOC MAJOR AND MINOR OCCUPATION CLASSIFICATIONS**

*PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING*

## SOC MAJOR AND MINOR OCCUPATION CLASSIFICATIONS

Code	Occupation
	<b>Management</b>
111	Top Executives
112	Advertising, Marketing, PR, Sales
113	Operations Specialist Managers
119	Other Management Occupations
	<b>Business /Financial Operations</b>
131	Business Operations Specialist
132	Financial Specialist
	<b>Computer and Mathematical Science</b>
151	Computer Specialist
152	Mathematical Science Occupations
	<b>Architecture and Engineering</b>
171	Architects, Surveyors and Cartographers
172	Engineers
173	Drafters, Engineering and Mapping Technicians
	<b>Life, Physical and Social Science</b>
191	Life Scientists
192	Physical Scientists
193	Social Scientists and Related Workers
194	Life, Physical and Social Science Technicians
	<b>Community and Social Services</b>
211	Counselors, Social Workers and Other Community and Social Service Specialists
212	Religious Workers
	<b>Legal</b>
231	Lawyers, Judges and Related Workers
232	Legal Support Workers
	<b>Education, Training and Library</b>
251	Postsecondary Teachers
252	Primary, Secondary and Special Education School Teachers
253	Other Teachers and Instructors
254	Librarians, Curators and Archivists
259	Other Education, Training and Library Occupations
	<b>Arts, Design, Entertainment, Sports and Media</b>
271	Art and Design Workers
272	Entertainers and Performers, Sports and Related Workers
273	Media and Communication Workers
274	Media and Communication Equipment Workers
	<b>Healthcare Practitioner and Technical Occupations</b>
291	Health Diagnosing and Treating Practitioners
292	Health Technologists and Technicians
299	Other Healthcare Practitioner and Technical Occupations

Code	Occupation
<b>Healthcare Support</b>	
311	Nursing, Psychiatric and Home Health Aides
312	Occupational and Physical Therapist Assistants and Aides
319	Other Healthcare Support Occupations
<b>Protective Service</b>	
331	Supervisors, Protective Service Workers
332	Firefighting and Prevention Workers
333	Law Enforcement Workers
339	Other Protective Service Workers
<b>Food Preparation and Serving Related</b>	
351	Supervisors, Food Preparation and Food Serving Workers
352	Cooks and Food Preparation Workers
353	Food and Beverage Serving Workers
359	Other Food Preparation and Serving Related Workers
<b>Building and Grounds Cleaning and Maintenance</b>	
371	Supervisors, Building and Grounds Cleaning and Maintenance Workers
372	Building Cleaning and Pest Control Workers
373	Grounds Maintenance Workers
<b>Personal Care and Service Occupations</b>	
391	Supervisors, Personal Care and Service Workers
392	Animal Care and Service Workers
393	Entertainment Attendants and Related Workers
394	Funeral Service Workers
395	Personal Appearance Workers
396	Transportation, Tourism, and Lodging Attendants
399	Other Personal Care and Service Workers
<b>Sales and Related Occupations</b>	
411	Supervisors, Sales Workers
412	Retail Sales Workers
413	Sales Representative, Services
414	Sales Representative, Wholesale and Manufacturing
419	Other Sales and Related Workers
<b>Office and Administrative Support</b>	
431	Supervisors, Office and Administrative Support Workers
432	Communications Equipment Operators
433	Financial Clerks
434	Information and Record Clerks
435	Material Recording, Scheduling Dispatching, and Distribution Workers
436	Secretaries and Administrative Assistants
439	Other Office and Administrative Support Workers
<b>Farming, Fishing and Forestry Workers</b>	
451	Supervisors, Farming, Fishing and Forestry Workers
452	Agricultural Workers
453	Fishing and Hunting Workers
454	Forest, Conservation and Logging Workers

Code	Occupation
<b>Construction and Extraction Occupations</b>	
471	Supervisors, Construction and Extraction Workers
472	Construction Trade Workers
473	Helpers, Construction Trades
474	Other Construction and Related Workers
475	Extraction Workers
<b>Installation, Maintenance and Repair Occupations</b>	
491	Supervisors, Installation, Maintenance and Repair Workers
492	Electrical and Electronic Equipment Mechanics, Installers and Repairers
493	Vehicle and Mobile Equipment Mechanics, Installers and Repairers
494	Other Installation, Maintenance and Repair Occupations
<b>Production Occupations</b>	
511	Supervisors, Production Workers
512	Assemblers and Fabricators
513	Food Processing Workers
514	Metal Workers and Plastic Workers
515	Printing Workers
516	Textile, Apparel, and Furnishing Workers
517	Woodworkers
518	Plant and System Operators
519	Other Production Occupations
<b>Transportation and Material Moving Occupations</b>	
531	Supervisors, Transportation and Material Moving Workers
532	Air Transportation Workers
533	Motor Vehicle Operators
534	Rail Transportation Workers
535	Water Transportation Workers
536	Other Transportation Workers
537	Material Moving Workers
<b>Military Specific Occupations</b>	
551	Military Officer and Tactical Operations Leaders/Managers
552	First-Line Enlisted Military Supervisors/Managers
553	Military Enlisted Tactical Operations and Air/Weapons Specialists and Crew Members

*PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING*

**APPENDIX D**  
**NAICS INDUSTRY CODES**

***PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING***

## NAICS INDUSTRY CODES

Code	Description
11	<b>Agriculture, Forestry Fishing and Hunting</b>
111	Crop Production
112	Animal Production
113	Forestry and Logging
114	Fishing, Hunting and Trapping
115	Support Activities for Agriculture and Forestry
21	<b>Mining</b>
211	Oil and Gas Extraction
212	Mining (except Oil and Gas)
213	Support Activities for Mining
22	<b>Utilities</b>
221	Utilities
23	<b>Construction</b>
236	Construction of Buildings
237	Heavy and Civil Engineering Construction
238	Specialty Trade Contractors
31-33	<b>Manufacturing</b>
311	Food Manufacturing
312	Beverage and Tobacco Product Manufacturing
313	Textile Mills
314	Textile Product Mills
315	Apparel Manufacturing
316	Leather and Allied Product Manufacturing
321	Wood Product Manufacturing
322	Paper Manufacturing
323	Printing and Related Support Activities
324	Petroleum and Coal Products Manufacturing
325	Chemical Manufacturing
326	Plastics and Rubber Products Manufacturing
327	Nonmetallic Mineral Product Manufacturing
331	Primary Metal Manufacturing
332	Fabricated Metal Products Manufacturing
333	Machinery Manufacturing
334	Computer and Electronic Product Manufacturing
335	Electrical Equipment, Appliance and Component Manufacturing
336	Transportation Equipment Manufacturing
337	Furniture and Related Product Manufacturing
339	Miscellaneous Manufacturing

Code	Description
42	<b>Wholesale Trade</b>
423	Merchant Wholesalers, Durable Goods
424	Merchant Wholesalers, Nondurable Goods
425	Wholesale Electronic Markets and Agents and Brokers
44-45	<b>Retail Trade</b>
442	Furniture and Home Furnishings Stores
443	Electronics and Appliance Stores
444	Building Material and Garden Equipment and Supplies Dealers
445	Food and Beverage Stores
446	Health and Personal Care Stores
447	Gasoline Stations
448	Clothing and Clothing Accessories Stores
451	Sporting Goods, Hobby, Book, and Music Stores
452	General Merchandise Stores
453	Miscellaneous Store Retailers
454	Nonstore Retailers
48-49	<b>Transportation and Warehousing</b>
481	Air Transportation
482	Rail Transportation
483	Water Transportation
484	Truck Transportation
485	Transit and Ground Passenger Transportation
486	Pipeline Transportation
487	Scenic and Sightseeing Transportation
488	Support Activities for Transportation
491	Postal Service
492	Couriers and Messengers
493	Warehousing and Storage
51	<b>Information</b>
511	Publishing Industries (except Internet)
512	Motion Picture and Sound Recording Industries
515	Broadcasting (except Internet)
516	Internet Publishing and Broadcasting
517	Telecommunications
518	Internet Service Providers, Web Search Portals, and Data Processing Services
519	Other Information Services
52	<b>Finance and Insurance</b>
522	Credit Intermediation and Related Activities
523	Securities, Commodity Contracts, and Other Financial Investments and Related Activities
524	Insurance Carriers and Related Activities
525	Funds, Trusts, and Other Financial Vehicles

Code	Description
53	<b>Real Estate and Rental and Leasing</b>
531	Real Estate
532	Rental and Leasing Services
533	Lessors of Nonfinancial Intangible Assets (except Copyrighted Works)
54	<b>Professional, Scientific, and Technical Services</b>
55	<b>Management of Companies and Enterprises</b>
551	Management of Companies and Enterprises
56	<b>Administrative and Supportive Waste Management and Remediation Services</b>
561	Administrative and Support Services
562	Waste Management and Remediation Services
61	<b>Educational Services</b>
611	Educational Services
62	<b>Health Care and Social Assistance</b>
621	Ambulatory Health Care Services
622	Hospitals
623	Nursing and Residential Care Facilities
624	Social Assistance
71	<b>Arts, Entertainment, and Recreation</b>
711	Performing Arts Companies
712	Museums, Historical Sites, and Similar Institutions
713	Amusement, Gambling, and Recreation Industries
72	<b>Accommodation and Food Services</b>
721	Accommodation
722	Food Services and Drinking Places
81	<b>Other Services (except Public Administration)</b>
811	Repair and Maintenance
812	Personal and Laundry Services
813	Religious, Grantmaking, Civic, Professional, and Similar Organizations
814	Private Households
92	<b>Public Administration</b>
921	Executive, Legislative, and Other General Government Support
922	Justice, Public Order, and Safety Activities
923	Administration of Human Resources Programs
924	Administration of Environmental Quality
925	Administration of Housing Programs, Urban Planning, and Community Development
926	Administration of Economic Programs
927	Space Research and Technology
928	National Security and International Affairs

***PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING***

**APPENDIX E**

**DESCRIPTION OF CONSTRUCTED VARIABLES**

*PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING*

DESCRIPTION OF CONSTRUCTED VARIABLES

Variable Name	Description
<b>Sampling Variables and Administrative Variables Used in Survey Administration</b>	
OrgSampInfo_Age	Age of sample member at time of sample selection. Based on date of birth from SSA administrative records.
OrgSampInfo_Bstatus	Indicates whether sample member receives SSI, SSDI, or both SSI and SSDI. From SSA administrative records.
OrgSampInfo_DOB	Sample member date of birth from SAS administrative records.
OrgSampInfo_Phase	Ticket to Work roll-out phase state from SSA administrative records. Note that for the Ticket Participant sample, the target population is comprised of individuals who were participants in the Phase 1 states (based on address at time of roll-out).
OrgSampInfo_PSU	Sampling PSU. For beneficiaries, based on zipcode as of June of the year they were sampled. For participants, sample PSU is based on the zipcode at the time the ticket was assigned.
OrgSampInfo_Release	Sample release number.
OrgSampInfo_SDate	Date sample frame pulled.
OrgSampInfo_SSIage	Age began receiving SSI benefits. From SSA administrative records.
OrgSampInfo_SSIdate	Date began receiving SSI benefits. From SSA administrative records.
OrgSampInfo_Tstatus	Indicates whether sample member was a Ticket to Work Participant at the time of sample selection.
A_PSU	Analytical PSU for variance estimation using SUDAAN.
A_Strata	Analytical strata for Beneficiary and Participant samples for variance estimation using SUDAAN.
C_Cohort	Age cohort sampling strata for Beneficiary sample. Based on date of birth from SSA administrative records.
C_PaymentType	Sampling strata variable for Ticket Participant sample. Indicates Employment Network payment type. From SSA administrative records.
<b>Survey Administration Variables</b>	
C_Rtype	Indicates whether interview conducted by sample person or proxy. Based on M11.
C_Resptype	Indicates whether the sample person or proxy required assistance from someone else to complete the interview. Based on M12.
C_IntMode	Indicates whether interview conducted via CATI or CAPI.
C_IntAge	Sample member age at interview. Based on date of interview minus self-reported date of birth at A68 or A69.
C_IntDay	Interview day.
C_IntMnth	Interview month.

Variable Name	Description
C_IntYear	Interview year.
Final	Final disposition code
Flagparti	For use with the combined Beneficiary and Ticket Participant sample weight. Identifies Ticket participants who also appear in the Beneficiary sample.
E2skip	Flags cases that were inappropriately skipped items E3-E10.
E12skip	Flags cases that were inappropriately skipped items E12-E13.
E15skip	Flags cases that were inappropriately skipped items E15-E18.
E24skip	Flags cases that were inappropriately skipped item E21.
<b>Weights</b>	
Wgt1_Benefinl	Weights created for beneficiary sample analyses.
Wgt1_BenefinE12	Weights created for analyzing E12 to E13 with beneficiary sample. Accounts for cases that inappropriately skipped these items (E12skip=1).
Wgt1_BenefinE15	Weights created for analyzing E15 to E18 with beneficiary sample. Accounts for cases that inappropriately skipped these items (E15 skip=1).
Wgt1_BenefinE3	Weights created for analyzing E3 to E10 with beneficiary sample. Accounts for cases that inappropriately skipped these items (E3 skip=1).
Wgt1_Combfinl	Weights created for combined beneficiary and participant sample analyses.
Wgt1_CombfinE12	Weights created for analyzing E12 to E13 with combined sample. Accounts for cases that inappropriately skipped these items (E12skip=1).
Wgt1_CombfinE15	Weights created for analyzing E15 to E18 with combined sample. Accounts for cases that inappropriately skipped these items (E15 skip=1).
Wgt1_CombfinE3	Weights created for analyzing E3 to E10 with combined sample. Accounts for cases that inappropriately skipped these items (E3 skip=1).
Wgt1_Partifinl	Weights created for participant sample analyses.
Wgt1_PartifinE12	Weights created for analyzing E12 to E13 with participant sample. Accounts for cases that inappropriately skipped these items (E12 skip=1).
Wgt1_PartifinE15	Weights created for analyzing E15 to E18 with participant sample. Accounts for cases that inappropriately skipped these items (E15 skip=1).
Wgt1_PartifinE3	Weight created for analyzing E3 to E10 with participant sample. Accounts for cases that inappropriately skipped these items (E2skip =1).
<b>Section B Variables: Disability and Current Work Status</b>	
C_DisAge	Indicates age the sample person became disabled. Based on B18_age and B18_yr.
C_AdultChild_Onset	Indicates whether onset of disability was prior to age 18 or at age 18 and older. Based on B19 and C_Disage.

Variable Name	Description
C_WrkdWhenLim	Indicates whether sample person was working at time became disabled. Based on B22 and C_AdultChildOnset.
C_EvrWorked	Indicates whether sample person ever worked at time of interview. Based on B36, B22, B24, and B30.
C_MainConICD9_1-_9	ICD-9 code assigned to verbatim response to B2 (main reason limited). Note: when an ICD-9 code could not be assigned, a two digit code corresponding to the ICD-9 chapter headings was assigned.
C_MainConDiagGrp_1-_9	ICD-9 diagnosis categories based on verbatim at B2 (physical or mental condition that is main reason limited).
C_MainConColDiagGrp_1-_9	Collapsed ICD-9 diagnosis categories based on verbatim at B2 (physical or mental condition that is main reason limited).
C_MainConBodyGroup_1-_9	ICD-9 body group categories based on verbatim at B2 (main reason limited).
C_SeconICD9_1-_9	ICD-9 code assigned to verbatim at B4 (other physical or mental conditions that limit work or other daily activities can do). Note: when and ICD-9 code could not be assigned, a two digit code corresponding to an ICD-9 chapter heading was assigned.
C_SeconDiagGrp_1-_9	ICD-9 diagnosis categories based on verbatim at B4 (other physical and mental conditions that limit work or daily activities).
C_SeconColDiagGrp_1-_9	Collapsed ICD-9 diagnosis categories based on verbatim at B4 (other physical and mental conditions that limit work or daily activities).
C_SeconBodyGroup_1-_9	ICD-9 body group categories based on verbatim at B4 (other physical or mental conditions that limit work or daily activities).
C_ReasBecEligICD9	ICD-9 code assigned to response indicating main reason eligible for disability benefits. Taken from B6, B12, or B15. Note: when and ICD-9 code could not be assigned, a two digit code corresponding to an ICD-9 chapter heading was assigned.
C_ReasBecEligDiagGrp	ICD-9 diagnosis categories for main reason eligible for disability benefits. Taken from B6, B12, or B15.
C_ReasBecEligColDiagGrp	Collapsed ICD-9 diagnosis categories for main reason eligible for disability benefits. Taken from B6, B12, or B15.
C_ReasBecEligBodyGroup	ICD-9 body group categories for main reason eligible for disability benefits. Taken from B6, B12, or B15.

### Section C Variables: Current Employment

C_MainCurJobHrPay	Hourly rate at current main job (pre-tax). Based on C10, C11, C12amt, and C12hop.
C_MainCurJobMnthPay	Monthly pay rate at current main job (pre-tax). Based on C10, C11, C12amt, and C12hop.
C_MainCurJobMnthPayTH	Monthly take home pay from current main job. Based on C10, C11, C13amt, and C13hop.
C_MainCurJobSOC	SOC code assigned to verbatim from C2 (current occupation for main job).
C_MainCurJobNAICS	NAICS code assigned to verbatim at C3 (current industry for main job).

Variable Name	Description
C_MainCurJobRepSSA	Number of months before current job reported to SSA. Based on C5b, C5month, and C5bweek.
C_MnthsMainCurJob	Months employed at current main job. Based on year of interview, C4mth, and C4yr. Computed for each job listed.
C_CurJob2HrPay	Hourly pay at current second job
C_CurJob2MnthPay	Monthly pre-tax pay at current second job.
C_CurJob2MnthPayTH	Monthly take home pay at current second job.
C_CurJob2SOC	SOC code assigned to verbatim from C2 (current occupation for second job).
C_CurJob2NAICS	NAICS code assigned to verbatim at C3 (current industry for second job).
C_CurJob2RepSSA	Number of months before current second job reported to SSA. Based on C5b, C5month, and C5bweek.
C_MnthsCurJob2	Months employed at current second job. Based on year of interview, C4mth, and C4yr.
C_CurJob3HrPay	Hourly pay at current third job
C_CurJob3MnthPay	Monthly pre-tax pay at current third job.
C_CurJob3MnthPayTH	Monthly take home pay at current third job.
C_CurJob3SOC	SOC code assigned to verbatim from C2 (current occupation for third job).
C_CurJob3NAICS	NAICS code assigned to verbatim at C3 (current industry for third job).
C_CurJob3RepSSA	Number of months before current third job reported to SSA. Based on C5b, C5month, and C5bweek.
C_MnthsCurJob3	Months employed at current third job. Based on year of interview, C4mth, and C4yr.
C_CurJob4HrPay	Hourly pay at current fourth job
C_CurJob4MnthPay	Monthly pre-tax pay at current fourth job.
C_CurJob4MnthPayTH	Monthly take home pay at current fourth job.
C_CurJob4SOC	SOC code assigned to verbatim from C2 (current occupation for fourth job).
C_CurJob4NAICS	NAICS code assigned to verbatim at C3 (current industry for fourth job).
C_CurJob4RepSSA	Number of months before current fourth job reported to SSA. Based on C5b, C5month, and C5bweek.
C_MnthsCurJob4	Number of months before current fourth job reported to SSA. Based on C5b, C5month, and C5bweek.
C_TotCurMnthPay	Total current monthly pay from all jobs combined. Summary of currently monthly pay variables.
C_TotCurWkHrs	Total number of hours work per week on all current jobs combined. Based on summary of C8 for all jobs listed.

Variable Name	Description
C_TotCurHrMnth	Total number of hours worked per month on all jobs combined. Based on summary of C8 for all jobs listed.
C_CurMnthEquipExp	Total current monthly expenses for equipment that helps work. Based on amount self/family pays reported in C26amt and C26hop.
C_CurMnthPASExp	Total current monthly expenses for personal assistance services that help work. Based on amount self/family pays reported in C31amt and C31hop.
C_TotCurEquipPASExp	Total expenses for equipment and personal assistance services that help work combined. Based on summary of C_MnthEquipExp and C_MnthPASExp.
c_Totcurmntpay_low	Flags cases where total monthly pay is less than \$20 a month.
<b>Section D Variables: Jobs/Other Jobs During 2003</b>	
Main_Job_grid_num	Indicates which job is listed as 2003 main job.
C_job_from_SecC_1	Indicates which current job from section C has been copied over to job 1 in list of jobs held during 2003.
C_job_from_SecC_2	Indicates which current job from section C has been copied over to job 2 in list of jobs held during 2003.
C_job_from_SecC_3	Indicates which current job from section C has been copied over to job 3 in list of jobs held during 2003.
C_job_from_SecC_4	Indicates which current job from section C has been copied over to job 4 in list of jobs held during 2003.
C_MainJobHrPay2003	Hourly pay for main job in 2003 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_MainJobMnthPay2003	Monthly pay for main job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_MainJobMnthPayTH2003	Monthly take home pay for main job in 2003. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_MainJob2003SOC	SOC code assigned to verbatim at D4 (occupation at main job in 2003).
C_MainJob2003NAICS	NAICS code assigned to verbatim at D5 (industry for main job in 2003).
C_MnthsMain2003Job	Months employed at main job in 2003. Based on D6mth and D8mth. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job1HrPay2003	Hourly pay for first job in 2003 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job1MnthPay2003	Monthly pay for first job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job1MnthPayTH2003	Monthly take home pay for first job in 2003. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job12003NAICS	SOC code assigned to verbatim at D4 (occupation at first job in 2003).

Variable Name	Description
C_Job12003SOC	NAICS code assigned to verbatim at D5 (industry for first job in 2003).
C_MnthsJob12003	Months employed at first job in 2003. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job2HrPay2003	Hourly pay for second job in 2003 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job2MnthPay2003	Monthly pay for second job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job2MnthPayTH2003	Monthly take home pay for second job in 2003. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job22003NAICS	SOC code assigned to verbatim at D4 (occupation at second job in 2003).
C_Job22003SOC	NAICS code assigned to verbatim at D5 (industry for second job in 2003).
C_MnthsJob22003	Months employed at second job in 2003. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job3HrPay2003	Hourly pay for third job in 2003 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job3MnthPay2003	Monthly pay for third job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job3MnthPayTH2003	Monthly take home pay for third job in 2003. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job32003NAICS	SOC code assigned to verbatim at D4 (occupation at third job in 2003).
C_Job32003SOC	NAICS code assigned to verbatim at D5 (industry for third job in 2003).
C_MnthsJob32003	Months employed at third job in 2003. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job4HrPay2003	Hourly pay for fourth job in 2003 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job4MnthPay2003	Monthly pay for fourth job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job4MnthPayTH2003	Monthly take home pay for fourth job in 2003. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job42003NAICS	SOC code assigned to verbatim at D4 (occupation at fourth job in 2003).
C_Job42003SOC	NAICS code assigned to verbatim at D5 (industry for fourth job in 2003).
C_MnthsJob42003	Months employed at fourth job in 2003. Based on D6mth ad D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.

Variable Name	Description
C_Job5HrPay2003	Hourly pay for fifth job in 2003 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job5MnthPay2003	Monthly pay for fifth job in 200 (pre-tax). Based on D16, D18, D20amt, and D20hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job5MnthPayTH2003	Monthly take home pay for fifth job in 2003. Based on D16, D18, D21amt, and D21hop. Includes current jobs mentioned in section C that are not repeated in section D.
C_Job52003NAICS	SOC code assigned to verbatim at D4 (occupation at fifth job in 2003).
C_Job52003SOC	NAICS code assigned to verbatim at D5 (industry for fifth job in 2003).
C_MnthsJob52003	Months employed at fifth job in 2003. Based on D6mth and D8mnth. Includes current jobs mentioned in section C that are not repeated in section D.
C_Tot2003Pay	Total monthly pay for all jobs combined in 2003. Summary of monthly pay variables for each 2003 job listed. Includes current jobs mentioned in section C that are not repeated in section D.
C_TotMnths2003	Total months worked in 2003 at all jobs combined. Summary of months at 2003 job variables for each 2003 job listed. Includes current jobs mentioned in section C that are not repeated in section D.
C_UsWkHr2003	Usual weekly hours worked in 2003. Based on total hours worked in 2003 and number of weeks worked in 2003 for all jobs.
C_TotHrs2003	Total hours worked in 2003. Summary of hours*weeks worked for all jobs in 2003.

#### Section E Variables: Awareness of SSA Work Incentive Programs and Ticket to Work

C_AwareTTW	Indicator that sample person is aware of the Ticket to Work program. Based on E21, E22, and E25.
C_TicketInt	Indicates whether sample person had a ticket assigned with any Employment Network (EN) at the time of the interview. Coded "yes" if reported being currently signed up with any EN.
C_TotMnthsTTW	Total Months enrolled in Ticket to Work at the time of the interview. Sum of months enrolled with all ENs. Based on difference between stop date or interview date and dates first signed up with ENs reported in E39 or E46.
C_MnthsSinceUse	Number of months since started using ticket. Based on earliest start date for all ENs listed in E39, EN in E46, or E50mth and E50yr. Calculates difference in months between interview date and earliest start date.
C_MnthswEN	Total months signed up with current Employment Network. Based on difference between interview date and date first signed up with EN reported in E41 or E45.

#### Section F Variables: Ticket Non-Participants in 2003

C_InvolNonPartAtmpt	Indicates that sample person is not participating in TTW, but has tried to use ticket with an EN or SVRA. Based on F13, F15, F22, and F24.
---------------------	--

Variable Name	Description
C_InvolNonPartNoAttmpt	Indicates that sample person is not participating in TTW and has received information about TTW but has not tried to contact an EN or SVRA. Based on F4, F12, F20, and F29.
C_InvolNonPartAll	Summary of all involuntary non-participants, including those who have tried and those who have not tried to use their tickets. Based on C_InvolNonPartAttmpt and C_InvolNonPartNoAttmpt.
<b>Section G: Employment-Related Services and Supports Used in 2003</b>	
C_EvrUseSVR	Indicates that sample member has received employment services or job training from a State Vocational Rehabilitation Agency. Based on G9 and G14.
C_EvrUseWel	Indicates that sample person has received employment services or job training from a welfare agency. Based on G9 and G14.
C_EvrUseSMenH	Indicates that sample person has received employment services or job training from a state mental health agency. Based on G9 and G14.
C_EvrUseOStat	Indicates that sample person has received employment services or job training from another state agency. Based on G9 and G14.
C_EvrUsePriv	Indicates that sample person has received employment services or job training from a private business. Based on G7 and G13.
C_EvrUseOth	Indicates that sample person has received employment services or job training from another type of place. Based on G7 and G13.
C_EvrUseSchool	Indicates that sample person has received employment services or job training from a school or university (Note that this category was created based on responses to "some other type of place").
C_EvrUseUnemploy	Indicates that sample person has received employment services or job training from an unemployment agency (Note that this category was created based on responses to "some other type of place").
C_EvrUseClinic	Indicates that sample person has received medical or mental health services from a clinic, hospital, or doctor's office.
C_EvrUseRehab	Indicates that sample person received medical or mental health services from a rehabilitation center (Note that this category was created based on responses to "some other type of place").
C_EvrUseOthMed	Indicates that sample person received medical or mental health services from an other type of place.
C_EmpProvUnkwn	Indicates that provider of employment and job training services was unknown.
C_MedProvUnkwn	Indicates that provider of medical and mental health services was unknown.
C_EvrUsedServ	Indicates that sample member has used one or more of the services indicated at Gx, Gx0, Gx5, and Gx9.
C_EvrUseEmploy	Indicates that sample person has used employment services from any provider. Based on G1, G36_h, G36_I, or G36_k.
C_NumProvEvUsed	Number of providers sample person has used for employment-related services. Based on count of providers from de-duplicated list at G32.

Variable Name	Description
C_NumProv2003	Number of providers sample person used for employment related services in 2003. Based on count of de-duplicated providers from list at G32, G33, and G35.
C_UseSVR2003	Indicates that sample person received employment services or job training from an SVR in 2003.
C_UseWEL2003	Indicates that sample person received employment services or job training from a welfare agency in 2003.
C_UseSMenH2003	Indicates that sample person received employment services or job training from a state mental health agency in 2003.
C_UseOthSt2003	Indicates that sample person received employment services or job training from another state agency in 2003.
C_UsePriv2003	Indicates that sample person received employment services or job training from a private business in 2003.
C_UseOthNonSt2003	Indicates that sample member received employment or job training services from another non state provider in 2003.
C_UseSchool2003	Indicates that sample member received employment services or job training at a school in 2003.
C_UseUnemp2003	Indicates that sample member received employment services or job training from an unemployment agency in 2003.
C_UseClinic2003	Indicates that sample member received medical or mental health services at a clinic, hospital, or doctor's office in 2003.
C_UseRehab2003	Indicates that sample member received medical or mental health services at a rehabilitation center in 2003.
C_UseOthMed2003	Indicates that sample member received medical or mental health services from another type of place in 2003.
C_EmpUnkwn2003	Indicates that provider type was unknown for employment and job training services received in 2003.
C_MedUnkwn2003	Indicates that provider type was unknown for medical and mental health services received in 2003.
C_ServUse2003	Indicates that sample member used one or more services (G1, G10, G15, G19) in 2003.
C_PhyTh2003	Indicates that sample member received physical therapy from any provider in 2003.
C_OccTher2003	Indicates that sample member received occupational therapy from any provider in 2003.
C_SpchTher2003	Indicates that sample member received speech therapy from any provider in 2003.
C_MedProc2003	Indicates that the sample member received a medical procedure from any provider in 2003.
C_Equip2003	Indicates that sample member received special equipment or devices from any provider in 2003.

Variable Name	Description
C_Coun2003	Indicates that sample member received personal counseling or therapy from any provider in 2003.
C_GrpTh2003	Indicates that sample member received group therapy from any provider in 2003.
C_WrkAs2003	Indicates that sample member received a work or job assessment from any provider in 2003.
C_FindJob2003	Indicates that sample member received help finding a job from any provider in 2003.
C_JobTrn2003	Indicates that sample member received training to learn a new job or skill from any provider in 2003.
C_JobMod2003	Indicates that sample member received advice about modifying his/her job or work place from any provider in 2003.
C_JobCch2003	Indicates that sample member received on-the-job training, job coaching, or support services from any provider in 2003.
C_OtherServ2003	Indicates that sample member received any other services at G36 from any provider in 2003.
C_TotSerCost2003	Total annual out-of-pocket costs for 2003 services across all providers. Summary of amount paid by self/family per week*number of provider contacts for all providers received services from in 2003.
C_TotMoneyENS2003	Total money received from ENs in 2003 across all services (logical zero filled if G50=.L). Summary of amount provided by all ENs signed up with in 2003 (reported in G50_Tweek, G5x_weeks, G50T_months, G5x_months, or G50_T2003).
C_ProvType2003_1-_34	Type of provider received services from in 2003 (Prov n).
C_PhyTh2003_1-_34	Indicates received physical therapy from Provider n in 2003.
C_OccTh2003_1-_34	Indicates received occupational therapy from Provider n in 2003.
C_SpchTh2003_1-_34	Indicates received speech therapy from Provider n in 2003.
C_Med2003_1-_34	Indicates received medical procedure from Provider n in 2003.
C_Equip2003_1-_34	Indicates received special equipment or devices from Provider n in 2003. Based on G36.
C_Coun2003_1-_34	Indicates received personal counseling or therapy from Provider n in 2003. Based on G36.
C_GrpTh2003_1-_34	Indicates received group therapy from Provider n in 2003. Based on G36.
C_WrkAs2003_1-_34	Indicates received work assessment from Provider n in 2003.
C_FndJob2003_1-_34	Indicates received help finding a job from Provider n in 2003. Based on G36.
C_JobTrn2003_1-_34	Indicates received training to learn new job or skill from Provider n in 2003.
C_JobMd2003_1-_34	Indicates received advice about modifying job from Provider n. Based on G36.
C_JobCch2003_1-_34	Indicates received job training from Provider n in 2003. Based on G36.
C_Othr2003_1-_34	Indicates received other service from Provider n in 2003.

Variable Name	Description
C_DurProvVisit_1-_34	Duration in hours of visit with Provider n.
C_NumProvCont_1-_34	Number of contacts with Provider n.
C_ProvUse2003_1-_34	Rating of usefulness of services received from Provider n in 2003.
C_TickSerInd_1-_34	Indicator of whether services received from Provider n during 2003 were provided or arranged by an EN while the Ticket was assigned to the EN. Based on G42-G44.
C_TickSer2003	Indicator of whether services received from any provider during 2003 were provided or arranged by an EN while the Ticket was assigned to the EN. Based on G42-G44.
C_SelfFamPayServ_1-_34	Self or family paid for employment related services received from Provider n in 2003. Based on G45 and G46.
C_ProvPayServ_1-_34	Provider paid for employment related services received from Provider n in 2003. Based on G45.
C_NoonePayServ_1-_34	No one paid for employment related services received from Provider n in 2003. Based on G45.
C_InsurPayServ_1-_34	Health insurance paid for employment related services received from Provider n in 2003. Based on G45.
C_ENPayServ_1-_34	EN paid for employment related services received from Provider n in 2003 . Based on G45.
C_MedicarePayServ_1-_34	Medicare paid for employment related services received from Provider n in 2003. Based on G45.
C_MedicaidPayServ_1-_34	Medicaid paid for employment related services received from Provider n in 2003. Based on G45.
C_EmployPayServ_1-_34	Employer paid for employment related services received from Provider n in 2003. Based on G45.
C_NonprofPayServ_1-_34	Non-profit organization serving people with disabilities paid for employment related services received from Provider n in 2003. Based on G45.
C_WorkCompPayServ_1-_34	Workers' compensation paid for employment related services received from Provider n in 2003. Based on G45.
C_DisInsurPayServ_1-_34	Disability insurance paid for employment related services received from Provider n in 2003. Based on G45.
C_OtherPayServ_1-_34	Other paid for employment related services received from Provider n in 2003. Based on G45.
C_SchoolPayServ_1-_34	School paid for employment related services received from Provider n in 2003 (note that this category was created to categorized other/specify response to "other" paid for services). Based on G45.
C_AgencyPayServ_1-_34	Agency paid for employment related services received from Provider n in 2003 (note that this category was created to categorized other/specify response to "other" paid for services). Based on G45.
C_SerCost2003_1-_34	Annual out-of-pocket costs for 2003 services received from Provider n. Based on amount paid by self/family per week*number of provider contacts in 2003.

Variable Name	Description
C_ProvType2003_01_n	Indicates that a SVR was a provider in 2003 (where n=number of provider).
C_ProvType2003_02_n	Indicates that a Welfare agency was a provider in 2003.
C_ProvType2003_03_n	Indicates that a Mental Health agency was a provider in 2003.
C_ProvType2003_04_n	Indicates that a welfare agency, other non-state, or unemployment office was a provider in 2003.
C_ProvType2003_05_n	Indicates that a private business was a provider in 2003.
C_ProvType2003_06_n	Indicates that another non-state agency was a provider in 2003.
C_ProvType2003_07_n	Indicates that a school was a provider in 2003.
C_ProvType2003_08_n	Indicates that an employment office was a provider in 2003.
C_ProvType2003_09_n	Indicates that provider type was unknown for a provider of employment/training services in 2003.
C_ProvType2003_10_n	Indicates that a clinic/hospital/MD was a provider in 2003.
C_ProvType2003_11_n	Indicates that a rehabilitation treatment center was a provider in 2003.
C_ProvType2003_12_n	Indicates that an other medical provider was a provider in 2003.
C_ProvType2003_13_n	Indicates that provider type was unknown for a provider of medical/mental health services in 2003.
C_PhyTh2003_x_n	Indicates received physical therapy in 2003 from provider type x (where n=number of provider).
C_OccTh2003_x_n	Indicates received occupational therapy in 2003 from provider type x.
C_SpchTh2003_x_n	Indicates received speech therapy in 2003 from provider type x.
C_Med2003_x_n	Indicates received medical procedure in 2003 from provider type x.
C_Equip2003_x_n	Indicates received special equipment in 2003 from provider type x.
C_Coun2003_x_n	Indicates received personal counseling in 2003 from provider type x.
C_GrpTh2003_x_n	Indicates received group therapy in 2003 from provider type x.
C_WrkAs2003_x_n	Indicates received work assessment in 2003 from provider type x.
C_FnsJob2003_x_n	Indicates received help to find a job in 2003 from provider type x.
C_JobTrn2003_x_n	Indicates received job training in 2003 from provider type x.
C_JobMd2003_x_n	Indicates received advice about modifying work place in 2003 from provider type x.
C_JobCch2003_x_n	Indicates received job coaching in 2003 from provider type x.
C_Othr2003_x_n	Indicates received something else in 2003 from provider type x.
C_NumProvCont_x_n	Indicates number provider contacts in 2003 from provider type x.
C_ProvUse2003_x_n	Indicates usefulness of services received in 2003 from provider type x.

Variable Name	Description
C_DurProvVisit_x_n	Indicates duration of provider visits in 2003 from provider type x.
C_ProvPayServ_x_n	Indicates that provider paid for services received in 2003 from provider type x.
C_NoOnePayServ_x_n	Indicates that no one paid for services received in 2003 from provider type x.
C_SelfFamPayServ_x_n	Indicates that self/family paid for services received in 2003 from provider type x.
C_EnPayServ_x_n	Indicates that EN paid for services received in 2003 from provider type x.
C_MedicarePayServ_x_n	Indicates that Medicare paid for services received in 2003 from provider type x.
C_MedicaidPayServ_x_n	Indicates that Medicaid paid for services received in 2003 from provider type x.
C_EmplnPayServ_x_n	Indicates that employer paid for services received in 2003 from provider type x.
C_NonProfPayServ_x_n	Indicates that non-profit paid for services received in 2003 from provider type x.
C_WorkCompPayServ_x_n	Indicates that Worker's Comp paid for services received in 2003 from provider type x.
C_DisinsurPayServ_x_n	Indicates that Disability Insurance paid for services received in 2003 from provider type x.
C_OtherPayServ_x_n	Indicates that other paid for services received in 2003 from provider type x.
C_AgencyPayServ_x_n	Indicates that other agency paid for services received in 2003 from provider type x.
C_InsurPayServ_x_n	Indicates that health insurance paid for services received in 2003 from from provider type x.
C_SchoolPayServ_x_n	Indicates that school paid for services received in 2003 from provider type x.
C_SerCost2003_x_n	Cost of services received in 2003 from provider type x.

### Section I: Health and Functional Status

C_EquipFuncLim	Sample member uses equipment/device for any functional/sensory/communication limitation including seeing, hearing, speaking, or walking. Based on I19, I23, I27, and I31.
C_NumSenLim	Number of sensory/communication limitations reported including difficulty seeing, hearing, or speaking. Based on I17, I21, and I25.
C_NumSevSenLim	Number of severe sensory/communication limitations reported including inability to see, hear, or speak at all. Based on I18, I22, and I26.
C_NumPhyLim	Number of physical functional limitations reported including difficulty walking, climbing, lifting, grasping, reaching, standing, or stooping. Based on I29, I33, I35, I39, I41, and I43.
C_NumSevPhyLim	Number of severe physical functional limitations reported including inability to walk, climb, lift, grasp, reach, stand, or stoop at all. Based on I30, I34, I36, I38, I40, I42, and I44.
C_NumEmotLim	Number of emotional/social limitations including trouble concentrating, coping with stress, and getting along with others. Based on I59, I60, and I61

Variable Name	Description
C_NumADLs	Number of Activity of Daily Living tasks report difficulty with including getting around home, getting into and out of bed, difficulty bathing, and difficulty eating. Based on I45, I49, I51, and I57.
C_NumADLAssist	Number of Activity of Daily Living tasks require assistance with including getting around home, getting into and out of bed, bathing, and eating. Based on I46, I50, I52, and I58.
C_NumIADLs	Number of Instrumental Activities of Daily Living tasks report difficulty with including getting around outside home, shopping, and preparing meals. Based on I47, I53, and I55.
C_NumIADLAssist	Number of Instrumental Activities of Daily Living tasks require assistance with including getting around outside home, shopping, and preparing meals. Based on I48, I54, and I56.
C_MCSBP	SF-8 Mental (MCS-8) Weight for Bodily Pain.
C_MCSGH	SF-8 Mental (MCS-8) Weight for General Health.
C_MCSMH	SF-8 Mental (MCS-8) Weight for Mental Health.
C_MCSPF	SF-8 Mental (MCS-8) Weight for Physical Functioning.
C_MCSRE	SF-8 Mental (MCS-8) Weight for Role Emotional.
C_MCSR	SF-8 Mental (MCS-8) Weight for Role Physical.
C_MCSSF	SF-8 Mental (MCS-8) Weight for Social Functioning.
C_MCSVT	SF-8 Mental (MCS-8) Weight for Vitality.
C_PCSBP	Physical (PCS-8) Weights for Bodily Pain.
C_PCSGH	Physical (PCS-8) Weights for General Health.
C_PCSMH	Physical (PCS-8) Weights for Mental Health.
C_PCSPF	Physical (PCS-8) Weights for Physical Functioning.
C_PCSRE	Physical (PCS-8) Weights for Role Emotional.
C_PCSR	Physical (PCS-8) Weights for Role Physical.
C_PCSSF	Physical (PCS-8) Weights for Social Functioning.
C_PCSVT	Physical (PCS-8) Weights for Vitality.
C_SF8GH	SF-8 general health scale value. Based on I1.
C_SF8PF	SF-8 physical functioning scale value. Based on I2.
C_SF8RP	SF-8 role physical scale value. Based on I3.
C_SF8BP	SF-8 bodily pain scale value. Based on I4.
C_SF8VT	SF-8 vitality scale value. Based on I5.
C_SF8SF	SF-8 social functioning scale value. Based on I6.

Variable Name	Description
C_SF8MH	SF-8 mental health scale value. Based on I7.
C_SF8RE	SF-8 role emotional scale value. Based on I8.
C_PCS8TOT	SF-8 standardized aggregate summary physical health score (higher scores are indicative of better health). Based on C_PCSGH, C_PCSPF, C_PCSR, C_PCSBP, C_PCSVT, C_PCSSF, C_PCSMH, and C_PCSRE.
C_MCS8TOT	SF-8 standardized aggregate mental health summary score (higher scores are indicative of better health). Based on C_MCSGH, C_MCSPF, C_MCSR, C_MCSBP, C_MCSVT, C_MCSSF, C_MCSMH, C_MCSRE.
C_CAGEAlcohol	Summary of affirmative responses to CAGE items: I62-I65 (higher scores are indicative of greater alcohol dependence).
C_DrugDep	Summary of drug dependence items: I72-I76 (higher scores are indicative of greater drug dependence)

#### Section J: Health Insurance

C_CurMedicare	Currently covered by Medicare. Based on response to J1 or J9_2.
C_CurMedicaid	Currently covered by Medicaid. Based on response to J2 or J9_1.
C_CurMilInsur	Currently covered by military insurance. Based on response to J4 or J9_3.
C_CurIndInsur	Currently covered by Indian Health Insurance. Based on response to J9_4.
C_CurMedigap	Currently covered by Medi-Gap. Based on response to J9_5.
C_CurStAssist	Currently covered by State program. Based on response to J9_6.
C_CurPrivEmp	Currently covered by private insurance through own employer. Based on response to J6 or J9_7.
C_CurPrivSp	Currently covered by private insurance through spouse/partner/parent. Based on response to J6 or J9_8.
C_CurPrivSelf	Currently covered by private insurance paid for by self/family. Based on response to J6 or J9_9.
C_CurOtherInsur	Currently covered by other plan. Coded "yes" if report coverage associated with Indian Health Service, Medi-Gap, State program, or other plan.
C_CurNoInsur	Currently not covered by any insurance. Coded "yes" if J8=1 or no insurance coverage mentioned in J9.

#### Section K: Income and Other Assistance

C_LstMnthPay	Last month pay (pre-tax). Based on K3 (logical zero coded if K3=.L).
C_AmtPrivDis	Amount received from Private Disability last month. Based on K6 (logical zero coded if K6_a=0).
C_AmtWorkComp	Amount received from Workers' Compensation last month. Based on K6 (logical zero coded if K6_b=0).

Variable Name	Description
C_AmtVetBen	Amount received from Veterans' Benefits last month. Based on K6 (logical zero coded if K6_c=0).
C_AmtPubAssis	Amount received from public assistance or welfare payments last month. Based on K6 (logical zero coded if K6_d=0).
C_AmtUnemply	Amount received from Unemployment benefits last month. Based on K6 (logical zero coded if K6_e=0).
C_AmtPrivPen	Amount received from Private Pensions or government pensions last month. Based on K6 (logical zero coded if K6_f=0).
C_AmtOthReg	Amount received from other sources not on a regular basis last month. Based on K6 (logical zero coded if K6_g=0).
C_AmtOthRegSum	Amount from all sources received on regular basis last month. Summary of C_AmtOthReg, C_AmtPrivDis, C_AmtWorkComp, C_AmtVetBen, C_AmtPubAssis, C_AmtUnemply, C_AmtPrivPen, and income received from Social Security last month (N_TotSSbenLastMnth) (imputed values).
C_AmtOthNonReg	Amount received from other sources not on a regular basis last month. Based on K6 (logical zero coded if K6_h=0).
C_AmtFoodStamp	Amount received from Food Stamps last month. Based on K12 (logical zero coded if K11=0).
C_AmtOthgov	Amount received from any other government program last month. Based on K15 (logical zero coded if K13=0).
C_TotGovCashBen	Total government cash benefits received. Summary of C_AmtVetBen, C_AmtPubAssis, and N_TotSSbenLastMnth (imputed values).
C_TotNonCashBen	Total non-cash benefits received. Summary of C_AmtFoodStamp, and C_AmtOthGov.

### Section L: Sociodemographic Information

C_Race	Race categories. Based on L2.
C_BMI	Body Mass Index score. Based on L6ft, L6in, and L7.
C_BMI_cat	Body Mass Index categories. Based on C_BMI.
C_Hhsize	Household size. Based on L11, L16, and L17.
C_NumChildhh	Total number of children in household. Based on L17.
C_NumChildohh	Total number of children outside household. Based on L20.
C_numchildhh_pov	Total number of children calculated for use in Federal Poverty Index. Coded as "0" if live in group quarters. If live with un-related others, counts own children only.
C_FedPovertyLevel	Percent of federal poverty threshold relative to number of people in household for 2003. Based on Census Bureau 2003 thresholds.
C_HhInc2003	Total household income in 2003. Based on L23Ahop and L23Aamt.
C_Cohab	Indicates that sample member lives with spouse or partner. Based on L8, L9, and L10.

Variable Name	Description
<b>SSA Administrative Variables</b>	
OrgSampInfo_PrimDiagT16	SSA impairment code. From SSA administrative records.
OrgSampInfo_PrimDiagT2	SSA impairment code. From SSA administrative records.
OrgSampInfo_SecDiagT16	SSA impairment code. From SSA administrative records.
OrgSampInfo_SecDiagT2	SSA impairment code. From SSA administrative records.
OrgSampInfo_Hispanic	Indicates whether sample member hispanic or non-hispanic. Based on ethnicity from SSA administrative records.
OrgSampInfo_Race	Race of sample member. From SSA administrative records.
OrgSampInfo_Sex	Sex of Sample member. From SSA administrative records.
PIA1-50	Primary insurance amount
DOEI	Date of initial entitlement - SSDI
DOEC	Date of current entitlement - SSDI
PIED1-50	Pia effective date
DOD	Date of death
DBEN0201-412	Federal SSDI benefit paid
EPE0201-412	Extended Period of Eligibility
SBEN0201-412	SSI benefit paid
TERMSSD02	Termination indicator T2 for year
MEDR0201-412	Medicare indicator-T2
TERMSSD03	Termination indicator T2 for year
TERMSSD04	Termination indicator T2 for year
DAC	Indicates disabled adult child
DIB_DPM	T16 permanent disability indicator
BIC	Beneficiary identification code
TOC	Type of claim
IME1-50	Indexed monthly earnings
SMI_STAR	Start date for SMI
SMI_TERM	End date for SMI
CITIZEN	US citizen indicator
T2ONSET1-12	T2 disability onset date entry 1

Variable Name	Description
EICM0201-412	Countable earned income
UINC0201-412	Unearned income
SSIO201-412	SSI eligibility
SSDIO201-412	Monthly eligibility for SSDI
LONE0201-412	Lives alone
EARN0201-412	Earned income (remics)
MIEX0201-412	Medical improv expected indicator
DPEN0201-412	Number of dependents
FAMT0201-412	Federal SSI benefit due
SAMT0201-412	State SSI benefit due
New_DepenLastMnth	Dependent payment amount month before interview
New_SSDILastMnth	Federal SSDI benefit paid month before interview
N_SSIDLastMnth	SSI benefit paid month before interview.
New_TotSSBenLastMnth	Total Benefits for the Month Before the Interview date
N_BenAbsOfEarn_Atint	Benefits in the absence of earnings at interview. Based on FAMTyymm, SAMTyymm, EICMyymm, DBENyymm.
N_Depen_Atint	SSA dependent benefit amount at interview. Based on PBENyymm.
N_MCAID_Atint	SSI Medicaid Eligibility Status At time of Interview (based on SSA admin data)
N_MCARE_Atint	SSDI Medicare Eligibility Status at time of Interview (based on SSA admin data)
N_MnthsLngstTTWProv2003	Months with longest TTW provider in 2003
N_NumTTWProv2003	Total number of TTW providers in 2003
N_SSDI_Atint	Federal SSDI benefit paid at interview. Based on DBENyymm.
N_SSI_Atint	State and Federal SSI BENEFIT PAID month at interview. Based on SBENyymm
N_TTWmthsAssgnTkt	Number of months since TTW ticket first assigned
N_TTWPart2002	TTW Participant in year 2002. Based on active Moyymm.
N_TTWPart2003	TTW Participant in year 2003. Based on active Moyymm.
N_TTWPartT2004	TTW Participant in year 2004. Based on active Moyymm.
N_TTWPartEver	By time of Interview, TTW Participant ever. Based on active_MOyymm.
N_TTWPart_Atint	TTW participant at interview
N_TTWpmtypLngst2003	Longest TTW payment type by end of 2003 for TTW participants as indicated by flagparti. Based on provtypen, tktpmtypn, TktAsgnDdt, tktUnasgDtn.

Variable Name	Description
N_TTWProvTypLngst2003	Longest TTW Provider type by end of 2003 for TTW participants as indicated by flagparti. Based on provtypen, tktpmttypn, TktAsgnDdt, tktUnasgDtn.
N_TTWElig_Atint	TTW eligibility at month of interview
N_TTWMailed_Atint	TTW ticket mailed prior to (month before) interview month
N_TTWMnthsTktMail	Months from TTW ticket mail month until interview date
N_TTWMonenrl03	Number of months enrolled in TTW in 2003
N_TTWMonenrl_Atint	As of interview month, number of months enrolled in TTW. Based onactive_Moyymm.
N_TTWUnAssignDate_Atint	For former TTW participants (as of interview), last ticket unassignment date
N_TotSSBen_Atint	Total Benefits at Interview date
N_BenStatAtint2	Beneficiary status at Interview, if missing then at samp info used. Based on SSI0402-SSI0410, SSDI0402-SSDI410
N_SSDINoMcr_Atint	SSDI no Medicare at Interview. Based on SSDI0402-SSDI410, medr0402-medr410.
N_MthsEarlEnt	Months since earliest SSI or SSDI entitlement date by time of interview. Based on DOEI, MINGRD, T2begspan1-T2begspan12, T16begspan1-T16begspan22
N_MthsRecent	Months since most recent SSI or SSDI entitlement date by time of interview. Based on DOEI, maxelgrd, T2begspan1-T2begspan12, T16begspan1-T16begspan22
N_FIPSAAtint	FIPS (State and County) code at Interview
N_EPEAtint	EPE in survey month
N_PIAAtint	Primary Insurance Amount (PIA) at Interview. Based on PIA1-PIA50, PIED1-PIED50.
N_DeathInd	Death Indicator

*PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING*

**APPENDIX F**

**VARIABLES DROPPED OR REPLACED ON PUBLIC USE FILE  
AND REASON FOR DROP/REPLACEMENT**

***PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING***

VARIABLES DROPPED OR REPLACED ON PUBLIC USE FILE AND REASON FOR DROP/REPLACEMENT

Variable	Label	File Status	Reasons for Drop/Replace
FINAL	Final Status Code	DROP	Survey administration variable
LINKID	Caseid	DROP	Possible identifier when longitudinal files merged
LASTDATE	Interview Date	DROP	Survey administration variable
C_INTMNTH	Month of Interview	DROP	Survey administration variable
C_INTDAY	Day of Interview	DROP	Survey administration variable
C_INTYEAR	Year of Interview	DROP	Survey administration variable
C_INTMODE	Interview Mode	DROP	Survey administration variable
INTERVIEWLANGUAGE	Interview Language	DROP	Survey administration variable
ORGSAMPINFO_DOB	Sample Date of Birth	DROP	Unique identifier
C_INTAGE	Age at Interview	REPLACE	Possible identifier. Use C_INTAGE_PUB
ORGSAMPINFO_SSIAGE	Sample Date First Recieved SSI Benefits	DROP	Survey administration variable
ORGSAMPINFO_SDATE	Date Sample Frame Pulled	DROP	Survey administration variable
ORGSAMPINFO_SSIAGE	Sample Age First Recieved SSI Benefits	DROP	Survey administration variable
ORGSAMPINFO_PSU	Sample PSU	DROP	Contains geographic information. Have A_PSU_PUB
ORGSAMPINFO_PHASE	Sample Phase	DROP	Contains geographic information. Have A_STRATA
ORGSAMPINFO_RELEASE	Sample Release Number	DROP	Survey administration variable
ORGSAMPINFO_HISPANIC	Sample Hispanic or Non-Hispanic	DROP	Possible identifier.
ORGSAMPINFO_AGE	Sample Age	DROP	Possible identifier. Have age at interview construct
ORGSAMPINFO_RACE	Sample Race	DROP	Possible identifier. Have survey race construct (C_RACE_I_PUB)
ORGSAMPINFO_PRIMDIAGT16	PRIMARY DIAGNOSIS-T16	DROP	SSA administrative data
ORGSAMPINFO_SECDIAGT16	SECONDARY DIAGNOSIS-T16	DROP	SSA administrative data
ORGSAMPINFO_PRIMDIAGT2	PRIMARY DIAGNOSIS-T2	DROP	SSA administrative data
ORGSAMPINFO_SECDIAGT2	SECONDARY DIAGNOSIS-T2	DROP	SSA administrative data
C_PAYMENTTYPE	Participant EN Payment Type	DROP	Ticket participant identifier
C_COHORT	Beneficiary Age Cohort	DROP	Possible identifier. Have age at interview construct (C_INTAGE_PUB). Strata information available in A_Strata.
ORGSAMPINFO_TSTATUS	Participant or Beneficiary Sample Member	DROP	Ticket participant identifier
A_PSU	Analytical PSU	REPLACE	Geographic information. Use A_PSU_PUB
FLAGPARTI	Participant in Round 1 Phase 1 Frame	DROP	Use d in creation of combined weight
WGT1_PARTIFINLE3	Final Participant Weight for E3 skip	DROP	Ticket participant identifier
WGT1_PARTIFINLE15	Final Participant Weight for E15 skip	DROP	Ticket participant identifier
WGT1_PARTIFINLE12	Final Participant Weight for E12 skip	DROP	Ticket participant identifier
WGT1_PARTIFINL	Final Participant Weight	DROP	Ticket participant identifier
WGT1_COMBFINLE3	Final combined Weight for E3 skip	DROP	Not needed since Ticket sample not on file. Use WGT1_BENEFINLE3
WGT1_COMBFINLE15	Final combined Weight for E15 skip	DROP	Not needed since Ticket sample not on file. Use WGT1_BENEFINLE15
WGT1_COMBFINLE12	Final combined Weight for E12 skip	DROP	Not needed since Ticket sample not on file. Use WGT1_BENEFINLE12

Variable	Label	File Status	Reasons for Drop/Replace
WGT1_COMBFINL	Round 1 Combined Weight	DROP	Not needed since Ticket sample not on file. Use WGT1_BENEFINL
E2SKIP	Skipped E3 to E10	DROP	Survey administration variable
E12SKIP	Skipped E12 to E13	DROP	Survey administration variable
E15SKIP	Skipped E15 to E18	DROP	Survey administration variable
E24SKIP	Skipped E24	DROP	Survey administration variable
SVRA	SVRA Switch	DROP	Survey administration variable
A68	Reported Month of Birth	DROP	Unique Identifier
A68A	Reported Day of Birth	DROP	Unique Identifier
A68B	Reported Year of Birth	DROP	Unique Identifier
A69	Reported Age	DROP	Possible identifier. Have age at interview construct (C_INTAGE_PUB)
A73	Respondent and Interview Type	DROP	Summarized in construct C_RTYPE
A74	Resp Lists Topics of Survey (First Time)	DROP	Survey administration variable
A76	Resp Lists Topics of Survey (Second Time)	DROP	Survey administration variable
A77	Resp Understands Voluntary (First Time)	DROP	Survey administration variable
A77A	Resp Understands Voluntary (Second Time)	DROP	Survey administration variable
A78	Resp Understands Confidential (First Time)	DROP	Survey administration variable
A78A	Resp Understands Confidential (Second Time)	DROP	Survey administration variable
A86	New Proxy Lists Topics of Survey (First Time)	DROP	Survey administration variable
A88	New Proxy Lists Topics of Survey (Second Time)	DROP	Survey administration variable
A89	New Proxy Understands Voluntary (First Time)	DROP	Survey administration variable
A89A	New Proxy Understands Voluntary (Second Time)	DROP	Survey administration variable
A90	New Proxy Understands Confidential (First Time)	DROP	Survey administration variable
A90A	New Proxy Understands Confidential (Second Time)	DROP	Survey administration variable
A92	Proxy Failed Cognitive Test	DROP	Survey administration variable
B5	Currently receiving benefits	DROP	Little analytic value
B7	Eligible for Other Reasons	DROP	Little analytic value
B9	Recvd Benefits In Last 5 Yrs	DROP	Little analytic value
B11	Still Have Conditions That Made Elig	DROP	Little analytic value
B13	Previously Eligible for Other Reasons	DROP	Little analytic value
B16	Limited by Other Conds When First Recvd Benefits	DROP	Little analytic value
B18_AGE	Age First Became Limited	DROP	Possible identifier. Summarized in construct C_DISAGE
B18_YEAR	Year First Became Limited	DROP	Possible identifier. Summarized in construct C_DISAGE
B19	Limited Before 18	DROP	Possible identifier. Summarized in construct C_ADULTCHILD_ONSET
B22	Working For Pay When First Limited	DROP	Possible identifier. Summarized in construct C_EVRWORKED
B23	Job When First Limited Required Comp Use	DROP	Possible identifier and few respondents
B24	Currently Working	DROP	Imputed version on file

Variable	Label	File Status	Reasons for Drop/Replace
B24_IFLAG	Currently Working, Imputation Flag	DROP	Little analytic value
B32	Worked Before Nov 1 2003	DROP	Possible identifier and few respondents. Item dropped in subsequent rounds
B36	Ever Worked	DROP	Possible identifier. Summarized in construct C_EVRWORKED
C_MAINCONICD9_1-_9	Main Condition ICD-9	DROP	Possible identifier. Summarized in construct C_MAINCONCOLDIAGGRP_I
C_MAINCONDIAGGRP_1-_9	Main Condition Diagnosis Group	DROP	Imputed version on file
C_MAINCONDIAGGRP_I	Main Condition Diagnosis Group Imputed	DROP	Summarized in construct C_MAINCONCOLDIAGGRP_I
C_MAINCONDIAGGRP_IFLAG	Main Condition Diagnosis Group Imputation Flag	DROP	Little analytic value
C_MAINCONCOLDIAGGRP_1-_9	Main Condition Diagnosis Group Collapsed	DROP	Imputed version on file
C_MAINCONCOLDIAGGRP_I	Main Condition Diagnosis Group Collapsed (Code 1), Imputed	DROP	Possible identifier--re-categorized for PUF. Use C_MAINCONCOLDIAGGRP_I_PUB.
C_MAINCONCOLDIAGGRP_IFLAG	Main Condition Diagnosis Group Collapsed Imputation Flag	DROP	Little analytic value
C_MAINCONBODYGROUP_1-_9	Main Condition Body Group	DROP	Imputed version on file
C_MAINCONBODYGROUP_I	Main Condition Body Group, Imputed	DROP	Summarized in construct C_MAINCONCOLDIAGGRP_I
C_MAINCONBODYGROUP_IFLAG	Main Condition Body Group, Imputation Flag	DROP	Little analytic value
C_SECCONICD9_1-_9	Secondary Condition ICD-9 (Code 1)	DROP	Possible identifier. All secondary conditions dropped
C_SECCONDIAGGRP_1-_9	Secondary Condition Primary Diagnosis Group (Code 1)	DROP	Possible identifier. All secondary conditions dropped
C_SECCONCOLDIAGGRP_1-_9	Secondary Condition Primary Diagnosis Group Collapsed (Code 1)	DROP	Possible identifier. All secondary conditions dropped
C_SECCONBODYGROUP_1-_9	Secondary Condition Body Group (Code 1)	DROP	Possible identifier. All secondary conditions dropped
C_REASBECELIGICD9	Reason Became Eligible ICD-9 (Code 1)	DROP	Possible identifier.
C_REASBECELIGDIAGGRP	Reason Became Eligible Diagnosis Group (Code 1)	DROP	Little analytic value.
C_REASBECELIGCOLDIAGGRP	Reason Became Eligible Diagnosis Group Collapsed (Code 1)	DROP	Little analytic value.
C_REASBECELIGBODYGROUP	Reason Became Eligible Body Group (Code 1)	DROP	Little analytic value.
C_DISAGE	Age at Onset of Disability	DROP	Imputed version on file
C_DISAGE_I	Age at Onset of Disability, Imputed	DROP	Possible identifier. Use C_ADULTCHILD_ONSET_I
C_DISAGE_IFLAG	Age at Onset of Disability, Imputation Flag	DROP	Little analytic value
C_ADULTCHILD_ONSET	Adult/Child Onset of Disability	DROP	Imputed version on file
C_ADULTCHILD_ONSET_IFLAG	Adult/Child Onset of Disability, Imputation Flag	DROP	Little analytic value
C1	Number Current Jobs	DROP	Imputed version on file
C1_I	Number Current Jobs, Imputed	DROP	Possible identifier and few respondents
C1_IFLAG	Number Current Jobs, Imputation Flag	DROP	Little analytic value
C4MTH_1	Month Started Current Job (Job 1)	DROP	Possible identifier. Summarized in construct C_MNTHSMAINCURJOB
C4YR_1	Year Started Current Job (Job 1)	DROP	Possible identifier. Summarized in construct C_MNTHSMAINCURJOB
C5B_1	Notified SSA Working-Weeks or Months (Job 1)	DROP	Possible identifier. Summarized in construct C_MAINCURJOBREPSSA

Variable	Label	File Status	Reasons for Drop/Replace
C5BWEEK_1	Number Weeks Before Notified SSA (Job 1)	DROP	Summarized in construct C_MAINCURJOBREPSSA
C5BMONTH_1	Number Months Before Notified SSA (Job 1)	DROP	Summarized in construct C_MAINCURJOBREPSSA
C6_1	Self-employed at Current Job (Job 1)	DROP	Possible identifier and few respondents
C8_1	Hours per Week Usually Work at Current Job (Job 1)	DROP	Imputed version on file
C8_1_I	Hours per Week Usually Work at Current Job (Job 1), Imputed	DROP	Possible identifier. Summarized in constructs C_TOTCURWKHRS and C_TOTCURHRMNTH
C8_1_IFLAG	Hours per Week Usually Work at Current Job (Job 1), Imputation Flag	DROP	Little analytic value
C9_1	Weeks per Year Usually Work at Current Job (Job 1)	DROP	Possible identifier. Cell sizes too small to create categories
C11_1	Regular Hourly Pay at Current Job (Job 1)	DROP	Possible identifier. Summarized in construct C_MAINCURJOBHRPAY
C12AMT_1	Amount Paid Before Taxes at Current Job (Job 1)	DROP	Possible identifier. Sumarized in constructs C_MAINCURJOBHRPAY, C_MAINCURJOBMNTHPAY
C12HOP_1	How often Paid at Current Job (Job 1)	DROP	Possible identifier. Sumarized in constructs C_MAINCURJOBHRPAY, C_MAINCURJOBMNTHPAY
C13AMT_1	Amount Take Home Pay at Current Job (Job 1)	DROP	Possible identifier. Summarized in constructs C_MAIN CURJOBHRPAYTH, C_MAINCURJOBMNTHPAY
C13HOP_1	How often Paid at Current Job (Job 1)	DROP	Possible identifier. Summarized in constructs C_MAIN CURJOBHRPAYTH, C_MAINCURJOBMNTHPAY
C16_1	Recvd Promotion in Past 12 Months	DROP	Possible identifier and few respondents
C20E_1	Employer Offers Childcare	DROP	Possible identifier and few respondents
C20F_1	Employer Offers Transportation	DROP	Possible identifier and few respondents
C20G_1	Employer Offers Long-Term Dis	DROP	Possible identifier and few respondents
C20I_1	Employer Offers Flex Health Spending	DROP	Possible identifier and few respondents
C4MTH_2-_4	Month Started Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C4YR_2-_4	Year Started Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C5A_2-_4	Notified SSA Working	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C5B_2-_4	Notified SSA Working-Weeks or Months	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C5BWEEK_2-_4	Number Weeks Before Notified SSA	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C5BMONTH_2-_4	Number Months Before Notified SSA	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C6_2-_4	Self-employed at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C7_2-_4	Current Job Part of Sheltered Workshop	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C8_2-_4	Hours per Week Usually Work at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C9_2-_4	Weeks per Year Usually Work at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C10_2-_4	Paid by Hour at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C11_2-_4	Regular Hourly Pay at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.

Variable	Label	File Status	Reasons for Drop/Replace
C12AMT_2-_4	Amount Paid Before Taxes at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C12HOP_2-_4	How often Paid at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C13AMT_2-_4	Amount Take Home Pay at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C13HOP_2-_4	How often Paid at Current Job	DROP	Too few respondents. All job information for jobs 2-4 dropped. Only job 1 retained.
C23_1	Uses Brace to Help Work	DROP	Possible identifier and few respondents
C23_2	Uses Cane/Crutches/Walker to Help Work	DROP	Possible identifier and few respondents
C23_3	Uses Wheelchair to Help Work	DROP	Possible identifier and few respondents
C23_4	Uses Modified Comp Hardware to Help Work	DROP	Possible identifier and few respondents
C23_5	Uses Modified Comp Software to Help Work	DROP	Possible identifier and few respondents
C23_6	Uses Other Equip to Help Work	DROP	Possible identifier and few respondents
C23_7	Used Hearing Aids to Help Work	DROP	Possible identifier and few respondents
C23_8	Used Glasses to Help Work	DROP	Possible identifier and few respondents
C24_1	SP Paid for Special Work Equip	DROP	Possible identifier and few respondents
C24_2	Family Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_3	Health Insurance Paid for Special Work Equip	DROP	Possible identifier and few respondents
C24_4	Medicare Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_5	Medicaid Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_6	Employer Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_7	State VR Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_8	Non Profit Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_9	Worker's Comp Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C24_10	Disability Insur Paid for Special Work Equip	DROP	Possible identifier and few respondents
C24_11	Other Paid for Special Work Equipment	DROP	Possible identifier and few respondents
C25	Family Pays Cost of Special Work Equip	DROP	Possible identifier and few respondents
C26AMT	Amount Family Pays for Special Work Equip	DROP	Possible identifier and summarized in construct (C_CURMNTHEQUIPEXP)
C26HOP	How often Paid Special Work Equip	DROP	Possible identifier and summarized in construct (C_CURMNTHEQUIPEXP)
C28_1	Use Job Coach to Work	DROP	Possible identifier and few respondents
C28_2	Use Sign Lang Interp to Work	DROP	Possible identifier and few respondents
C28_3	Use Reader to Work	DROP	Possible identifier and few respondents
C28_4	Use Personal Care Attend to Work	DROP	Possible identifier and few respondents
C28_5	Use Other to Work	DROP	Possible identifier and few respondents
C29_1	SP Paid for Personal Assistance	DROP	Possible identifier and few respondents
C29_2	Family Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_3	Health Insur Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_4	Medicare Pays for Personal Assistance	DROP	Possible identifier and few respondents

Variable	Label	File Status	Reasons for Drop/Replace
C29_5	Medicaid Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_6	Employer Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_7	State VR Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_8	Non-Profit Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_9	Worker's Comp Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_10	Disability Insur Pays for Personal Assistance	DROP	Possible identifier and few respondents
C29_11	Other Pays for Personal Assistance	DROP	Possible identifier and few respondents
C30	Family Pays Personal Assistance Costs	DROP	Possible identifier and few respondents
C31AMT	Amount Family Pays for Personal Assistance	DROP	Possible identifier and summarized in construct C_CURMNTHPASEXP

**APPENDIX G**

**VARIABLES RECODED FOR THE PUBLIC USE FILE**

*PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING*

VARIABLES RECODED FOR THE PUBLIC USE FILE

Variable Name	Description of Recode
Caseid_Pub	Caseid assigned that cannot be linked across survey rounds.
A_PSU_PUB	Values scrambled for PUF.
C_MainConColDiagGrp_PUB	Grouped as 0=Other, 1=Mental Illness, 2=Cognitive Disability, 3=Muscular/Skeletal, 4=Sensory Disorders.
C_Intage_PUB	Grouped by ranges for PUF (18-25, 26-40, 41-55, and 56 and older).
C_MainCurJobSOC_PUB	Grouped as: 1=Service Occupations, 2=Sales, Office, and Administrative Occupations, 3=Production and Transportation.
C_MainCurJobNAICS_PUB	Grouped as: Manufacturing, Construction, Utilities, Mining, and Agriculture; Retail and Wholesale Trade; Administration, Management, Professional, Real Estate, Information, Finance, and Education; Health Care and Social Assistance; and Other Industries.
C_Totcurmthpay_I_PUB	Grouped as 1=200 or <, 2=201-600; 3=601-800, and 4=>800.
C_MnthMainCurJob_PUB	Bottom coded at 6 and top coded at 36 for PUF.
C_MainCurJobRepSSA_PUB	Top coded at 4 for PUF.
C_TotCurWkHrs_I_PUB	Bottom coded at 8 and top coded at 40 for PUF.
C_TotCurHrMnth_I_PUB	Bottom code at 35 and top coded at 174 for PUF.
D6yr_m_PUB	Main job held in 2003 computed by determining which job had most hours worked in 2003. Bottom coded at 2000 for PUF.
D8yr_m_PUB	Main job held in 2003 computed by determining which job had most hours worked in 2003. No recode needed.
D15_m_PUB	Main job held in 2003 computed by determining which job had most hours worked in 2003. No recode needed.
D16_m_PUB	Main job held in 2003 computed by determining which job had most hours worked in 2003. Bottom coded at 8 and and top coded at 40 for PUF.
D17_m_PUB	Main job held in 2003 computed by determining which job had most hours worked in 2003. Bottom coded at 12 for PUF.
D18_m_PUB	Main job held in 2003 computed by determining which job had most hours worked in 2003. No recode needed.
C_MainJob2003SOC_PUB	Grouped as: 1=Service Occupations, 2=Sales, Office, and Administrative Occupations, 3=Production and Transportation.

Variable Name	Description of Recode
C_MainJob2003NAICS_PUB	Grouped as: Manufacturing, Construction, Utilities, Mining, and Agriculture; Retail and Wholesale Trade; Administration, Management, Professional, Real Estate, Information, Finance, and Education; Health Care and Social Assistance; and Other Industries.
C_MainJobMnthPay2003_PUB	Grouped into 4 categories: 1=200 or <, 2=201-600; 3=601-800, and 4=>800.
C_Tot2003Pay_PUB	Categorized in increments of 1000 and top coded at 7000 for PUF.
C_TotHrs2003_PUB	Bottom coded at 520 and top coded at 2080 for PUF.
C_UsWkHr2003_PUB	Top coded at 40 for PUF.
C_NumProv2005_PUB	Top coded at 4 for PUF.
C_TotServCost2003_PUB	Top coded at 6,000 for PUF.
C_NumProvEvused_PUB	Top coded at 6 for PUF.
J11_10_PUB	Grouped J11_3, 4, and 5 with 10 (other) for PUF.
INCSOURCE1_PUB	Indicates received income from private disability, workers' compensation, or unemployment last month. K4, K6, and K14 grouped for PUF.
INCSOURCE2_PUB	Indicates received income from Veterans' Benefits or Public Assistance last month. K4, K6, and K14 grouped for PUF.
INCSOURCE3_PUB	Indicates received income from private pension last month. K4, K6, and K14 grouped for PUF.
INCSOURCE4_PUB	Indicates sources received income from other source on regular or non-regular basis last month. K4, K6, and K14 grouped for PUF.
INCSOURCE5_PUB	Indicates received Food Stamps last month. K4, K6, and K14 grouped for PUF.
INCSOURCE6_PUB	Indicates received housing, energy, food, or other government assistance last month. K4, K6, and K14 grouped for PUF.
INCSOURCE7_PUB	Indicates received income from Social Security from last month. K4, K6, and K14 grouped for PUF.
C_LstMnthPay_PUB	Grouped into 5 categories: 0, 1=200 or <, 2=201-600; 3=601-800, and 4=>800.
C_TotGovCashBen_PUB	Bottom code at 30 and top coded at 1600 for PUF.
C_TotNonCashBen_PUB	Top coded at 230 for PUF.

Variable Name	Description of Recode
L3_I_PUB	Grouped as: 1=Did not complete HS or GED; 2=HS or equivalent; 3=Some college (1-3 years); 4=4-year degree or higher; 5=Other for PUF.
L4_PUB	Grouped as: 1=Did not complete HS or GED; 2=HS or equivalent; 3=Some college (1-3 years); 4=4-year degree or higher; 5=Other for PUF.
L5_PUB	Grouped as: 1=Did not complete HS or GED; 2=HS or equivalent; 3=Some college (1-3 years); 4=4-year degree or higher; 5=Other for PUF.
L8_I_PUB	Grouped as: 1=Married; 2=Other.
L11_I_PUB	Grouped as 1=Live with parents/spouse/partner, 2=Other.
L12_PUB	Grouped as 1= Single family home/Mobile home/Regular apartment, 2=Other.
L24_PUB	Bottom coded as 1 and top coded as 9 for PUF.
C_Race_I_PUB	Grouped as 1=White, 2=Other.
C_Hhsize_PUB	Top coded at 6 for PUF.
C_NumchildHH_PUB	Top coded at 1 for PUF.
C_NumOwnChildOHH_PUB	Top coded for PUF. Supressed if number non-own children in household + number own children in household is > 4 or if number own children in household + number own children outside the household > 4 to prevent reverse calculating from totals.
C_NumOwnChildHH_PUB	Top coded at 1 for PUF.
C_NumNonOwnChildHH_PUB	Top coded for PUF. Supressed if number non-own children in household + number own children in household is > 4 or if number own children in household + number own children outside the household > 4 to prevent reverse calculating from totals.
C_NumOwnChild_PUB	Top coded at 4 for PUF
C_Numadulthh_PUB	Top coded at 2 for PUF
C_HhInc2003_PUB	Grouped as 1=<10,000, 2=10,000-20,000, 3=20,001-30,000, 4=30,001-40,00, 5=40,001-60,000, 6=60,001 and >.
New_DepenLastMnth_PUB	Top coded at 400 for PUF.
New_SSDILastMnth_PUB	Top coded at 1300 for PUF.
N_SSIlastMnth_PUB	Top coded at 800 for PUF.

Variable Name	Description of Recode
New_TotSSbenLastMnth_PUB	Top coded at 1500 for PUF.
N_BenAbsofEarn_atInt_PUB	Top coded at 1500 for PUF.
N_MthsEarlEnt_PUB	Grouped as: 0-18, 19-30, 31-36, 37-41 months, etc. Top coded at 361 months for PUF.
N_MthsRecEnt_PUB	Grouped as: 0-18, 19-30, 31-36, 37-41 months, etc. Top coded at 241 months for PUF.

**APPENDIX I**

**SAMPLING VARIANCE ESTIMATION AND SAMPLE SUDAAN AND SAS  
STATEMENTS**

***PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING***

## **SAMPLING VARIANCE ESTIMATION AND SAMPLE SUDAAN STATEMENTS**

The computation of an estimate of a population characteristic (such as the proportion of Ticket participants who receive specific services) can be performed using the sampling weights and routines available in most statistical software or computer programs. Measures of the reliability of this estimate require the computation of the sampling variance. As described in Chapter VIII, the design-based sampling variance of an estimate derived from survey data for a statistic is a measure of the random variation among estimates of the same statistic computed over repeated implementation of the same sample design with the same sample size on the same population. The sampling variance is a function of the population characteristics, the form of the statistic, and the nature of the sampling design. Only some statistical software has the capability to compute the design-based sampling variance.

There are a number of releases of the software for survey data analysis, running on several different platforms. Although the same procedure statements are used, there can be enhancements or subtle differences from one release to the next, particularly in reading and writing external data files. The statements displayed in the examples in this appendix are tailored for SUDAAN Release 9.0.0, SAS-Callable for Windows, and for SAS version 9.1. The user should take this into consideration when using these examples or parts of these examples verbatim.

Currently, more survey data analysis software packages use the Taylor series linearization procedure and explicit sampling variance equations. Therefore, we developed the variance estimation specifications necessary for the Taylor series linearization procedure (PseudoStrata and PseudoPSU). The example procedures represent relatively simple, straightforward applications. The options (various parameters, test statistics, etc.) in the sample programs may

not be suitable for all your needs. Likewise, particular types of analyses may require options that are not displayed in the sample program statements. Our intention is not to suggest analytical approaches but to provide the key parameters that capture the relevant characteristics of the sample design. These parameters are found in the SUDAAN *design, weight, and nest* statements, and the SAS *weight, strata, and cluster* statements.<sup>1</sup> In addition, the examples are limited to simple descriptive procedures for producing means or percentages. The same sample design parameters used for descriptive procedures are used for more complex estimation procedures such as regression or logit.

The NBS is made up of two samples, the Representative Beneficiary Sample and the Ticket Participant Sample, each of which can be used for certain types of analyses. The Ticket Participant Sample is a subgroup of beneficiaries living in Phase 1 states who used the ticket at least once as of January 1, 2003, or between January 1, 2003 and September 29, 2003. The Representative Beneficiary Sample is a nationally representative sample of SSI and DI beneficiaries who were in active pay status as of June 2003. Each sample requires different sample design statements and weights. The user is encouraged to review the tables in Chapter III, which indicate the appropriate weights for Ticket Participant and Representative Beneficiary analyses. Table 4.1 from Chapter IV explains how to choose the design variables appropriate for each type of estimate.

The following examples are provided:

#### 1. *National Estimates*

- Beneficiaries who have ever worked (C\_EvrWorked)

---

<sup>1</sup> The *strata* and *cluster* statements in SAS perform the same function as the *nest* statement in SUDAAN. *Weight* has the same function in the two software packages. There is no equivalent statement in SAS to the *design* statement in SUDAAN, which allows for sampling with or without replacement. SAS assumes sampling with replacement, unless the TOTAL= option is implemented. In the NBS, sampling is done with replacement.

- Beneficiaries using employment related services in 2003 (C\_SERVUSE2003)

## 2. *TTW Participant Estimates*

- Estimate of ticket participants currently working (B24\_i)
- Number of ticket participants with ticket assigned to an Employment Network in 2003 (E37)

Preprocessing or recoding may be required for some variables because of missing data. Missing data in the NBS files are assigned a value of .D, (don't know) .R. (refused), .M (missing), .L (logical skip), or .P (partial completed).

Classification variables (identified by the SUBGROUP statement in SUDAAN and the DOMAIN statement in SAS) with zero or negative values will be treated by SUDAAN as missing and dropped from the procedure. This is not true for SAS, where the zero or negative values will be treated the same as positive values for the classification variable. This also does not hold true for analysis variables for either SAS or SUDAAN (VAR for both) where zero or negative values are valid. Records with zero weights will automatically be excluded from estimates produced in SUDAAN and SAS procedures.

When using SUDAAN or SAS, the full sample should be processed even when analyses are limited to subgroups or subpopulations. This is to ensure the correct computation of the sampling variance. The SUDAAN statement SUBPOPN should be used to identify the specific analytic subpopulation of interest. The target population can be broken into desired subpopulations using the DOMAIN statement in SAS, though analysis is not limited to the single subpopulation of interest. The sampling variance estimates that SAS and SUDAAN compute may be wrong if the file is reduced to a specific subpopulation prior to running the procedure.

## **1. National Estimates**

This example estimates the percentage of beneficiaries who have ever worked and ever used services in 2003. Standard errors of the percentages, unweighted and weighted population counts, and sample design effects are also included in the output. SUDAAN reads only the 6,520 observations for the National Beneficiary Sample; the other 1,083 observations are skipped because the weight variable Wgt1\_Benefinl is nonpositive.

- Use the Representative Beneficiary Sample to provide an estimate of C\_EvrWorked (ever worked for pay).
- Use the Representative Beneficiary Sample to provide an estimate of C\_SERVUSE2003 (Used services in 2003).

## **SUDAAN PARAMETERS FOR NATIONAL ESTIMATES FROM THE NBS ROUND 1 REPRESENTATIVE BENEFICIARY SAMPLE**

Analysis of Variable C\_EvrWorked (ever worked for pay)

### **SUDAAN EXAMPLE**

```
proc descript data="SASdatasetname" filetype=sas design=wr;
nest      A_STRATA A_PSU / missunit;
weight    Wgt1_Benefinl ;
var       C_EvrWorked ;
print nsum wsum mean semean deffmean / style=nchs
wsumfmt=f10.0 meanfmt=f8.4 semeanfmt=f8.4 deffmeanfmt=f8.4;
title "TTW National Estimates";
```

### **SAS EXAMPLE**

```
proc surveymeans data="SASdatasetname";
strata    A_STRATA;
cluster   A_PSU;
weight    Wgt1_Benefinl ;
var       C_EvrWorked ;
title     "TTW National Estimates";
```

Analysis Variable of C\_SERVUSE2003 (used services in 2003).

### **SUDAAN EXAMPLE**

```
proc descript data="SASdatasetname" filetype=sas design=wr;
nest      A_STRATA A_PSU / missunit;
weight    Wgt1_Benefinl;
var       C_SERVUSE2003 ;
print nsum wsum mean semean deffmean / style=nchs
wsumfmt=f10.0 meanfmt=f8.4 semeanfmt=f8.4 deffmeanfmt=f8.4;
title "TTW National Beneficiary Estimates";
```

### **SAS EXAMPLE**

```
proc surveymeans data="SASdatasetname";
strata    A_STRATA;
cluster   A_PSU;
weight    Wgt1_Benefinl ;
var       C_SERVUSE2003;
title     "TTW National Estimates";
```

## Weight Variables

Beneficiary sample: **Wgt1\_Benefinl**  
Combined samples: **Wgt1\_Combfinl**

## Nest Variables

### A\_STRATA

1. Clustered samples for both beneficiaries and participants
  - a. A\_STRATA = 100 for PSUs in Phase 1 states
  - b. A\_STRATA = 200 for PSUs in Phase 2 states
  - c. A\_STRATA = 300 for PSUs in Phase 3 states
2. Unclustered samples for participants requiring unclustered sample
  - a. A\_STRATA = 111 Outcome-only participants in PSUs in Phase 1 states
  - b. A\_STRATA = 112 Outcome-only participants not in PSUs in Phase 1 states

### A\_PSU

1. Clustered samples for both beneficiaries and participants  
A\_PSU = PSU identifier
2. Unclustered samples for participants requiring unclustered sample  
A\_PSU = MPR\_ID for Outcome-only participants

## Notes:

1. Before each SUDAAN procedure, sort by A\_STRATA and A\_PSU. Sorting is not required in SAS.
2. Use SUDAAN's SUBPOPN statement to define the subpopulation for which estimates are wanted. For example, for estimates of SSI participant subpopulation, use SUBPOPN to define SSI participants. In SAS, you must use the DOMAIN statement to identify subpopulations of interest. For example, suppose the variable BENETYPE indicates the type of beneficiary, with 3 levels: SSI, SSDI, and both SSI and SSDI. If you want an estimate involving the subpopulation of all SSI beneficiaries, then you would need to create a second variable, BENETYPE2, combining the two relevant levels of BENETYPE, then use DOMAIN with the BENETYPE2 variable to obtain the needed estimate.

## **2. Ticket Participant Estimates**

This example estimates the percentage of TTW participants working at the time of interview and the number of participants with a ticket assigned to an Employment Network in 2004. Standard errors of the percentages, unweighted and weighted population counts, and sample design effects are also included in the output. SUDAAN reads only the 1,083 observations for the Ticket Participant Sample; the other 6,520 observations are skipped because the weight variable WGT1\_PARTIFINL is nonpositive.

- Use the Ticket Participant Sample to provide estimate of B24\_i (currently working, imputed).
- Use the Ticket Participant Sample to provide estimate of E37 (number of participants with ticket assigned to an Employment Network in 2003).

## **SUDAAN PARAMETERS FOR NATIONAL ESTIMATES FROM THE NBS ROUND 1 CROSS-SECTIONAL PARTICIPANT SAMPLE**

Analysis Variable of B24\_i (currently working, imputed).

### **SUDAAN EXAMPLE**

```
proc descript data="SASdatasetname" filetype=sas design=wr;
  nest      A_STRATA A_PSU / missunit;
  weight    Wgt1_Partifnl;
  var      "B24_i (currently working, imputed)" ;
  print nsum wsum mean semean deffmean / style=nchs
  wsumfmt=f10.0 meanfmt=f8.4 semeanfmt=f8.4 deffmeanfmt=f8.4;
  title "TTW Cross-Sectional Participant National Estimates";
```

### **SAS EXAMPLE**

```
proc surveymeans data="SASdatasetname";
  strata    A_STRATA;
  cluster   A_PSU;
  weight    Wgt1_Partifnl;
  var      B24_i;
```

Analysis Variable of E37 (number of participants with ticket  
assigned to an Employment Network in 2003).

### **SUDAAN EXAMPLE**

```
proc descript data="SASdatasetname" filetype=sas design=wr;
  nest      A_STRATA A_PSU / missunit;
  weight    Wgt1_Partifnl;
  var      "E37" ;
  print nsum wsum mean semean deffmean / style=nchs
  wsumfmt=f10.0 meanfmt=f8.4 semeanfmt=f8.4 deffmeanfmt=f8.4;
  title "TTW Cross-Sectional Participant National Estimates";
```

### **SAS EXAMPLE**

```
proc surveymeans data="SASdatasetname";
  strata    A_STRATA;
  cluster   A_PSU;
  weight    Wgt1_Partifnl;
  var      E37;
```

## Weight Variables

Participant sample: Wgt1\_Partifinl

### A\_STRATA

1. Clustered samples for both beneficiaries and participants
  - a. A\_STRATA = 100 for PSUs in Phase 1 states
  - b. A\_STRATA = 200 for PSUs in Phase 2 states
  - c. A\_STRATA = 300 for PSUs in Phase 3 states
3. Unclustered samples for participants requiring unclustered sample
  - a. A\_STRATA = 111 Outcome-only participants in PSUs in Phase 1 states
  - b. A\_STRATA = 112 Outcome-only participants not in PSUs in Phase 1 states

### A\_PSU

1. Clustered samples for both beneficiaries and participants  
A\_PSU = PSU identifier
2. Unclustered samples for participants requiring unclustered sample  
A\_PSU = MPR\_ID for Outcome-only participants

### Notes:

1. Before each SUDAAN procedure, sort by A\_STRATA and A\_PSU. Sorting is not necessary in SAS.
2. Use SUDAAN's SUBPOPN statement to define subpopulation for which estimates are wanted. For example, for estimates of SSI participant subpopulation, use SUBPOPN to define SSI participants. In SAS, you must use the DOMAIN statement to identify subpopulations of interest. For example, suppose the variable BENETYPE indicates the type of beneficiary, with 3 levels: SSI, SSDI, and both SSI and SSDI. If you want an estimate involving the subpopulation of all SSI beneficiaries, then you would need to create a second variable, BENETYPE2, combining the two relevant levels of BENETYPE, then use DOMAIN with the BENETYPE2 variable to obtain the needed estimate.
